Change History

Issue 08 (2021-10-18)

This is the 08 version.

Compared to last version, the following topic is changed.

| Section | Change Description |
|---------|--|
| 14.2 | Added the description of PCIe registers. |

Issue 07 (2020-06-29)

This is the 07 version.

Compared to last version, the following topic is changed.

| Section | Change Description |
|---------|---|
| 2.2 | Updated the description of CPU Sub-system. |
| 2.2 | Modified the specification version supported by eMMC and MMC card interface to 5.0 HS400. |

Issue 06 (2020-05-15)

This is the 06 version.

Compared to last version, the following topic is changed.

| Section | Change Description |
|---------|--|
| 11.9.1 | Updated PDM registers. |
| 4.5.2 | Added a note explaining "OD 5V". |
| 4.2 | Updated the minimum voltage of VDD_EE. Added a note about the voltage of VDD_DDR. |

Issue 05 (2020-02-28)

This is the 05 version.

Compared to last version, updated HDCP 2.2 to HDCP 2.2/2.3.

Issue 04 (2019-09-10)

This is the 04 version.

Compared to last version, the following topics are changed.

| Section | Change Description |
|----------|---------------------------------|
| 2.1, 2.2 | Updated description of the NPU. |
| 8.6.1 | Added specs of the NPU. |

Issue 03 (2019-08-07)

This is the 03 version.

Compared to last version, the following topics are changed.

| Section | Change Description |
|-------------|---|
| 2.2 | Updated the frequency spec of DDR4. |
| 2.2 and 8.6 | Changed spec and feature description of neural network accelerator. |

Issue 02 (2019-07-17)

This is the 02 version.

Compared to last version, the following topics are changed.

| Section | Change Description |
|------------------|--|
| 2.1, 2.2 and 8.5 | Updated Vulkan 1.0 to Vulkan 1.1. Modified Mali-G52 MP6 to Mali-G52 MP4 (6EE) |
| 2.2 | Updated the figure. |

Issue 01 (2019-05-05)

This is the 01 version.

Compared to *A311D Datasheet (0.1)*, the following topics are changed.

| Section | Change Description |
|----------|--|
| 3.3 | Added a note that some GPIOAO pins can be reset by watchdog. |
| 4 | Modified the chapter title. |
| 4.3 | Added a note of ripple voltage after the table |
| 4.4 | Modified thermo resistance value. |
| 4.5.1 | Added two notes of min and max value of R_{PD} explaining the GPIO pin voltage in test condition. |
| 4.7.1 | Added note after Table 4-2 that driving strength of OD pin is not adjustable. |
| 4.7.7 | <ul style="list-style-type: none"> ● Modified the specs of tHC, tLC and tRC in Table 4-14 and Table 4-15 ● Updated timing figures from Figure 4-16 to Figure 4-19. |
| 5 and 6 | Changed these two sections into chapters. |
| 6 | Updated the power on sequence figure. |
| 7 | Updated the dimension figure. |
| 14.2 | Removed spec of PCIE. |
| 14.3.3.2 | Modified register description of ETH_PHY_CNTL1. |
| 14.6.3 | Corrected a typo. |

| 13.3 | eMMC/SD | 1314 |
| 13.3.1 | Overview | 1314 |
| 13.3.2 | PinDescription..... | 1314 |
| 13.3.3 | eMMC/SD Mode | 1314 |
| 13.3.4 | Clock | 1315 |
| 13.3.5 | Descriptor..... | 1316 |
| 13.3.6 | RegisterDescription..... | 1319 |
| 13.4 | Serial Peripheral Interface Communication Controller..... | 1330 |
| 13.4.1 | Overview | 1330 |
| 13.4.2 | Features | 1330 |
| 13.4.3 | FunctionalDescription | 1330 |
| 13.4.4 | RegisterDescription..... | 1331 |
| 13.5 | Serial Peripheral Interface Flash Controller | 1338 |
| 13.5.1 | Overview | 1338 |
| 13.5.2 | Features | 1338 |

| | | |
|--------|---|------|
| 13.5.3 | RegisterDescription..... | 1338 |
| 14. | I/O Interface | 1350 |
| 14.1 | Universal Serial Bus | 1351 |
| 14.1.1 | Overview | 1351 |
| 14.1.2 | Features | 1351 |
| 14.1.3 | RegisterDescription..... | 1351 |
| 14.2 | PCIE | 1362 |
| 14.2.1 | Overview | 1362 |
| 14.2.2 | Register Description..... | 1362 |
| 14.3 | Ethernet | 1371 |
| 14.3.1 | Overview | 1371 |
| 14.3.2 | Ethernet MAC | 1371 |
| 14.3.3 | Ethernet PHY | 1373 |
| 14.4 | Inter-Integrated Circuit (I2C)..... | 1380 |
| 14.4.1 | Overview | 1380 |
| 14.4.2 | Features | 1380 |
| 14.4.3 | RegisterDescription..... | 1380 |
| 14.5 | Universal Asynchronous Receiver And Transmitter | 1390 |
| 14.5.1 | Overview | 1390 |
| 14.5.2 | Features | 1390 |
| 14.5.3 | FunctionalDescription | 1391 |
| 14.5.4 | RegisterDescription..... | 1391 |
| 14.6 | Infrared Remote..... | 1395 |
| 14.6.1 | Overview | 1395 |
| 14.6.2 | IR Demodulation | 1395 |
| 14.6.3 | Legacy IR Control | 1397 |
| 14.6.4 | Multi Format IR Control..... | 1398 |
| 14.6.5 | RegisterDescription..... | 1399 |
| 14.7 | Pulse-Width Modulation | 1413 |
| 14.7.1 | Overview | 1413 |
| 14.7.2 | RegisterDescription..... | 1414 |
| 14.8 | SAR ADC..... | 1422 |
| 14.8.1 | Overview | 1422 |
| 14.8.2 | RegisterDescription..... | 1422 |
| 15. | System Interface..... | 1431 |
| 15.1 | JTAG..... | 1431 |
| 15.1.1 | Overview | 1431 |
| 15.1.2 | RegisterDescription..... | 1431 |

| | | |
|--------|--------------------------|------|
| 15.2 | Temp Sensor | 1435 |

1. About This Documentation

1.1 Documentation Overview

This documentation is an overall description of Amlogic advanced AI application processor A311D designed for hybrid OTT/IP Set Top Box(STB) and high-end media box applications, providing programmers instructions from the following aspects: system, video path, audio path, memory interfaces, I/O interfaces and system interfaces.

1.2 Acronyms and Abbreviations

Table 1-1 Acronyms and Abbreviations

| A | | |
|------|---|--|
| AHB | AMBA High-speed Bus | A bus protocol designed for the connection and management of functional blocks in system-on-a-chip (SoC) designs |
| APB | Advanced Peripheral Bus | A bus protocol designed for low bandwidth control accesses |
| D | | |
| DMAC | Direct Memory Access Controller | An engine connected to the DDR controller for the purposes of moving data to/from DDR memory. |
| DMC | DDR memory controller | An engine controls DDR |
| E | | |
| eMMC | Embedded multimedia card | An architecture consisting of an embedded storage solution with MMC interface, flash memory and controller |
| H | | |
| HDMI | High-Definition Multimediaman Interface | A compact audio/video interface used for transmitting uncompressed digital data |
| I | | |
| I2C | Inter-Integrated Circuit | An multi-master, multi-slave, single-ended, serial computer bus used for attaching lower-speed peripheral ICs to processors and microcontrollers. |
| I2S | Inter IC sound | An electrical serial bus interface stand used for connecting digital audio device together |
| P | | |
| PCM | Pulse Code Modulation | A method used to digitally represent sampled analog signals |
| PDM | Pulse Density Modulation | A mothed used to represent an analog signal with digital signal |
| S | | |
| SPI | Synchronous Peripheral Interface | A synchronous serial data link standard operating in sull duplex mode, devices communicate in master/slave mode where the master device initiates the date frame |

2. General Information

2.1 Overview

A311D is an advanced AI application processor designed for hybrid OTT/IP Set Top Box(STB) and high-end media box applications. It integrates a powerful CPU, GPU and NPU ^{optional} (Neural Processing Unit) subsystem, a secured 4K video CODEC engine and a best-in-class HDR image processing pipeline with all major peripherals to form the ultimate high-performance AI multimedia AP.

The main system CPU is based on Big.Little architecture which integrates a quad-core ARM Cortex-A73 CPU cluster and a dual-core Cortex-A53 cluster with united L2 cache to improve system performance. Each CPU core includes the separate NEON SIMD co-processor to improve software media processing capability. There is also the NPU supporting INT8 inference for all popular deep learning frameworks including TensorFlow and Caffe.

The graphic subsystem consists of two graphic engines and a flexible video/graphic output pipeline. The ARM Mali™-G52 MP4(6EE) GPU handles all OpenGL ES 3.2 Vulkan 1.1 and OpenCL 2.0 graphic programs, while the 2.5D graphics processor handles additional scaling, alpha, rotation and color space conversion operations. Together, the CPU and GPU handle all operating system, networking, user-interface and gaming related tasks. The video output pipeline includes Dolby Vision ^{optional}, advanced HDR10, HDR10+, HLG and PRIME HDR processing, REC709/BT2020 processing, motion adaptive edge enhancing de-interlacing, flexible programmable scalar, and many picture enhancement filters before passing the enhanced image to the video output ports.

Amlogic Video Engine (AVE-10) offloads the Cortex-A53 CPUs from all video CODEC processing. It includes dedicated hardware video decoder and encoder. AVE-10 is capable of decoding 4Kx2K resolution video at 75fps with complete Trusted Video Path (TVP) for secure applications and supports full formats including MVC, MPEG-1/2/4, VC-1/WMV, AVS, AVS+, AVS2 RealVideo, MJPEG streams, H.264, H265-10, VP9 and also JPEG pictures with no size limitation. The independent encoder is able to encode in JPEG or H.265 up to 1080p at 60fps, and H.264 up to 1080p at 30fps.

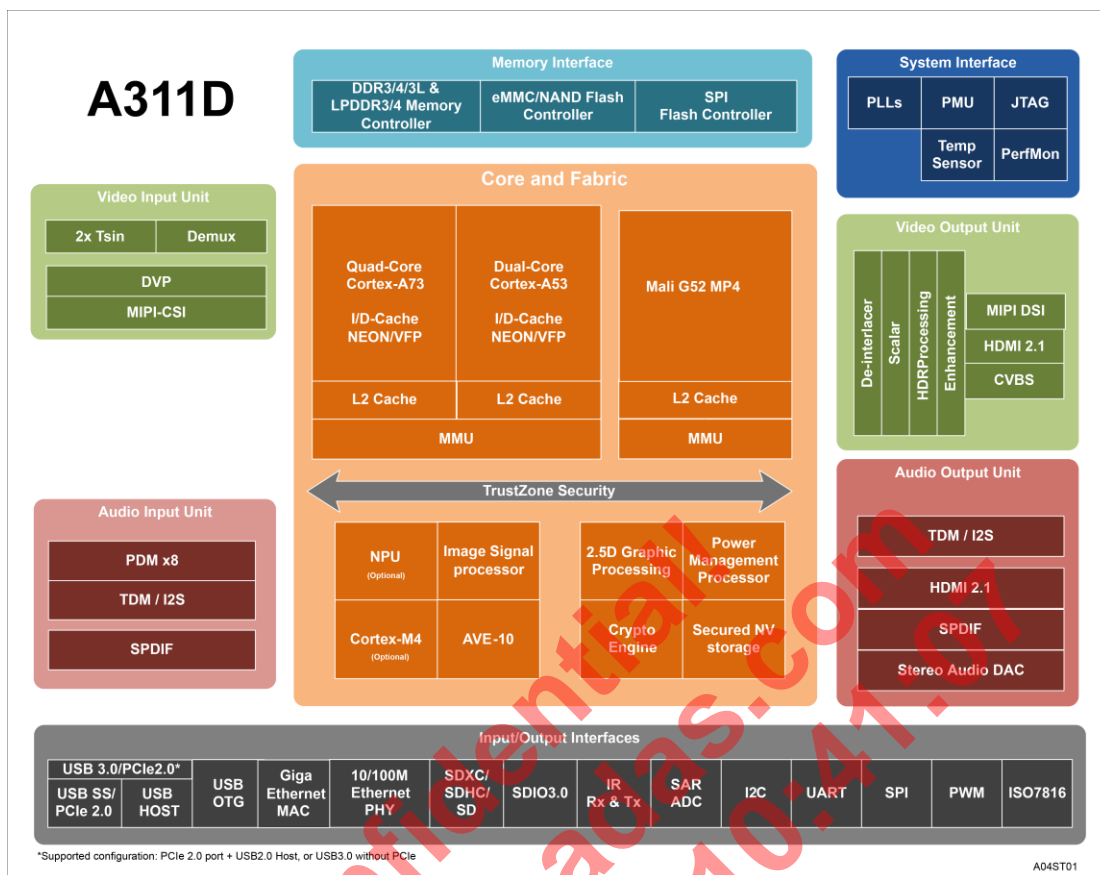

A311D integrates all standard audio/video input/output interfaces including a HDMI2.1 transmitter with 3D, Dynamic HDR, CEC and HDCP 2.2/2.3 support, stereo audio DAC, a CVBS output, 4-lane MIPI DSI interface, multiple TDM, PCM, I2S and SPDIF digital audio input/output interfaces, and 8 channel far-field PDM digital microphone (DMIC) inputs. A 4-lane MIPI-CSI and DVP interface is available to support up to 8MP camera input with the built-in high-quality ISP.

A311D also integrates a set of functional blocks for digital TV broadcasting streams. The built-in two demux can process the TV streams from the serial and parallel transport stream input interface, which can connect to external tuner/demodulator.

The processor has rich advanced network and peripheral interfaces, including a 10/100/1000M Ethernet MAC with RGMII, 10/100M Ethernet PHY, one USB XHCI OTG 2.0 ports, one USB3.0 and PCIe 2.0 combo interface and multiple SDIO/SD card controllers, UART, I2C, high-speed SPI and PWMs.

Standard development environment utilizing GNU/GCC Android tool chain is supported. Please contact your AMLOGIC sales representative for more information.

2.2 Features

CPU Sub-system

- Quad core ARM Cortex-A73 and dual core ARM Cortex-A53 CPU
- ARMv8-A architecture with Neon and Crypto extensions
- Unified system L2 cache
- Build-in Cortex-M3 core for system control processing
- Build-in Cortex-M4^{Optional} core for system control processing
- Advanced TrustZone security system
- Application based traffic optimization using internal QoS-based switching fabrics

NPU

- Neural network accelerator (NNA) with programmable engine (PPU) architecture
- 4 NNA with INT8 inference performance up to 5Tops
- 1 programmable processing unit (PPU) up to 12.8 GFLOPS FP16 or 6.4 GFLOPS FP32
- 512KB cache and 1MB on chip buffer

3D Graphics Processing Unit

- ARM G52 MP4(6EE) GPU
- 8-wide warps, 2x dual texture pipe, 6x 8-wide execution engines (EE)
- Concurrent multi-core processing
- OpenGL ES 3.2, Vulkan 1.1 and OpenCL 2.0 support

2.5D Graphics Processor

- Fast bitblt engine with dual inputs and single output
- Programmable raster operations (ROP)
- Programmable polyphase scaling filter
- Supports multiple video formats 4:2:0, 4:2:2 and 4:4:4 and multiple pixel formats (8/16/24/32 bits graphics layer)
- Fast color space conversion
- Advanced anti-flickering filter

Crypto Engine

- AES/ block cipher with 128/256 bits keys, standard 16 bytes block size and streaming ECB, CBC and CTR modes
- TDES block cipher with ECB and CBC modes supporting 64 bits key for DES and 192 bits key for 3DES
- Hardware crypto key-ladder operation and DVB-CSA for transport stream encryption
- Built-in hardware True Random Number Generator (TRNG), CRC and SHA-1/SHA-2/HMAC SHA engine

Video/Picture CODEC

- Amlogic Video Engine (AVE) with dedicated hardware decoders and encoders
- Support multi-video decoder up to 4Kx2K@60fps+1x1080P@60fps
- Supports multiple “secured” video decoding sessions and simultaneous decoding and encoding
- Video/Picture Decoding
 - VP9 Profile-2 up to 4Kx2K@60fps
 - H.265 HEVC MP-10@L5.1 up to 4Kx2K@60fps
 - AVS2-P2 Profile up to 4Kx2K@60fps
 - H.264 AVC HP@L5.1 up to 4Kx2K@30fps
 - H.264 MVC up to 1080P@60fps
 - MPEG-4 ASP@L5 up to 1080P@60fps (ISO-14496)
 - WMV/VC-1 SP/MP/AP up to 1080P@60fps
 - AVS-P16(AVS+) /AVS-P2 JiZhun Profile up to 1080P@60fps
 - MPEG-2 MP/HL up to 1080P@60fps (ISO-13818)
 - MPEG-1 MP/HL up to 1080P@60fps (ISO-11172)
 - RealVideo 8/9/10 up to 1080P@60fps
 - Multiple language and multiple format sub-title video support
 - MJPEG and JPEG unlimited pixel resolution decoding (ISO/IEC-10918)
 - Supports JPEG thumbnail, scaling, rotation and transition effects
 - Supports *.mkv, *.wmv, *.mpg, *.mpeg, *.dat, *.avi, *.mov, *.iso, *.mp4, *.rm and *.jpg file formats
- Video/Picture Encoding
 - Independent JPEG and H.265/H.264 encoder with configurable performance/bit-rate
 - JPEG image encoding
 - H.265 video encoding up to 1080P@60fps with low latency
 - H.264 video encoding up to 1080P@30fps with low latency
 - DVP (ITU 601/656) camera interface
 - Supports YUV or RGB camera input formats

9th Generation Advanced Amlogic TruLife Image Engine

- Supports Dolby Vision^{Optional}, HDR10, HDR10+, and HLG HDR

- Motion compensated noise reduction and 3D digital noise reduction for random noise
- Block noise, mosquito noise, spatial noise, contour noise reduction
- Motion compensated and motion adaptive de-interlacer
- Edge interpolation with low angle protection and processing
- 3:2/2:2 pulldown and Video on Film (VOF) detection and processing
- Smart sharpness with SuperScaler technology including de-contouring, de-ring, LTI, CTI, de-jaggy, peaking
- Dynamic non-Linear contrast enhancement
- 3D LUTs with 17x17x17 nodes, provide 4913 different control points, which is competent for matching calibrated displays to a target colorspace
- High precision HSL color space-based color management with low saturation protection, independent luma/hue/saturation adjustment to achieve blue/green extension, fresh tone correction, and wider gamut for video
- 2 video planes and 3 graphics planes
- Independent HDR re-mapping of video and graphic layer

Camera Interface

- DVP parallel and MIPI-CSI camera interface with 4 lanes
- Supports RAW, YUV or RGB camera input formats
- Built-in 8MP HDR Image Signal Processor (ISP)
- Built-in image distortion correction engine

Video Output

- Built-in HDMI 2.1 transmitter including both controller and PHY with CEC, Dynamic HDR and HDCP 2.2/2.3, 4Kx2K@60 max resolution output
- CVBS 480i/576i standard definition output
- Supports all standard SD/HD/FHD video output formats: 480i/p, 576i/p, 720p, 1080i/p and 4Kx2K
- 4-lane MIPI DSI interface, resolution up to 1920*1080 with rotation and panel calibration

Audio Decoder and Input/Output

- Supports MP3, AAC, WMA, RM, FLAC, Ogg, Dolby Audio ^{optional}, DTS ^{optional} and programmable with 7.1/5.1 down-mixing
- Built-in serial digital audio SPDIF/IEC958 input/output and PCM input/output
- 3 built-in TDM/PCM/I2S ports with TDM/PCM mode up to 384kHz x32bits x 8ch or 96kHz x 32bits x 32ch and I2S mode up to 384kHz x 32bits x 8ch
- Digital microphone PDM voice input with programmable CIC, LPF & HPF, support up to 8 DMICs
- Built-in stereo audio DAC
- Supports concurrent dual audio stereo channel output with combination of analog+PCM or I2S+PCM

Memory and Storage Interface

- 32-bit DRAM memory interface with dual ranks and max 4GB total address space
- Compatible with JEDEC standard DDR3-2133 /DDR3L-2133 /DDR4-3200 /LPDDR3-2133 /LPDDR4-3200 SDRAM
- Supports SLC/MLC/TLC NAND Flash with 60-bit ECC, compatible to Toshiba toggle mode in addition to ONFI 2.2
- SDSC/SDHC/SDXC card and SDIO interface with 1-bit and 4-bit data bus width supporting spec version 2.x/3.x/4.x DS/HS modes up to UHS-I SDR104

- eMMC and MMC card interface with 1/4/8-bit data bus width fully supporting spec version 5.0 HS400
- Supports serial 1, 2 or 4-bit NOR Flash via SPI interface
- Built-in 4k bits One-Time-Programming memory for key storage

Network

- Integrated IEEE 802.3 10/100/1000M Ethernet MAC with RGMII interface
- Integrated 10^{Note1}/100M Ethernet PHY interface
- WiFi/IEEE802.11 & Bluetooth supporting via PCIE/SDIO /USB/UART/PCM
- Network interface optimized for mixed WIFI and BT traffic

Digital Television Interface

- One serial and one parallel Transport stream (TS) input interface with built-in demux processor for connecting to external digital TV tuner/demodulator
- Built-in PWM, I2C and SPI interfaces to control tuner and demodulator
- Integrated ISO 7816 smart card controller

Integrated I/O Controllers and Interfaces

- One USB XHCI OTG 2.0 port
- One USB SS and PCIe 2.0 combo interface up to 5Gbps, supporting 2 configurations:
 - 1 USB 2.0 Host + 1 PCIe
 - 1 USB3.0 (No PCIe)
- Multiple PWM, UART, I2C and SPI interface with slave select
- Programmable IR remote input/output controllers
- Built-in 10bit SAR ADC with 4 input channels
- A set of General Purpose IOs with built-in pull up and pull down

System, Peripherals and Misc. Interfaces

- Integrated general purpose timers, counters, DMA controllers
- 24 MHz crystal input
- Embedded debug interface using ICE/JTAG

Power Management

- Multiple internal power domains controlled by software
- Multiple sleep modes for CPU, system, DRAM, etc.
- Multiple internal PLLs to adjust the operating frequencies
- Multi-voltage I/O design for 1.8V and 3.3V
- Power management auxiliary processor in a dedicated always-on (AO) power domain for system stand-by

Security

- Trustzone based Trusted Execution Environment (TEE)
- Secured boot, encrypted OTP, encrypted DRAM with memory integrity checker, hardware key ladder and internal control buses and storage
- Separated secure/non-secure Entropy true RNG
- Pre-region/ID memory security control and electric fence
- Hardware based Trusted Video Path (TVP), video watermarking and secured contents (needs SecureOS software)
- Secured IO and secured clock

Package

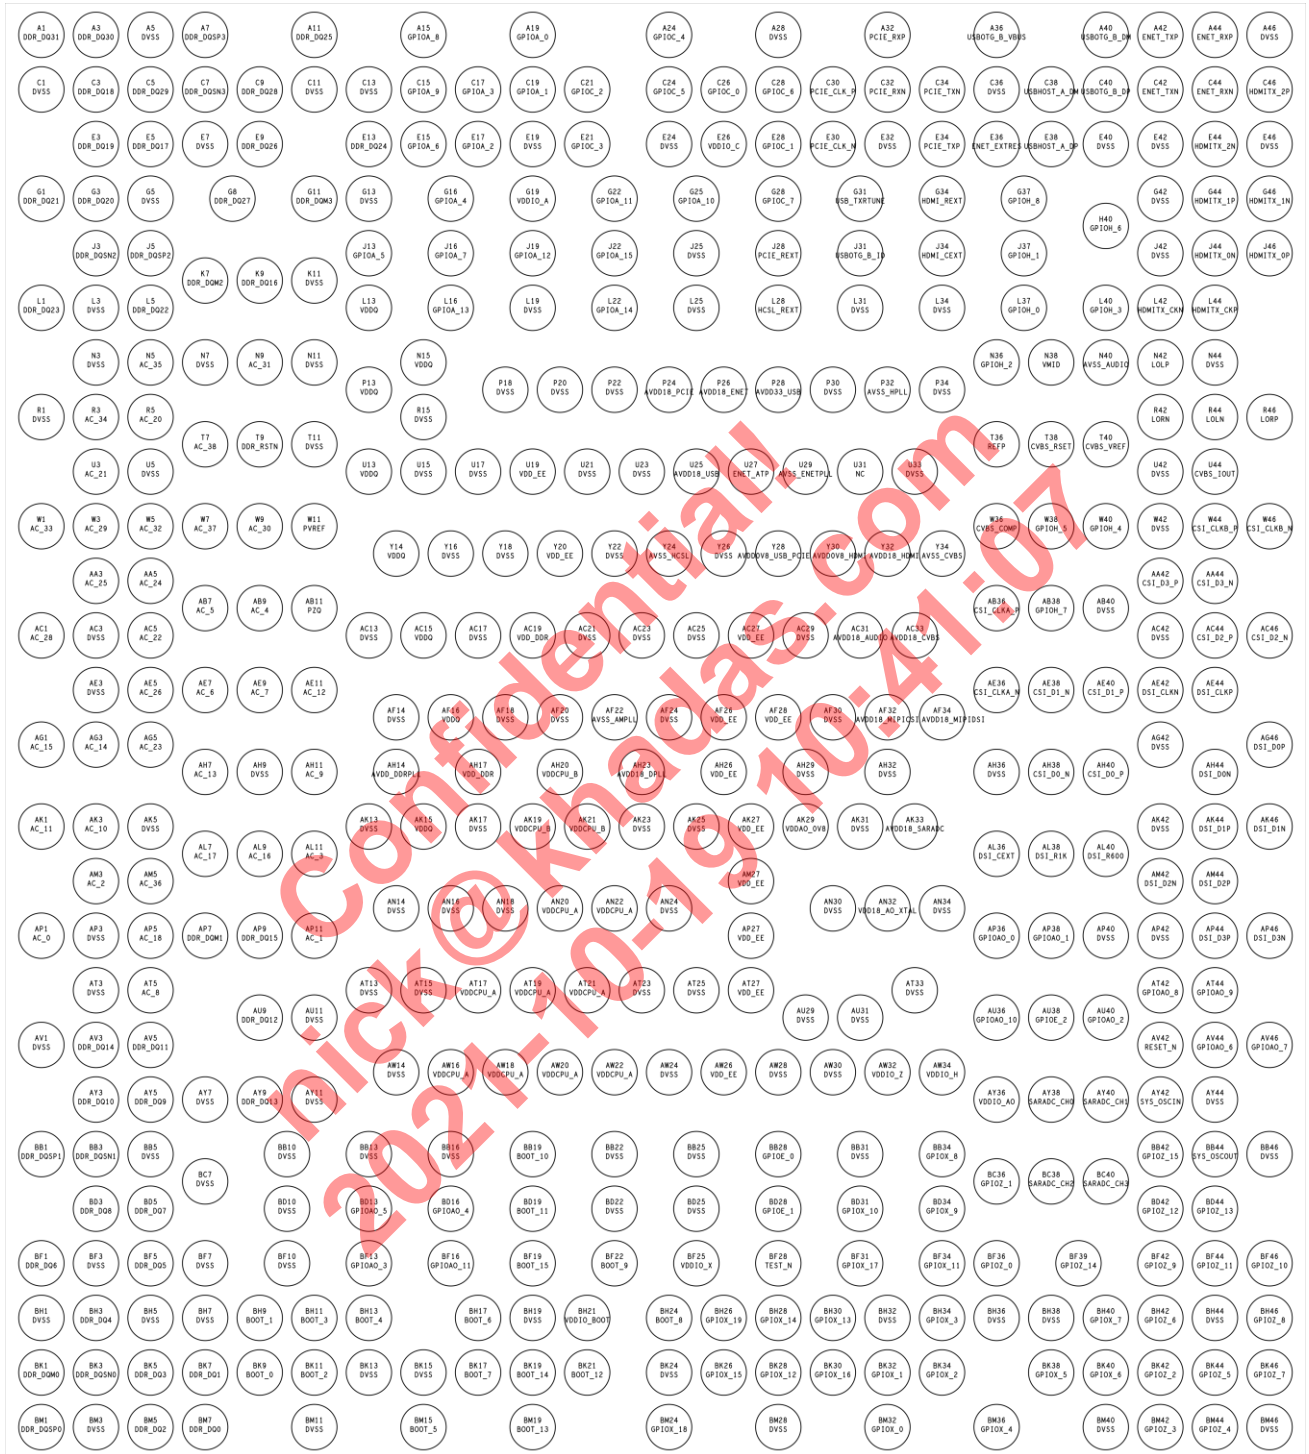

- FCBGA, 16.1mmx14.3mm, 0.6mm ball pitch, RoHS compliant

Note1: 10Base-T not support CTS mode

3.3 Pin Description

The A311D application processor pin assignment is described in the following table.

Table 3-2. Pin Name assignments

| Net Name | Type | Default Pull UP/DN | Description | Power Domain | If Unused |
|---|---------|--------------------|---|--------------|-----------|
| GPIOZ - Refer to Table 3-3 for functional multiplex information. | | | | | |
| GPIOZ_0 | DIO | Up | General purpose input/output bank Z signal 0 | VDDIO_Z | NC |
| GPIOZ_1 | DIO | Up | General purpose input/output bank Z signal 1 | VDDIO_Z | NC |
| GPIOZ_2 | DIO | Up | General purpose input/output bank Z signal 2 | VDDIO_Z | NC |
| GPIOZ_3 | DIO | Up | General purpose input/output bank Z signal 3 | VDDIO_Z | NC |
| GPIOZ_4 | DIO | Up | General purpose input/output bank Z signal 4 | VDDIO_Z | NC |
| GPIOZ_5 | DIO | Up | General purpose input/output bank Z signal 5 | VDDIO_Z | NC |
| GPIOZ_6 | DIO | Up | General purpose input/output bank Z signal 6 | VDDIO_Z | NC |
| GPIOZ_7 | DIO | Up | General purpose input/output bank Z signal 7 | VDDIO_Z | NC |
| GPIOZ_8 | DIO | Up | General purpose input/output bank Z signal 8 | VDDIO_Z | NC |
| GPIOZ_9 | DIO | Down | General purpose input/output bank Z signal 9 | VDDIO_Z | NC |
| GPIOZ_10 | DIO | Down | General purpose input/output bank Z signal 10 | VDDIO_Z | NC |
| GPIOZ_11 | DIO | Down | General purpose input/output bank Z signal 11 | VDDIO_Z | NC |
| GPIOZ_12 | DIO | Down | General purpose input/output bank Z signal 12 | VDDIO_Z | NC |
| GPIOZ_13 | DIO | Down | General purpose input/output bank Z signal 13 | VDDIO_Z | NC |
| GPIOZ_14 | OD 3.3V | Z | OD input/output bank Z signal 14 | VDDIO_Z | NC |
| GPIOZ_15 | OD 3.3V | Z | OD input/output bank Z signal 15 | VDDIO_Z | NC |

| Net Name | Type | Default Pull UP/DN | Description | Power Domain | If Unused |
|---|------|--------------------|---|--------------|-----------|
| VDDIO_Z | P | - | Power supply for GPIO bank Z | - | NC |
| GPIOA - Refer to Table 3-4 for functional multiplex information. | | | | | |
| GPIOA_0 | DIO | Down | General purpose input/output bank A signal 0 | VDDIO_A | NC |
| GPIOA_1 | DIO | Down | General purpose input/output bank A signal 1 | VDDIO_A | NC |
| GPIOA_2 | DIO | Down | General purpose input/output bank A signal 2 | VDDIO_A | NC |
| GPIOA_3 | DIO | Down | General purpose input/output bank A signal 3 | VDDIO_A | NC |
| GPIOA_4 | DIO | Down | General purpose input/output bank A signal 4 | VDDIO_A | NC |
| GPIOA_5 | DIO | Down | General purpose input/output bank A signal 5 | VDDIO_A | NC |
| GPIOA_6 | DIO | Down | General purpose input/output bank A signal 6 | VDDIO_A | NC |
| GPIOA_7 | DIO | Down | General purpose input/output bank A signal 7 | VDDIO_A | NC |
| GPIOA_8 | DIO | Down | General purpose input/output bank A signal 8 | VDDIO_A | NC |
| GPIOA_9 | DIO | Down | General purpose input/output bank A signal 9 | VDDIO_A | NC |
| GPIOA_10 | DIO | Down | General purpose input/output bank A signal 10 | VDDIO_A | NC |
| GPIOA_11 | DIO | Down | General purpose input/output bank A signal 11 | VDDIO_A | NC |
| GPIOA_12 | DIO | Down | General purpose input/output bank A signal 12 | VDDIO_A | NC |
| GPIOA_13 | DIO | Down | General purpose input/output bank A signal 13 | VDDIO_A | NC |
| GPIOA_14 | DIO | Up | General purpose input/output bank A signal 14 | VDDIO_A | NC |
| GPIOA_15 | DIO | Up | General purpose input/output bank A signal 15 | VDDIO_A | NC |
| VDDIO_A | P | - | Power supply for GPIO bank A | - | NC |
| BOOT - Refer to Table 3-5 for functional multiplex information. | | | | | |

| Net Name | Type | Default Pull UP/DN | Description | Power Domain | If Unused |
|---|------|--------------------|--|--------------|---------------|
| BOOT_0 | DIO | UP | General purpose input/output bank BOOT signal 0 | VDDIO_BOOT | NC |
| BOOT_1 | DIO | UP | General purpose input/output bank BOOT signal 1 | VDDIO_BOOT | NC |
| BOOT_2 | DIO | UP | General purpose input/output bank BOOT signal 2 | VDDIO_BOOT | NC |
| BOOT_3 | DIO | UP | General purpose input/output bank BOOT signal 3 | VDDIO_BOOT | NC |
| BOOT_4 | DIO | UP | General purpose input/output bank BOOT signal 4 | VDDIO_BOOT | NC |
| BOOT_5 | DIO | UP | General purpose input/output bank BOOT signal 5 | VDDIO_BOOT | NC |
| BOOT_6 | DIO | UP | General purpose input/output bank BOOT signal 6 | VDDIO_BOOT | NC |
| BOOT_7 | DIO | UP | General purpose input/output bank BOOT signal 7 | VDDIO_BOOT | NC |
| BOOT_8 | DIO | UP | General purpose input/output bank BOOT signal 8 | VDDIO_BOOT | NC |
| BOOT_9 | DIO | UP | General purpose input/output bank BOOT signal 9 | VDDIO_BOOT | NC |
| BOOT_10 | DIO | UP | General purpose input/output bank BOOT signal 10 | VDDIO_BOOT | NC |
| BOOT_11 | DIO | UP | General purpose input/output bank BOOT signal 11 | VDDIO_BOOT | NC |
| BOOT_12 | DIO | DOWN | General purpose input/output bank BOOT signal 12 | VDDIO_BOOT | NC |
| BOOT_13 | DIO | DOWN | General purpose input/output bank BOOT signal 13 | VDDIO_BOOT | NC |
| BOOT_14 | DIO | UP | General purpose input/output bank BOOT signal 14 | VDDIO_BOOT | NC |
| BOOT_15 | DIO | UP | General purpose input/output bank BOOT signal 15 | VDDIO_BOOT | NC |
| VDDIO_BOOT | P | - | Power supply for GPIO bank BOOT | - | To VDDIO_BOOT |
| GPIOC - Refer to Table 3-6 for functional multiplex information. | | | | | |
| GPIOC_0 | DIO | UP | General purpose input/output bank C signal 0 | VDDIO_C | NC |

| Net Name | Type | Default Pull UP/DN | Description | Power Domain | If Unused |
|---|--------|--------------------|--|--------------|-----------|
| GPIOC_1 | DIO | UP | General purpose input/output bank C signal 1 | VDDIO_C | NC |
| GPIOC_2 | DIO | UP | General purpose input/output bank C signal 2 | VDDIO_C | NC |
| GPIOC_3 | DIO | UP | General purpose input/output bank C signal 3 | VDDIO_C | NC |
| GPIOC_4 | DIO | UP | General purpose input/output bank C signal 4 | VDDIO_C | NC |
| GPIOC_5 | DIO | UP | General purpose input/output bank C signal 5 | VDDIO_C | NC |
| GPIOC_6 | DIO | UP | General purpose input/output bank C signal 6 | VDDIO_C | NC |
| GPIOC_7 | OD3.3V | Z | OD input/output bank C signal 7 | VDDIO_C | NC |
| VDDIO_C | P | - | Power supply for GPIO bank C | - | NC |
| GPIOX - Refer to Table 3-7 for functional multiplex information. | | | | | |
| GPIOX_0 | DIO | Up | General purpose input/output bank X signal 0 | VDDIO_X | NC |
| GPIOX_1 | DIO | Up | General purpose input/output bank X signal 1 | VDDIO_X | NC |
| GPIOX_2 | DIO | Up | General purpose input/output bank X signal 2 | VDDIO_X | NC |
| GPIOX_3 | DIO | Up | General purpose input/output bank X signal 3 | VDDIO_X | NC |
| GPIOX_4 | DIO | Up | General purpose input/output bank X signal 4 | VDDIO_X | NC |
| GPIOX_5 | DIO | Up | General purpose input/output bank X signal 5 | VDDIO_X | NC |
| GPIOX_6 | DIO | Down | General purpose input/output bank X signal 6 | VDDIO_X | NC |
| GPIOX_7 | DIO | Up | General purpose input/output bank X signal 7 | VDDIO_X | NC |
| GPIOX_8 | DIO | Up | General purpose input/output bank X signal 8 | VDDIO_X | NC |
| GPIOX_9 | DIO | Up | General purpose input/output bank X signal 9 | VDDIO_X | NC |

| Net Name | Type | Default Pull UP/DN | Description | Power Domain | If Unused |
|---|------|--------------------|---|--------------|-----------|
| GPIOX_10 | DIO | Up | General purpose input/output bank X signal 10 | VDDIO_X | NC |
| GPIOX_11 | DIO | Up | General purpose input/output bank X signal 11 | VDDIO_X | NC |
| GPIOX_12 | DIO | Up | General purpose input/output bank X signal 12 | VDDIO_X | NC |
| GPIOX_13 | DIO | Up | General purpose input/output bank X signal 13 | VDDIO_X | NC |
| GPIOX_14 | DIO | Up | General purpose input/output bank X signal 14 | VDDIO_X | NC |
| GPIOX_15 | DIO | Up | General purpose input/output bank X signal 15 | VDDIO_X | NC |
| GPIOX_16 | DIO | Up | General purpose input/output bank X signal 16 | VDDIO_X | NC |
| GPIOX_17 | DIO | Down | General purpose input/output bank X signal 17 | VDDIO_X | NC |
| GPIOX_18 | DIO | Up | General purpose input/output bank X signal 18 | VDDIO_X | NC |
| GPIOX_19 | DIO | Z | General purpose input/output bank X signal 19 | VDDIO_X | NC |
| VDDIO_X | P | - | Power supply for GPIO bank X | - | NC |
| GPIOH - Refer to Table 3-8 for functional multiplex information. | | | | | |
| GPIOH_0 | OD5V | Z | OD input/output bank H signal 0 | VDDIO_H | NC |
| GPIOH_1 | OD5V | Z | OD input/output bank H signal 1 | VDDIO_H | NC |
| GPIOH_2 | OD5V | Z | OD input/output bank H signal 2 | VDDIO_H | NC |
| GPIOH_3 | OD5V | Z | OD input/output bank H signal 3 | VDDIO_H | NC |
| GPIOH_4 | DIO | DOWN | General purpose input/output bank H signal 4 | VDDIO_H | NC |
| GPIOH_5 | DIO | DOWN | General purpose input/output bank H signal 5 | VDDIO_H | NC |
| GPIOH_6 | DIO | DOWN | General purpose input/output bank H signal 6 | VDDIO_H | NC |

| Net Name | Type | Default Pull UP/DN | Description | Power Domain | If Unused |
|---|-------|--------------------|--|--------------|------------|
| GPIOH_7 | DIO | DOWN | General purpose input/output bank H signal 7 | VDDIO_H | NC |
| GPIOH_8 | OD5V | Z | OD input/output bank H signal 8 | VDDIO_H | NC |
| VDDIO_H | P | - | Power supply for GPIO bank H | - | NC |
| <p>GPIOAO - Refer to Table 3-9 for functional multiplex information.</p> <p>The following pins can be reset by watchdog: GPIOAO_0, GPIOAO_1, GPIOAO_2, GPIOAO_4, GPIOAO_6, GPIOAO_7, GPIOAO_10, TEST_N (only output reg and pull up/down).</p> | | | | | |
| GPIOAO_0 | DIO | Up | General purpose input/output bank AO signal 0 | VDDIO_AO | NC |
| GPIOAO_1 | DIO | Up | General purpose input/output bank AO signal 1 | VDDIO_AO | NC |
| GPIOAO_2 | DIO | Down | General purpose input/output bank AO signal 2 | VDDIO_AO | NC |
| GPIOAO_3 | DIO | Up | General purpose input/output bank AO signal 3 | VDDIO_AO | NC |
| GPIOAO_4 | DIO | Down | General purpose input/output bank AO signal 4 | VDDIO_AO | NC |
| GPIOAO_5 | DIO | Up | General purpose input/output bank AO signal 5 | VDDIO_AO | NC |
| GPIOAO_6 | DIO | Down | General purpose input/output bank AO signal 6 | VDDIO_AO | NC |
| GPIOAO_7 | DIO | Up | General purpose input/output bank AO signal 7 | VDDIO_AO | NC |
| GPIOAO_8 | DIO | Up | General purpose input/output bank AO signal 8 | VDDIO_AO | NC |
| GPIOAO_9 | DIO | Down | General purpose input/output bank AO signal 9 | VDDIO_AO | NC |
| GPIOAO_10 | DIO | Up | General purpose input/output bank AO signal 10 | VDDIO_AO | NC |
| GPIOAO_11 | DIO | Down | General purpose input/output bank AO signal 11 | VDDIO_AO | NC |
| TEST_N | DIO | UP | SOC test pin and general purpose input/output bank AO signal 12. Should be pulled up during normal power-on. | VDDIO_AO | NC |
| RESET_N | Input | DOWN | System reset input | VDDIO_AO | To RESET_N |

| Net Name | Type | Default Pull UP/DN | Description | Power Domain | If Unused |
|---|------|--------------------|---|---------------|------------------|
| VDDIO_AO | P | - | Power supply for GPIO bank AO | VDDIO_AO | To VDDIO_AO |
| GPIOE- Refer to Table 3-10 for functional multiplex information. | | | | | |
| GPIOE_0 | DIO | Z | General purpose input/output bank E signal 0 | VDD18_AO_XTAL | NC |
| GPIOE_1 | DIO | Z | General purpose input/output bank E signal 1 | VDD18_AO_XTAL | NC |
| GPIOE_2 | DIO | Z | General purpose input/output bank E signal 2 | VDD18_AO_XTAL | NC |
| VDD18_AO_XTAL | P | - | Power supply for GPIO bank E and XTAL, IOVREF | - | To VDD18_AO_XTAL |
| SARADC | | | | | |
| SARADC_CH0 | AI | - | ADC channel 0 input | AVDD18_SARADC | NC |
| SARADC_CH1 | AI | - | ADC channel 1 input | AVDD18_SARADC | NC |
| SARADC_CH2 | AI | - | ADC channel 2 input | AVDD18_SARADC | NC |
| SARADC_CH3 | AI | - | ADC channel 3 input | AVDD18_SARADC | NC |
| AVDD18_SARADC | P | - | Analog power supply for SARADC | - | To 1.8V |
| CVBS OUT | | | | | |
| CVBS_COMP | A | - | CVBS external compensation capacitor connection | AVDD18_CVBS | NC |
| CVBS_IOUT | AO | - | Video DAC output | AVDD18_CVBS | NC |
| CVBS_RSET | A | - | CVBS output strength setting resistor | AVDD18_CVBS | NC |
| CVBS_VREF | A | - | CVBS reference voltage filter cap | AVDD18_CVBS | NC |
| AVDD18_CVBS | P | - | 1.8 V Analog power supply for CVBS_OUT | - | To 1.8V |
| HDMI TX | | | | | |
| HDMITX_0P | AO | - | HDMI TMDS data0 positive output | NC | NC |
| HDMITX_0N | AO | - | HDMI TMDS data0 negative output | NC | NC |
| HDMITX_1P | AO | - | HDMI TMDS data1 positive output | NC | NC |

| Net Name | Type | Default Pull UP/DN | Description | Power Domain | If Unused |
|--|------|--------------------|--|--------------|-----------|
| HDMITX_1N | AO | - | HDMI TMDS data1 negative output | NC | NC |
| HDMITX_2P | AO | - | HDMI TMDS data2 positive output | NC | NC |
| HDMITX_2N | AO | - | HDMI TMDS data2 negative output | NC | NC |
| HDMITX_CKP | AO | - | HDMI TMDS clock positive output | NC | NC |
| HDMITX_CKN | AO | - | HDMI TMDS clock negative output | NC | NC |
| HDMI_REXT | A | - | HDMI output strength setting resistor | HDMI_AVDD18 | NC |
| HDMI_CEXT | A | - | HDMI TX external filter cap | HDMI_AVDD18 | NC |
| AVDD18_HDMI | P | - | Analog power supply 1.8V for HDMI | - | To 1.8V |
| AVDD0V8_HDMI | P | - | Power supply 0.8V for HDMI | - | To VDD_EE |
| DRAM- Refer to Table 3-11 for functional multiplex information. | | | | | |
| AC_0 | DO | - | DDR PHY address/command/control signal bit 0 | VDDQ | NC |
| AC_1 | DO | - | DDR PHY address/command/control signal bit 1 | VDDQ | NC |

| CSI_D3_N | AI | - | MIPI CSI data 3 negative input | AVDD18_MIPICSI | NC |
| CSI_D3_P | AI | - | MIPI CSI data 3 positive input | AVDD18_MIPICSI | NC |
| CSI_CLKA_N | AI | - | MIPI CSI CLK negative input for channel A | AVDD18_MIPICSI | NC |
| CSI_CLKA_P | AI | - | MIPI CSI CLK positive input for channel A | AVDD18_MIPICSI | NC |
| CSI_CLKB_N | AI | - | MIPI CSI CLK negative input for channel B | AVDD18_MIPICSI | NC |
| CSI_CLKB_P | AI | - | MIPI CSI CLK positive input for channel B | AVDD18_MIPICSI | NC |
| AVDD18_MIPICSI | AP | - | MIPI-CSI power supply | - | To 1.8V |
| Audio DAC | | | | | |
| LOLN | AO | - | Audio DAC line-out left channel negative signal | AVDD18_Audio | NC |
| LOLP | AO | - | Audio DAC line-out left channel positive signal | AVDD18_Audio | NC |
| LORN | AO | - | Audio DAC line-out right channel negative signal | AVDD18_Audio | NC |
| LORP | AO | - | Audio DAC line-out right channel positive signal | AVDD18_Audio | NC |
| REFP | A | - | Audio DAC positive reference voltage | AVDD18_Audio | NC |
| VMID | A | - | Audio DAC external filter cap connection | AVDD18_Audio | NC |
| AVDD18_AUDIO | AP | - | Analog 1.8V for Audio DAC | - | To 1.8V |
| AVSS_Audio | AP | - | Analog power ground for Audio DAC | - | To VSS |
| PCIE | | | | | |
| PCIE_CLK_n | AO | - | PCIE reference clock negative signal | AVDD18_PCIE | NC |
| PCIE_CLK_p | AO | - | PCIE reference clock positive signal | AVDD18_PCIE | NC |

| Net Name | Type | Default Pull UP/DN | Description | Power Domain | If Unused |
|-------------------------------|------|--------------------|---|---------------|-------------|
| PCIE_REXT | AIO | - | PCIE output strength setting resistor | AVDD18_PCIE | NC |
| PCIE_RXN | AI | - | PCIE or USB3.0input negative signal | AVDD18_PCIE | NC |
| PCIE_RXP | AI | - | PCIE or USB3.0input positive signal | AVDD18_PCIE | NC |
| PCIE_TXN | AO | - | PCIE or USB3.0 output negative signal | AVDD18_PCIE | NC |
| PCIE_TXP | AO | - | PCIE or USB3.0output positive signal | AVDD18_PCIE | NC |
| AVDD0V8_USB_PCIE | AP | - | Analog 0.8V power supply for USB and PCIE | - | To VDD_EE |
| AVDD18_PCIE | AP | - | Analog 1.8V power supply for PCIE | - | To 1.8V |
| HCSL_REXT | AIO | - | PCIE reference clk output strength setting resistor | AVDD18_PCIE | NC |
| AVSS_HCSL | AP | - | Analog ground for PCIE reference module clock | - | To VSS |
| System Clock & PLL | | | | | |
| SYS_OSCIN | AI | - | 24MHz crystal oscillator input | VDD18_AO_XTAL | To XTAL |
| SYS_OSCOUT | AO | - | 24MHz crystal oscillator output | VDD18_AO_XTAL | To XTAL |
| Analog Power | | | | | |
| AVDD18_DPLL | AP | - | Analog power of System PLL | - | To 1.8V |
| AVSS_ENETPLL | AP | - | Ground of Ethernet PLL | - | To GND |
| AVSS_AMPLL | AP | - | Ground of DDR AM_ PLL | - | To GND |
| AVSS_HPLL | AP | - | Ground of HDMI PLL | - | To GND |
| AVSS_PLL | AP | - | Ground of System PLL | - | To GND |
| AVSS_CVBS | AP | - | Ground of CVBS digital-analog converter | - | To GND |
| Digital Power | | | | | |
| VDDCPU_A | P | - | Power supply for CPU (Cortex A73) | - | To VDDCPU_A |
| VDDCPU_B | P | - | Power supply for CPU (Cortex A53) | - | To VDDCPU_B |

| Net Name | Type | Default Pull UP/DN | Description | Power Domain | If Unused |
|-----------------------|------|--------------------|--|--------------|------------------|
| VDDQ | P | - | DDR IO Power supply for DDR PHY | - | To VDDQ |
| VDD_DDR | P | - | Core Power supply for DDR PHY | - | To VDD_EE |
| VDD_EE | P | - | Power supply for GPU and core logic | - | To VDD_EE |
| VDD18_AO_XTAL | P | - | 1.8V Power supply for Always On Domain | - | To VDD18_AO_XTAL |
| VDDAO_0V8 | P | - | 0.8V power supply for AO, XTAL and M3/M4 CPU | - | To VDDAO_0V8 |
| VDDIO_A | P | - | Power supply for GPIO bank A | - | NC |
| VDDIO_BOOT | P | - | Power supply for GPIO bank BOOT | - | NC |
| VDDIO_C | P | - | Power supply for GPIO bank C | - | NC |
| VDDIO_H | P | - | Power supply for GPIO bank H | - | NC |
| VDDIO_X | P | - | Power supply for GPIO bank X | - | NC |
| VDDIO_Z | P | - | Power supply for GPIO bank Z | - | NC |
| Digital Ground | | | | | |
| DVSS | P | - | Digital power ground | - | To GND |

Abbreviations:

- DI = Digital input pin
- DO = Digital output pin
- DIO = Digital input/output pin
- OD3.3V = 3.3V input tolerant open drain (OD) output pin, need external pull up
- OD5V = 5V input tolerant open drain (OD) output pin, need external pull up
- A = Analog setting or filtering pin
- AI = Analog input pin
- AO = Analog output pin
- AIO = Analog input/output pin
- P = Power pin
- AP = Analog power pin
- NC = No connection
- UP = Pull-Up

- DOWN = Pull-down
- Z = High-Z

3.4 Pin Multiplexing Tables

Multiple usage pins are used to conserve pin consumption for different features. The A311D devices can be used in many different applications but each application will not utilize all the on chip features. As a result, some of the features share the same pin. Most of the multiple usage pins can be used as a GPIO pin as well.

Table 3-3. GPIOZ_x Multi-Function Pin

| Pin Name | Fun1 | Func2 | Func3 | Func4 | Func5 | Func6 | Func7 |
|----------|------------------|--------------|---------------|---------------|---------------|---------------|---------------|
| GPIOZ_0 | ETH_MDIO | BT656_A_VS | ISO7816_C_LK | I2C_EE_M0_SDA | PWM_B | - | - |
| GPIOZ_1 | ETH_MDC | BT656_A_HS | ISO7816_D_ATA | I2C_EE_M0_SCL | PWM_C | - | - |

| GPIOZ_13 | ETH_TXD3_RGMII | CLK12_24 | TSIN_B_DIN7 | - | PWM_B | - | GEN_CLK_EE |
| GPIOZ_14 | ETH_LINK_LED | - | I2C_EE_M2_SDA | - | - | - | - |
| GPIOZ_15 | ETH_ACT_LED | - | I2C_EE_M2_SCL | - | - | - | - |

Table 3-4. GPIOA_x Multi-Function Pin

| Pin Name | Func1 | Func2 | Func3 |
|----------|--------------|---------------|---------------|
| GPIOA_0 | MCLK_0 | - | - |
| GPIOA_1 | TDMB_SCLK | TDMB_SLV_SCLK | - |
| GPIOA_2 | TDMB_FS | TDMB_SLV_FS | - |
| GPIOA_3 | TDMB_D0 | TDMB_DIN0 | - |
| GPIOA_4 | TDMB_D1 | TDMB_DIN1 | PWM_D |
| GPIOA_5 | PDM_DIN3 | TDMB_DIN2 | TDMB_D2 |
| GPIOA_6 | PDM_DIN2 | TDMB_DIN3 | TDMB_D3 |
| GPIOA_7 | PDM_DCLK | TDMC_D3 | TDMC_DIN3 |
| GPIOA_8 | PDM_DIN0 | TDMC_D2 | TDMC_DIN2 |
| GPIOA_9 | PDM_DIN1 | TDMC_D1 | TDMC_DIN1 |
| GPIOA_10 | SPDIF_IN | TDMC_D0 | TDMC_DIN0 |
| GPIOA_11 | SPDIF_OUT | MCLK_1 | PWM_F |
| GPIOA_12 | SPDIF_IN | TDMC_SCLK | TDMC_SLV_SCLK |
| GPIOA_13 | SPDIF_OUT | TDMC_FS | TDMC_SLV_FS |
| GPIOA_14 | WORLD_SYNC | I2C_EE_M3_SDA | - |
| GPIOA_15 | IR_REMOTE_IN | I2C_EE_M3_SCL | - |

Table 3-5. BOOT_x Multi-Function Pin

| Pin Name | Func1 | Func2 | Func3 |
|----------|---------------|--------------|----------|
| BOOT_0 | EMMC_D0 | - | - |
| BOOT_1 | EMMC_D1 | - | - |
| BOOT_2 | EMMC_D2 | - | - |
| BOOT_3 | EMMC_D3 | - | NOR_HOLD |
| BOOT_4 | EMMC_D4 | - | NOR_D |
| BOOT_5 | EMMC_D5 | - | NOR_Q |
| BOOT_6 | EMMC_D6 | - | NOR_C |
| BOOT_7 | EMMC_D7 | - | NOR_WP |
| BOOT_8 | EMMC_CLK | NAND_WEN_CLK | - |
| BOOT_9 | - | NAND_ALE | - |
| BOOT_10 | EMMC_CMD | NAND_CLE | - |
| BOOT_11 | - | NAND_CE0 | - |
| BOOT_12 | - | NAND_REN_WR | - |
| BOOT_13 | EMMC_NAND_DQS | - | - |
| BOOT_14 | - | NAND_RB0 | NOR_CS |
| BOOT_15 | - | NAND_CE1 | - |

Table 3-6. GPIOC_x Multi-Function Pin

| Pin Name | Func1 | Func2 | Func3 | Func4 | Func5 |
|----------|-------------|--------------|---------------|----------|--------------|
| GPIOC_0 | SDCARD_D0 | JTAG_B_TDO | - | PDM_DIN0 | SPI_A_MOSI |
| GPIOC_1 | SDCARD_D1 | JTAG_B_TDI | - | PDM_DIN1 | SPI_A_MISO |
| GPIOC_2 | SDCARD_D2 | UART_AO_A_RX | - | PDM_DIN2 | SPI_A_SS0 |
| GPIOC_3 | SDCARD_D3 | UART_AO_A_TX | - | PDM_DIN3 | SPI_A_SCLK |
| GPIOC_4 | SDCARD_CLK | JTAG_B_CLK | - | PDM_DCLK | PWM_C |
| GPIOC_5 | SDCARD_CMD | JTAG_B_TMS | I2C_EE_M0_SDA | - | ISO7816_CLK |
| GPIOC_6 | - | - | I2C_EE_M0_SCL | - | ISO7816_DATA |
| GPIOC_7 | PCIECK_REQN | WORLD_SYNC | - | - | - |

Table 3-7. GPIOX_x Multi-Function Pin

| Pin Name | Func1 | Func2 | Func3 | Func4 | Func5 | Func6 | Func7 |
|----------|---------------|---------------|--------------|------------|---------------|--------------|-------|
| GPIOX_0 | SDIO_D0 | PDM_DIN0 | TSIN_A_DIN0 | - | - | - | - |
| GPIOX_1 | SDIO_D1 | PDM_DIN1 | TSIN_A_SOP | - | - | - | - |
| GPIOX_2 | SDIO_D2 | PDM_DIN2 | TSIN_A_VALID | - | - | - | - |
| GPIOX_3 | SDIO_D3 | PDM_DIN3 | TSIN_A_CLOCK | PWM_D | - | - | - |
| GPIOX_4 | SDIO_CLK | PDM_DCLK | - | - | - | - | - |
| GPIOX_5 | SDIO_CMD | MCLK_1 | - | PWM_C | - | - | - |
| GPIOX_6 | PWM_A | UART_EE_B_TX | - | PWM_D | - | - | - |
| GPIOX_7 | PWM_F | UART_EE_B_RX | - | PWM_B | - | - | - |
| GPIOX_8 | TDMA_D1 | TDMA_DIN1 | TSIN_B_SOP | SPI_A_MOSI | PWM_C | ISO7816_CLK | - |
| GPIOX_9 | TDMA_D0 | TDMA_DIN0 | TSIN_B_VALID | SPI_A_MISO | - | ISO7816_DATA | - |
| GPIOX_10 | TDMA_FS | TDMA_SLV_FS | TSIN_B_DIN0 | SPI_A_SS0 | I2C_EE_M1_SDA | - | - |
| GPIOX_11 | TDMA_SCLK | TDMA_SLV_SCLK | TSIN_B_CLOCK | SPI_A_SCLK | I2C_EE_M1_SCL | - | - |
| GPIOX_12 | UART_EE_A_TX | - | - | - | - | - | - |
| GPIOX_13 | UART_EE_A_RX | - | - | - | - | - | - |
| GPIOX_14 | UART_EE_A_CTS | - | - | - | - | - | - |
| GPIOX_15 | UART_EE_A_RTS | - | - | - | - | - | - |
| GPIOX_16 | PWM_E | - | - | - | - | - | - |
| GPIOX_17 | I2C_EE_M2_SDA | - | - | - | - | - | - |
| GPIOX_18 | I2C_EE_M2_SCL | - | - | - | - | - | - |

| Pin Name | Func1 | Func2 | Func3 | Func4 | Func5 | Func6 | Func7 |
|----------|-------|----------------|-------|-------|-------|-------|----------------|
| GPIOX_19 | PWM_B | WORLD_SYN C | - | - | - | - | GEN_CLK _EE |

Table 3-8. GPIOH_x Multi-Function Pin

| Pin Name | Func1 | Func2 | Func3 | Func4 | Func5 | Func6 |
|----------|------------------|-------------------|------------|---------------|---------------|---------------|
| GPIOH_0 | HDMITX_SDA | I2C_EE_M3_SDA | - | - | - | - |
| GPIOH_1 | HDMITX_SCL | I2C_EE_M3_SCL | - | - | - | - |
| GPIOH_2 | HDMITX_HPDI N | I2C_EE_M1_SDA | - | - | - | - |
| GPIOH_3 | - | I2C_EE_M1_SCL | - | AO_CEC_A | AO_CEC_B | - |
| GPIOH_4 | SPDIF_OUT | UART_EE_C_RT S | SPI_B_MOSI | - | - | - |
| GPIOH_5 | SPDIF_IN | UART_EE_C_CTS | SPI_B_MISO | PWM_F | TDMB_D3 | TDMB_DIN 3 |
| GPIOH_6 | ISO7816_CLK | UART_EE_C_RX | SPI_B_SS0 | I2C_EE_M1_SDA | IR_REMOTE_OUT | - |
| GPIOH_7 | ISO7816_DATA | UART_EE_C_TX | SPI_B_SCLK | I2C_EE_M1_SCL | PWM_B | - |
| GPIOH_8 | - | - | - | - | - | - |

Table 3-9. GPIOAO_x Multi-Function Pin

| Pin Name | Func1 | Func2 | Func3 | Func4 | Func5 | Func6 | Func7 |
|----------|---------------|--------------|---------------|-------------|---------|-----------|-------|
| GPIOAO_0 | UART_AO_A_TX | - | - | - | - | - | - |
| GPIOAO_1 | UART_AO_A_RX | - | - | - | - | - | - |
| GPIOAO_2 | I2C_AO_M0_SCL | UART_AO_B_TX | I2C_AO_S0_SCL | - | - | - | - |
| GPIOAO_3 | I2C_AO_M0_SDA | UART_AO_B_RX | I2C_AO_S0_SDA | - | - | - | - |
| GPIOAO_4 | IR_REMOTE_OUT | CLK_32K_IN | PWMAO_C | PWMAO_C_HIZ | TDMB_D0 | TDMB_DIN0 | - |

| Pin Name | Func1 | Func2 | Func3 | Func4 | Func5 | Func6 | Func7 |
|-----------|--------------|---------------|--------------|--------------|------------|---------------|----------|
| GPIOAO_5 | IR_REMOTE_IN | - | PWMAO_D | - | - | - | - |
| GPIOAO_6 | JTAG_A_CLK | - | PWMAO_C | TSIN_A_SOP | TDMB_D2 | TDMB_DIN2 | - |
| GPIOAO_7 | JTAG_A_TMS | - | - | TSIN_A_DIN0 | TDMB_FS | TDMB_SLV_FS | - |
| GPIOAO_8 | JTAG_A_TDI | - | UART_AO_B_TX | TSIN_A_CLK | TDMB_SCLK | TDMB_SLV_SCLK | - |
| GPIOAO_9 | JTAG_A_TDO | IR_REMOTE_OUT | UART_AO_B_RX | TSIN_A_VALID | MCLK_0 | - | - |
| GPIOAO_10 | AO_CEC_A | AO_CEC_B | PWMAO_D | SPDIF_OUT | TDMB_D1 | TDMB_DIN1 | CLK12_24 |
| GPIOAO_11 | - | PWMAO_A_HIZ | PWMAO_A | GEN_CLK_EE | GEN_CLK_AO | - | - |

Table 3-10. GPIOE_x Multi-Function Pin

| Pin Name | Func1 | Func2 | Func3 | Func4 |
|----------|---------------|---------------|---------|---------------|
| GPIOE_0 | UART_AO_A_CTS | UART_AO_B_CTS | PWMAO_B | I2C_AO_M0_SCL |
| GPIOE_1 | UART_AO_A_RTS | UART_AO_B_RTS | PWMAO_D | I2C_AO_M0_SDA |
| GPIOE_2 | CLK12_24 | CLK25_EE | - | - |

Table 3-11 DDR AC Multi-Function Pin

| Pin Name | LPDDR3 | LPDDR4 | DDR3 | DDR4 |
|----------|--------|--------|-------|-------|
| AC_0 | CKEA0 | CKEA0 | CKE0 | CKE0 |
| AC_1 | CKEA1 | CKEA1 | CKE1 | CKE1 |

3.5 Signal Descriptions

Table 3-13. SD Card Interface Signal Description

| Signal Name | Type | Description |
|-------------|------|-------------------------------|
| SDCARD_D0 | DIO | SD Card data bus bit 0 signal |
| SDCARD_D1 | DIO | SD Card data bus bit 1 signal |
| SDCARD_D2 | DIO | SD Card data bus bit 2 signal |
| SDCARD_D3 | DIO | SD Card data bus bit 3 signal |
| SDCARD_CLK | DO | SD Card clock signal |
| SDCARD_CMD | DIO | SD Card command signal |

Table 3-14. SDIO Interface Signal Description

| Signal Name | Type | Description |
|-------------|------|----------------------------|
| SDIO_D0 | DIO | SDIO data bus bit 0 signal |
| SDIO_D1 | DIO | SDIO data bus bit 1 signal |
| SDIO_D2 | DIO | SDIO data bus bit 2 signal |
| SDIO_D3 | DIO | SDIO data bus bit 3 signal |
| SDIO_CLK | DO | SDIO clock signal |
| SDIO_CMD | DIO | SDIO command signal |

Table 3-15. Clock Interface Signal Description

| Signal Name | Type | Description |
|-------------|------|--------------------------|
| CLK_32K_IN | DI | 32KHz clock input |
| CLK12_24 | DO | 12MHz/24MHZ clock output |
| CLK25_EE | DO | 25MHz clock output |

Table 3-16. UART Interface Signal Description

| Signal Name | Type | Description |
|---------------|------|---|
| UART_AO_A_TX | DO | UART Port A data output in AO domain |
| UART_AO_A_RX | DI | UART Port A data input in AO domain |
| UART_AO_A_CTS | DI | UART Port A Clear To Send Signal in AO domain |
| UART_AO_A_RTS | DO | UART Port A Ready To Send Signal in AO domain |
| UART_AO_B_TX | DO | UART Port B data output in AO domain |
| UART_AO_B_RX | DI | UART Port B data input in AO domain |
| UART_AO_B_CTS | DI | UART Port B Clear To Send Signal in AO domain |
| UART_AO_B_RTS | DO | UART Port B Ready To Send Signal in AO domain |
| UART_EE_A_TX | DO | UART Port A data output in EE domain |
| UART_EE_A_RX | DI | UART Port A data input in EE domain |
| UART_EE_A_CTS | DI | UART Port A Clear To Send Signal in EE domain |
| UART_EE_A_RTS | DO | UART Port A Ready To Send Signal in EE domain |
| UART_EE_B_TX | DO | UART Port B data output in EE domain |
| UART_EE_B_RX | DI | UART Port B data input in EE domain |
| UART_EE_B_CTS | DI | UART Port B Clear To Send Signal in EE domain |
| UART_EE_B_RTS | DO | UART Port B Ready To Send Signal in EE domain |
| UART_EE_C_TX | DO | UART Port C data output in EE domain |
| UART_EE_C_RX | DI | UART Port C data input in EE domain |
| UART_EE_C_CTS | DI | UART Port C Clear To Send Signal in EE domain |
| UART_EE_C_RTS | DO | UART Port C Ready To Send Signal in EE domain |

Table 3-17. ISO7816 Interface Signal Description

| Signal Name | Type | Description |
|--------------|------|----------------------|
| ISO7816_DATA | DIO | ISO7816 data signal |
| ISO7816_CLK | DO | ISO7816 clock signal |

Table 3-18. TS In Interface Signal Description

| Signal Name | Type | Description |
|-------------|------|-------------|
|-------------|------|-------------|

| | | |
|--------------|----|--|
| TSIN_A_DIN0 | DI | Serial TS input port A data |
| TSIN_A_CLK | DI | TS input port A clock |
| TSIN_A_SOP | DI | TS input port A start of stream signal |
| TSIN_A_VALID | DI | TS input port A data valid signal |
| TSIN_B_DIN0 | DI | Serial/Parallel TS input port B data 0 |
| TSIN_B_DIN1 | DI | Parallel TS input port B data 1 |
| TSIN_B_DIN2 | DI | Parallel TS input port B data 2 |
| TSIN_B_DIN3 | DI | Parallel TS input port B data 3 |
| TSIN_B_DIN4 | DI | Parallel TS input port B data 4 |
| TSIN_B_DIN5 | DI | Parallel TS input port B data 5 |
| TSIN_B_DIN6 | DI | Parallel TS input port B data 6 |
| TSIN_B_DIN7 | DI | Parallel TS input port B data 7 |
| TSIN_B_FAIL | DI | TS input port B fail signal |
| TSIN_B_CLK | DI | TS input port B clock |
| TSIN_B_SOP | DI | TS input port B start of stream signal |
| TSIN_B_VALID | DI | TS input port B data valid signal |

Table 3-19. PWM Interface Signal Description

| Signal Name | Type | Description |
|-----------------------|------|--|
| PWM_A | DO | PWM channel A output signal |
| PWM_B | DO | PWM channel B output signal |
| PWM_C | DO | PWM channel C output signal |
| PWM_D | DO | PWM channel D output signal |
| PWM_E | DO | PWM channel E output signal |
| PWM_F | DO | PWM channel F output signal |
| PWMAO_A / PWMAO_A_HIZ | DO | PWM A output signal in Always On domain, or extended HiZ function of PWMAO_A |
| PWMAO_B | DO | PWM B output signal in Always On domain |
| PWMAO_C / PWMAO_C_HIZ | DO | PWM C output signal in Always On domain, or extended HiZ function of PWMAO_C |
| PWMAO_D | DO | PWM D output signal in Always On domain |

Table 3-20. I2C Interface Signal Description

| Signal Name | Type | Description |
|---------------|------|---|
| I2C_AO_M0_SCL | DO | I2C bus port 0 clock output, Master mode, in AO domain |
| I2C_AO_M0_SDA | DIO | I2C bus port 0 data input/output, Master mode, in AO domain |
| I2C_AO_S0_SCL | DI | I2C bus port 0 clock input, Slave mode, in AO domain |
| I2C_AO_S0_SDA | DIO | I2C bus port 0 data input/output, Slave mode, in AO domain |
| I2C_EE_M0_SCL | DO | I2C bus port 0 clock output, Master mode, in EE domain |
| I2C_EE_M0_SDA | DIO | I2C bus port 0 data input/output, Master mode, in EE domain |
| I2C_EE_M1_SCL | DO | I2C bus port 1 clock output, Master mode, in EE domain |
| I2C_EE_M1_SDA | DIO | I2C bus port 1 data input/output, Master mode, in EE domain |
| I2C_EE_M2_SCL | DO | I2C bus port 2 clock output, Master mode, in EE domain |
| I2C_EE_M2_SDA | DIO | I2C bus port 2 data input/output, Master mode, in EE domain |
| I2C_EE_M3_SCL | DO | I2C bus port 3 clock output, Master mode, in EE domain |
| I2C_EE_M3_SDA | DIO | I2C bus port 3 data input/output, Master mode, in EE domain |

Table 3-21. eMMC Interface Signal Description

| Signal Name | Type | Description |
|-------------|------|---------------------------------|
| EMMC_D0 | DIO | eMMC/NAND data bus bit 0 signal |
| EMMC_D1 | DIO | eMMC/NAND data bus bit 1 signal |
| EMMC_D2 | DIO | eMMC/NAND data bus bit 2 signal |
| EMMC_D3 | DIO | eMMC/NAND data bus bit 3 signal |
| EMMC_D4 | DIO | eMMC/NAND data bus bit 4 signal |
| EMMC_D5 | DIO | eMMC/NAND data bus bit 5 signal |
| EMMC_D6 | DIO | eMMC/NAND data bus bit 6 signal |
| EMMC_D7 | DIO | eMMC/NAND data bus bit 7 signal |
| EMMC_CLK | DO | eMMC clock signal |
| EMMC_CMD | DIO | eMMC command signal |

| Signal Name | Type | Description |
|---------------|------|-----------------------|
| EMMC_NAND_DQS | DIO | eMMC/NAND data strobe |

Table 3-22. NAND Signal Description

| Signal Name | Type | Description |
|--------------|------|--------------------------------|
| NAND_RB0 | DI | NAND ready/busy |
| NAND_ALE | DO | NAND address latch enable |
| NAND_CE0 | DO | NAND chip enable 0 |
| NAND_CE1 | DO | NAND chip enable 1 |
| NAND_CLE | DO | NAND command latch enable |
| NAND_REN_WR | DO | NAND read enable or write/read |
| NAND_WEN_CLK | DO | NAND write enable or clock |

Table 3-23. NOR Interface Signal Description

| Signal Name | Type | Description |
|-------------|------|--|
| NOR_CS | DO | SPI NOR chip select |
| NOR_C | DO | SPI NOR Serial Clock |
| NOR_D | DIO | SPI NOR 1bit mode Output, 2/4 bit mode data I/O 0 |
| NOR_Q | DIO | SPI NOR 1bit mode Input, 2/4 bit mode data I/O 1 |
| NOR_WP | DIO | SPI NOR Write protection output, 4 bit mode data I/O 2 |
| NOR_HOLD | DIO | SPI bus hold output, 4 bit mode data I/O 3 |

Table 3-24. HDMI Interface Signal Description

| Signal Name | Type | Description |
|---------------|------|---|
| HDMITX_SDA | DIO | HDMI TX DDC_I2C interface data signal |
| HDMITX_SCL | DO | HDMI TX DDC_I2C interface clock signal |
| HDMITX_HPD_IN | DI | HDMI TX hot-plug in signal input |
| AO_CEC_A | DIO | Customer Electronics Control signal in AO domain |
| AO_CEC_B | DIO | 2nd pin of Customer Electronics Control signal in AO domain |

Table 3-25. SPDIF Interface Signal Description

| Signal Name | Type | Description |
|-------------|------|---------------------|
| SPDIF_IN | DI | SPDIF input signal |
| SPDIF_OUT | DO | SPDIF output signal |

Table 3-26. PCIE Interface Signal Description

| Signal Name | Type | Description |
|-------------|------|--------------------------|
| PCIECK_REQN | DI | PCIE clock request input |

Table 3-27. SPI Interface Signal Description

| Signal Name | Type | Description |
|-------------|------|----------------------------------|
| SPI_A_MOSI | DIO | SPI master output, slave input A |
| SPI_A_MISO | DIO | SPI master input, slave output A |
| SPI_A_SCLK | DIO | SPI clock A |
| SPI_A_SS0 | DIO | SPI slave select 0 A |
| SPI_B_MOSI | DIO | SPI master output, slave input B |
| SPI_B_MISO | DIO | SPI master input, slave output B |
| SPI_B_SCLK | DIO | SPI clock B |
| SPI_B_SS0 | DIO | SPI slave select 0 B |

Table 3-28. Remote Interface Signal Description

| Signal Name | Type | Description |
|---------------|------|--------------------------|
| IR_REMOTE_IN | DI | IR remote control input |
| IR_REMOTE_OUT | DO | IR remote control output |

Table 3-29. Time Division Multiplexing Signal Description

| Signal Name | Type | Description |
|-------------|------|--|
| MCLK_0 | DO | Master clock output 0, for I2S master mode |
| MCLK_1 | DO | Master clock output 1, for I2S master mode |
| TDMA_DIN0 | DI | Data input 0 of TDM port A |

| Signal Name | Type | Description |
|---------------|------|---|
| TDMA_DIN1 | DI | Data input 1 of TDM port A |
| TDMA_D0 | DIO | Data input/output 0 of TDM port A |
| TDMA_D1 | DIO | Data input/output 1 of TDM port A |
| TDMA_SCLK | DO | Bit clock output of TDM port A |
| TDMA_FS | DO | Frame sync output of TDM port A (Word clock of I2S) |
| TDMA_SLV_SCLK | DI | Bit clock input of TDM port A |
| TDMA_SLV_FS | DI | Frame sync input of TDM port A (Word clock of I2S) |
| TDMB_DIN0 | DI | Data input 0 of TDM port B |
| TDMB_DIN1 | DI | Data input 1 of TDM port B |
| TDMB_DIN2 | DI | Data input 2 of TDM port B |
| TDMB_DIN3 | DI | Data input 3 of TDM port B |
| TDMB_D0 | DIO | Data input/output 0 of TDM port B |
| TDMB_D1 | DIO | Data input/output 1 of TDM port B |
| TDMB_D2 | DIO | Data input/output 2 of TDM port B |
| TDMB_D3 | DIO | Data input/output 3 of TDM port B |
| TDMB_SCLK | DO | Bit clock output of TDM port B |
| TDMB_FS | DO | Frame sync output of TDM port B (Word clock of I2S) |
| TDMB_SLV_SCLK | DI | Bit clock input of TDM port B |
| TDMB_SLV_FS | DI | Frame sync input of TDM port B (Word clock of I2S) |
| TDMC_DIN0 | DI | Data input 0 of TDM port C |
| TDMC_DIN1 | DI | Data input 1 of TDM port C |
| TDMC_DIN2 | DI | Data input 2 of TDM port C |
| TDMC_DIN3 | DI | Data input 3 of TDM port C |
| TDMC_D0 | DIO | Data input/output 0 of TDM port C |
| TDMC_D1 | DIO | Data input/output 1 of TDM port C |
| TDMC_D2 | DIO | Data input/output 2 of TDM port C |
| TDMC_D3 | DIO | Data input/output 3 of TDM port C |
| TDMC_SCLK | DO | Bit clock output of TDM port C |
| TDMC_FS | DO | Frame sync output of TDM port C (Word clock of I2S) |

| Signal Name | Type | Description |
|---------------|------|--|
| TDMC_SLV_SCLK | DI | Bit clock input of TDM port C |
| TDMC_SLV_FS | DI | Frame sync input of TDM port C (Word clock of I2S) |

4. Electrical Characteristics

4.1 Absolute Maximum Ratings

The table below gives the absolute maximum ratings. Exposure to stresses beyond those listed in this table may result in permanent device damage, unreliability or both.

| Characteristic | Value | Unit |
|---------------------------|------------------|------|
| VDDCPU_A/B Supply Voltage | 1.1 | V |
| VDD_EE Supply Voltage | 1.0 | V |
| VDDQ Supply Voltage | 1.7 | V |
| AVDD_DDRPLL | 1.98 | V |
| 1.8V Supply Voltage | 1.98 | V |
| 3.3V Supply Voltage | 3.63 | V |
| Input voltage, V_i | -0.3 ~ VDDIO+0.3 | V |
| Junction Temperature | 125 | °C |

4.2 Recommended Operating Conditions

Note:

All voltage specs listed in this part are applicable at the pins of the chip, not the output of the DC-DC.

| Symbol | Parameter | Min. | Typ. | Max. | Unit |
|------------------------------|--|-------------------|------------------|-------------------|------|
| VDDCPU_A/B | Voltage for Cortex A73/A53 CPU | 0.68 ¹ | - | 1.03 ² | V |
| VDD_EE and other 0.8V domain | Voltage for GPU & core logic | 0.78 | 0.8 ⁵ | 0.9 ² | V |
| VDDQ | DDR3/DDR3L/DDR4/LPDDR/LPDDR3/LPDDR4 IO Supply Voltage | 1.05 | - | 1.6 | V |
| AVDD18 | 1.8V AVDD for HDMI, USB, SARADC, PCIE, CVBS, AUDIO, MIPI_DSI, MIPI_CSI and ETHERNET phy. | 1.71 | 1.80 | 1.89 | V |
| VDD18_AO_XTAL | 1.8V VDD for XTAL, and IOVREF | 1.71 | 1.80 | 1.89 | V |
| AVDD_DDRPLL | Analog power supply for DDRPLL module | 1.05 | - | 1.89 | V |
| AVDD33 | 3.3V AVDD for USB | 3.15 | 3.3 | 3.45 | V |
| VDDIO | LV mode | 1.71 | 1.80 | 1.89 | V |
| | HV mode | 3.0 ³ | 3.3 | 3.45 | V |
| T _J | Operating Junction Temperature | 0 | - | 105 ⁴ | °C |
| T _A | Operating Ambient Temperature | 0 | - | 70 | °C |

Note:

- 1) Minimal VDDCPU_A/B voltage is for sleep mode while system runs at very low speed. Higher clock will need higher voltage. Considering the power supply may have 3% deviation, the minimal voltage in actual application should not be set to lower than min spec plus 0.02V.
- 2) Likewise, maximum VDDCPU_A/B voltage in actual application should not be higher than max spec minus 0.03V. Voltage of VDDCPU_A/B will affect CPU speed. Use lower voltage when CPU runs on lower speed to save power. Recommend to use +/-1.5% or higher precision DCDC.
- 3) GPIO cannot work if VDDIO voltage is out of the spec of LV / HV mode. GPIO output at HV mode will be weaker & max operating speed will be lower if VDDIO are design to 3.0V. Do not design VDDIO to lower than 3.0V in HV mode, recommend to use +/-1.5% or higher precision DCDC to supply power for VDDIO, actual voltage supplies to VDDIO (HV mode) should not be lower than 2.9V.
- 4) For operating temperature, good heat sink may be needed to guarantee $T_j < \text{max spec}$.
- 5) For DDR4/LPDDR4, when the rate reaches 3200 Mbit/s, the voltage of VDD_DDR should not be set lower than 0.84V.

4.3 Ripple Voltage Specification

| Power | Max Ripple | Unit | Test state |
|------------------------------|------------|-------|-------------------------------|
| VDDCPU_A | 40 | +/-mV | Run APK StabilityTest |
| VDDCPU_B | 40 | +/-mV | Run APK StabilityTest |
| VDD_EE and other 0.8V domain | 40 | +/-mV | Run APK Basemark ES 2.0 Taiji |
| DDR3 VDDQ and AVDD_DDRPLL | 60 | +/-mV | Kernel boot |
| DDR3L VDDQ and AVDD_DDRPLL | 60 | +/-mV | Kernel boot |
| LPDDR3 VDDQ and AVDD_DDRPLL | 40 | +/-mV | Kernel boot |
| DDR4 VDDQ and AVDD_DDRPLL | 40 | +/-mV | Kernel boot |
| LPDDR4 VDDQ and AVDD_DDRPLL | 40 | +/-mV | Kernel boot |
| AVDD18 | 30 | +/-mV | Kernel boot |
| VDD18_AO_XTAL | 30 | +/-mV | Kernel boot |
| AVDD33 | 50 | +/-mV | WIFI SCAN |
| VDDIO LV | 60 | +/-mV | Kernel boot |
| VDDIO HV | 60 | +/-mV | WIFI SCAN |

Note:

Ripple specification is only a reference spec, customer should run stress/performance/reliability test (high/low temperature test , damp and hot test , function test , etc...) on their product to confirm the system stability

4.4 Thermal Resistance

Jedec 2P2S board 101.5mm*114.5mm, natural convection, ambient temperature 25°C.

| Symbol | Parameter | Value (°C/Watt) | Air Flow (m/s) |
|---------------|--|--------------------|-------------------|
| Θ_{ja} | Package junction-to-ambiance thermal resistance in nature convection | 15.0521 | 0 |
| Θ_{jb} | Package junction-to-pcb thermal resistance in nature convection | 6.26571 | 0 |
| Θ_{jc} | Package junction-to-case thermal resistance in nature convection | 5.57433 | 0 |

Note:

- Due to the thinness of the SOC, DRAM or capacitors placed close to SOC may prevent heatsink touching SOC top side. A special convex shape heatsink is recommended.
- These measurement were conducted on a JEDEC defined 2S2P system. For more information, check below JEDEC standards:
 - JESD51-2A: Integrated Circuits Thermal Test Method Environmental Conditions - Natural Convection (Still Air)
 - JESD51-8: Integrated Circuit Thermal Test Method Environmental Conditions — Junction-to-Board
 - JESD51-12: Guidelines for Reporting and Using Electronic Package Thermal Information
- m/s = meters per second

4.5 DC Electrical Characteristics

4.5.1 Normal GPIO Specifications (For DIO)

| Symbol | Parameter | Min. | Typ. | Max. | Unit |
|-----------------------------|--|------------------|------|-------------------|------|
| $V_{IH}(VDDIO=3.3V)^3$ | High-level input voltage | IOVREF+0.37 | - | VDDIO+0.3 | V |
| $V_{IL}(VDDIO=3.3V)^3$ | Low-level input voltage | -0.3 | - | IOVREF-0.23 | V |
| $V_{IH}(VDDIO=1.8V)^3$ | High-level input voltage | IOVREF/2+0.3 | - | VDDIO+0.3 | V |
| $V_{IL}(VDDIO=1.8V)^3$ | Low-level input voltage | -0.3 | - | IOVREF/2-0.3 | V |
| R_{PU} | Built-in pull up resistor | 50K | 60K | 70K | ohm |
| R_{PD} | Built-in pull down resistor | 50K ⁵ | 60K | 130K ⁶ | ohm |
| $I_{oL}/I_{oH}(DS=0)^{1,4}$ | GPIO driving capability | 0.5 | - | - | mA |
| $I_{oL}/I_{oH}(DS=1)^1$ | GPIO driving capability | 2.5 | - | - | mA |
| $I_{oL}/I_{oH}(DS=2)^1$ | GPIO driving capability | 3 | - | - | mA |
| $I_{oL}/I_{oH}(DS=3)^1$ | GPIO driving capability | 4 ² | - | - | mA |
| VOH | Output high level with I_{oL}/I_{oH} loading | VDDIO-0.5 | - | - | V |
| VOL | Output low level with I_{oL}/I_{oH} loading | - | - | 0.4 | V |

Note:

- With Minimal I_{oL}/I_{oH} driving capability loading, IO is guaranteed to meet $V_{ol} < 0.4V$ or $V_{OH} > (VDDIO-0.5V)$ spec.
- Maximal GPIO loading is 6mA for application such as driving LED, which does not care about V_{ol}/V_{oh} spec. Please set DS=3 for such application.

3. VDD18_AO supplies power to IOVREF.
4. Do not use this setting, it's too weak for most applications.
5. Test condition, GPIO pin voltage close to 0 V.
6. Test condition, GPIO pin voltage close to VDDIO(3.3 V).

4.5.2 Open Drain GPIO Specifications (For DIO_OD)

| Symbol | Parameter | Min. | Typ. | Max. | Unit |
|-------------------------|--|------|------|------|------|
| V _{iH(OD5V)} | High-level input voltage | 1.5 | | 5.5 | V |
| V _{iL(OD5V)} | Low-level input voltage | -0.3 | | 0.8 | V |
| V _{iH(OD3.3V)} | High-level input voltage | 1.5 | | 3.6 | V |
| V _{iL(OD3.3V)} | Low-level input voltage | -0.3 | | 0.8 | V |
| R _{Pu/Pd} | No built-in pull up/down resistor on OD IO | - | - | - | ohm |
| I _o | OD IO driving low capability | 4 | | 6 | mA |
| VOL | Output low level with min I _o loading | | | 0.4 | V |

Note:

1. With Minimal I_{oL} driving capability loading, I_o is guaranteed to meet Vol<0.4V spec
2. Maximal GPIO loading is 6mA for application such as driving LED, which does not care about Vol spec.
3. The V_{iL}/V_{iH} of OD PAD is irrelevant to VDDIO voltage
4. "OD 5V" means that in applications such as I2C, use a resistor greater than 1Kohm to pull it up to 5V. Do not connect the pad directly to the 5V power supply.

4.5.3 DDR3/DDR3L/DDR4/LPDDR3/LPDDR4 SDRAM Specifications

Recommended Operating Conditions

| Symbol | Parameter | Min. | Typ. | Max. | Unit |
|------------------|--------------------------------|-----------|----------|-----------|------|
| VDDQ | IO supply voltage(DDR3) | 1.425 | 1.50 | 1.57 | V |
| VDDQ | IO supply voltage(DDR3L) | 1.283 | 1.35 | 1.45 | V |
| VDDQ | IO supply voltage(DDR4) | 1.14 | 1.20 | 1.30 | V |
| VDDQ | IO supply voltage(LPDDR3) | 1.14 | 1.2 | 1.30 | V |
| VDDQ | IO supply voltage(LPDDR4) | 1.06 | 1.1 | 1.17 | V |
| V _{ref} | Input reference supply voltage | 0.49*VDDQ | 0.5*VDDQ | 0.51*VDDQ | V |

Note: The minimal VDDQ voltage in sleep mode is defined by memory.

DC specifications - DDR3/DDR3L mode

| Symbol | Parameter | Min. | Typ. | Max. | Unit |
|-----------------|-----------------------|--------------------------|------|-------------------------|------|
| V _{IH} | DC input voltage high | V _{ref} + 0.100 | | VDDQ | V |
| V _{IL} | DC input voltage low | VSSQ | | V _{ref} -0.100 | V |
| V _{OH} | DC output logic high | 0.8*VDDQ | | | V |
| V _{OL} | DC output logic low | | | 0.2*VDDQ | V |

| | | | | | |
|-----|--|-----|-----|-----|-----|
| RTT | Input termination resistance to VDDQ/2 | 100 | 120 | 140 | ohm |
| | | 54 | 60 | 66 | |
| | | 36 | 40 | 44 | |

DC specifications – DDR4 mode

| Symbol | Parameter | Min. | Typ. | Max. | Unit |
|-------------|--------------------------------------|----------|------|----------|------|
| VdIVW_total | Rx Mask voltage-p-p total | | | 136 | mv |
| VOH | DC output logic high | 0.9*VDDQ | | | V |
| VOL | DC output logic low | | | 0.1*VDDQ | V |
| RTT | Input termination resistance to VDDQ | 200 | 240 | 280 | ohm |
| | | 100 | 120 | 140 | |
| | | 67 | 80 | 93 | |
| | | 50 | 60 | 70 | |
| | | 42 | 48 | 56 | |
| | | 34 | 40 | 46 | |
| | | 28 | 34 | 40 | |

DC Specifications – LPDDR3 mode

| Symbol | Parameter | Min. | Typ. | Max. | Unit |
|--------|--------------------------------------|--------------|------|------------|------|
| VIH | DC input voltage high | Vref + 0.100 | | VDDQ | V |
| VIL | DC input voltage low | VSSQ | | Vref-0.100 | V |
| VOH | DC output logic high | 0.9*VDDQ | | | V |
| VOL | DC output logic low | | | 0.1*VDDQ | V |
| RTT | Input termination resistance to VDDQ | 100 | 120 | 140 | ohm |
| | | 200 | 240 | 280 | |

DC Specifications – LPDDR4 mode

| Symbol | Parameter | Min. | Typ. | Max. | Unit |
|--------|--------------------------------------|----------|------|----------|------|
| VOH | DC output logic high | 0.9*VDDQ | - | - | V |
| VOL | DC output logic low | - | - | 0.1*VDDQ | V |
| RTT | Input termination resistance to VDDQ | 216 | 240 | 264 | ohm |
| | | 108 | 120 | 132 | |
| | | 72 | 80 | 88 | |
| | | 54 | 60 | 66 | |
| | | 43.2 | 48 | 52.8 | |
| | | 36 | 40 | 44 | |

4.6 Recommended Oscillator Electrical Characteristics

A311D requires the 24MHz oscillator for generating the main clock source.

Table 4-1. 24MHz Oscillator Specification

| Symbol | Description | Min. | Typ. | Max. | Unit | Notes |
|-------------------|------------------------------|------|------|------|------|--------------|
| F _o | Nominal Frequency | | 24 | | MHz | |
| Δf/f _o | Frequency Tolerance | -30 | | +30 | ppm | At 25 °C |
| | | -50 | | +50 | ppm | At -20~85 °C |
| C _L | Load Capacitance | 7.5 | 12 | 12.5 | pF | |
| ESR | Equivalent Series Resistance | | | 100 | oHm | |

Note:

- 10ppm Tolerance is preferred if 24MHz XTAL is also driving WIFI module.
- For user external clock source, Please connect input clock output to SYS_OSCIN, let SYS_OSCOUT floating.
- The threshold of Xin inverter is around 0.9V (Xin range: -0.3V to +2.1V). Therefore, Following suggestion for input clock.
 - Suggestion 1: Without DC blocking capacitor, use a higher Vpp output TCXO. The high voltage should be higher than 1.35V (VSWING >1.35V, 0V to >1.35V).
 - Suggestion 2: With DC blocking capacitor, re-bias the middle voltage at 0.9V, VSWING >2*0.45V;

4.7 Timing Information

4.7.1 I2C Timing Specification

The I2C master interface Fast/Standard mode timing specifications are shown below.

Figure 4-1. I2C Interface Timing Diagram, FS mode

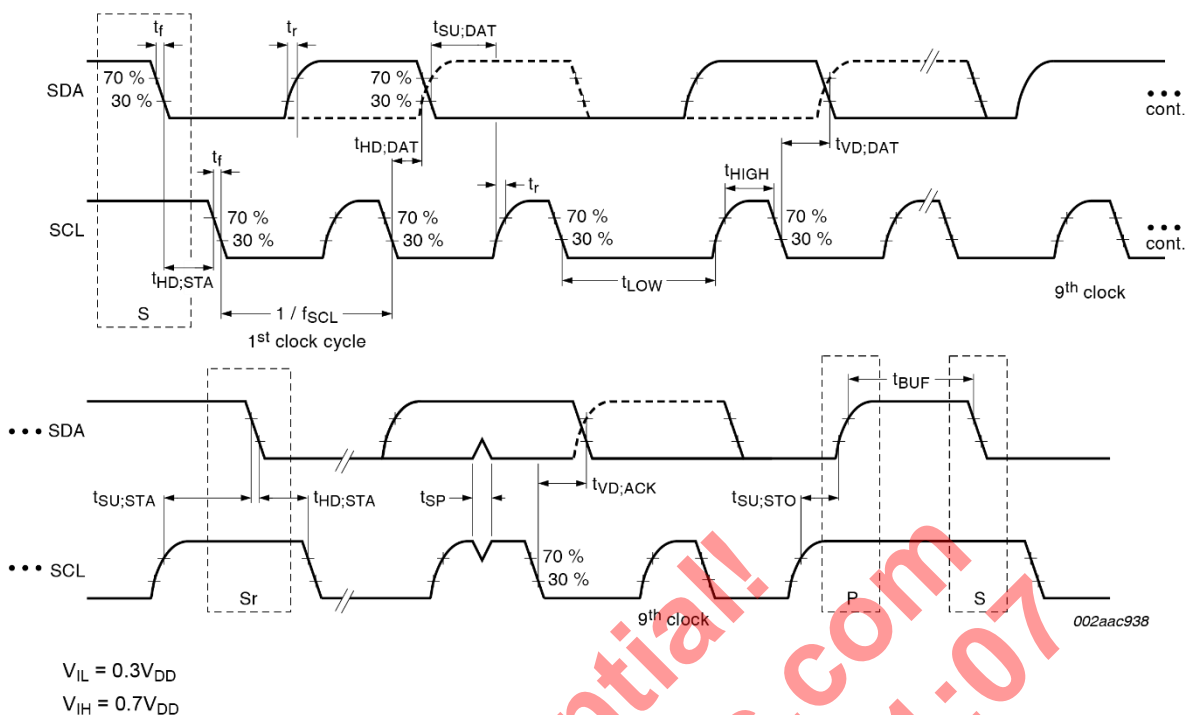

Table 4-2. I2C Interface Timing Specification, SF mode

| Symbol | Parameter | Standard-mode | | Fast-mode | | Unit |
|--------------|--------------------------------------|---------------|------|-----------|-----|---------|
| | | Min. | Max | Min | Max | |
| t_R | Rise time of SDA and SCL signals | - | 1000 | - | 300 | ns |
| t_F | Fall time of SDA and SCL signals | - | 300 | - | 300 | ns |
| f_{SCL} | SCL clock frequency | - | 100 | - | 400 | KHz |
| t_{LOW} | LOW period of the SCL clock | 4.7 | - | 1.3 | - | μs |
| t_{HIGH} | HIGH period of the SCL clock | 4.0 | - | 0.6 | - | μs |
| $t_{Su;STA}$ | Setup time for START | 4.7 | - | 0.6 | - | μs |
| $t_{Su;DAT}$ | Setup time for SDA | 250 | - | 100 | - | ns |
| $t_{Su;STO}$ | Setup time for STOP | 4.0 | - | 0.6 | - | μs |
| $t_{Hd;STA}$ | Hold time for START | 4.0 | - | 0.6 | - | μs |
| $t_{Hd;DAT}$ | Hold time for SDA | 0 | 3.45 | 0 | 0.9 | μs |
| t_{Buf} | Bus free time between stop and start | 4.7 | - | 1.3 | - | μs |

Note:

Driving strength of OD pin is not adjustable.

4.7.2 EMMC/SDIO Timing Specification

Timing specification for EMMC and SD are shown as below.

Figure 4-2. EMMC HS200 Data Output Timing

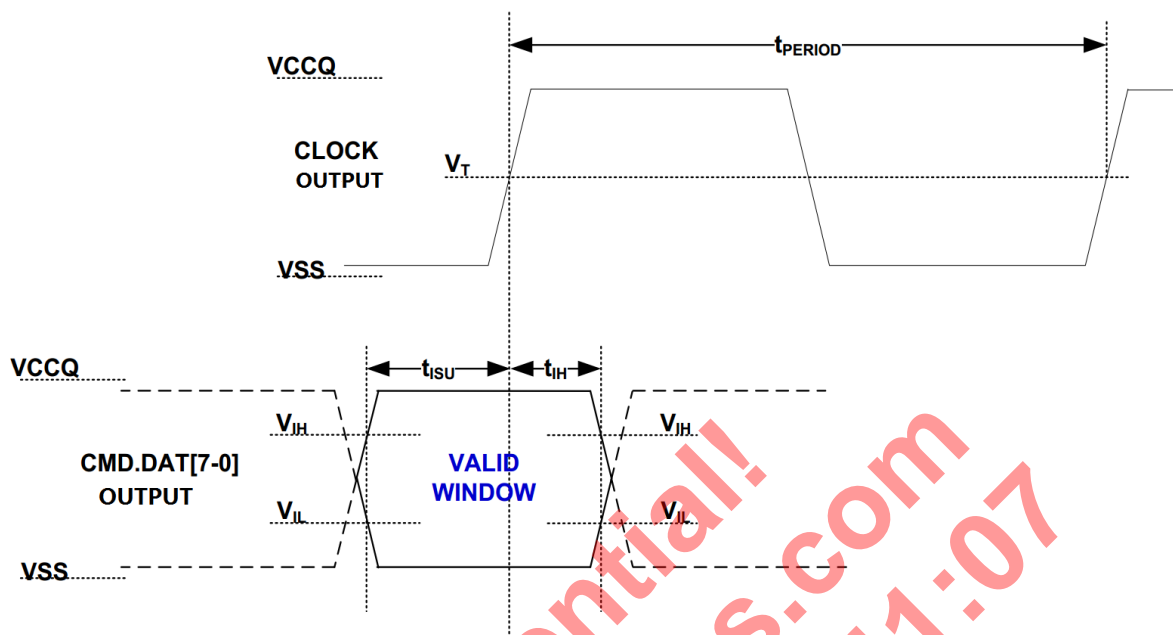

Table 4-3 HS200 Timing Specification

| Symbol | Parameter | Min | Max | Unit |
|---------|-------------------------------|-----|-----|------|
| tPERIOD | Cycle time data transfer mode | 5 | - | ns |
| tISU | output set-up time | 1.4 | - | ns |
| tIH | output hold time | 0.8 | - | ns |

Figure 4-3. EMMC H200 Data Input Timing

Table 4-4 HS200 Timing Specification

| Symbol | Parameter | Min | Max | Unit |
|--------|---|-------------------|------------------|------|
| tPH | Device output momentary phase from CLK input to CMD or DAT line output. Does not include a longterm temperature drift. | 0 | 2 | UI |
| ΔTPH | Delay variation due to temperature change after tuning. Total allowable shift of output valid window (TVW) from last system Tuning procedure ΔTPH is 2600ps for ΔT from -25 °C to 125 °C during operation. | -350(ΔT=-20deg.C) | 1550(ΔT=90deg.C) | ps |
| tVW | Valid Data Simple window | 0.575 | - | UI |

Figure 4-4. SDIO(SDR104) Clock Signal Timing Diagram

Table 4-5 SDIO(SDR104) Clock Timing Specification

| Symbol | Parameter (SDR104 Mode) | Min | Max | Unit |
|--------|-------------------------------------|-----|------|------|
| tCLK | clock period Data Transfer Mode(PP) | 4.8 | - | ns |
| Duty | Clock Duty | 30 | 70 | % |
| tCR | clock rise time | - | 0.96 | ns |
| tCF | clock fall time | - | 0.96 | ns |

Figure 4-5. SDIO(SDR104) Output Timing Diagram

Table 4-6 SDIO(SDR104) Timing Specification

| Inputs CMD, DAT (referenced to CLK) | | | | |
|-------------------------------------|-------------------|-----|-----|------|
| Symbol | Parameter | Min | Max | Unit |
| t_{IS} | input set-up time | 1.4 | - | ns |
| t_{IH} | input hold time | 0.8 | - | ns |

Note:SD card interface uses SDIO protocol

4.7.3 NAND Timing Specification

Nand timing specifications are shown as below.

Figure 4-6 Async Waveform for Command/Address/Data Output Timing

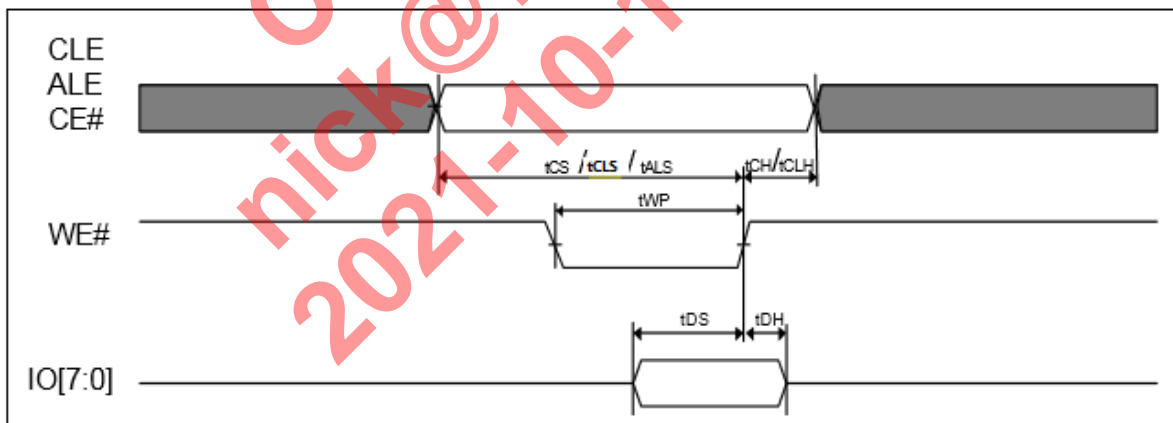

Figure 4-7 Async Waveform for Address Output Cycle

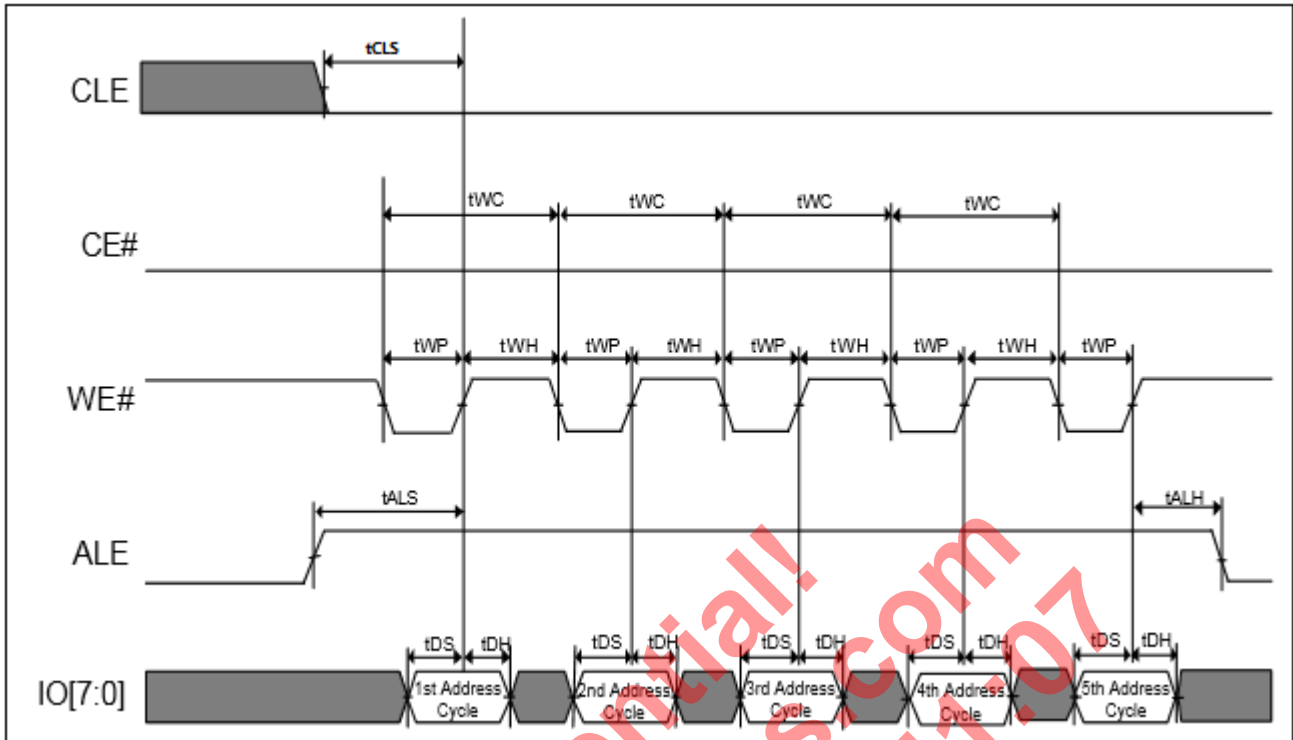

Figure 4-8 Async Waveform for Sequential Data Read Cycle(After Read)-EOD Mode

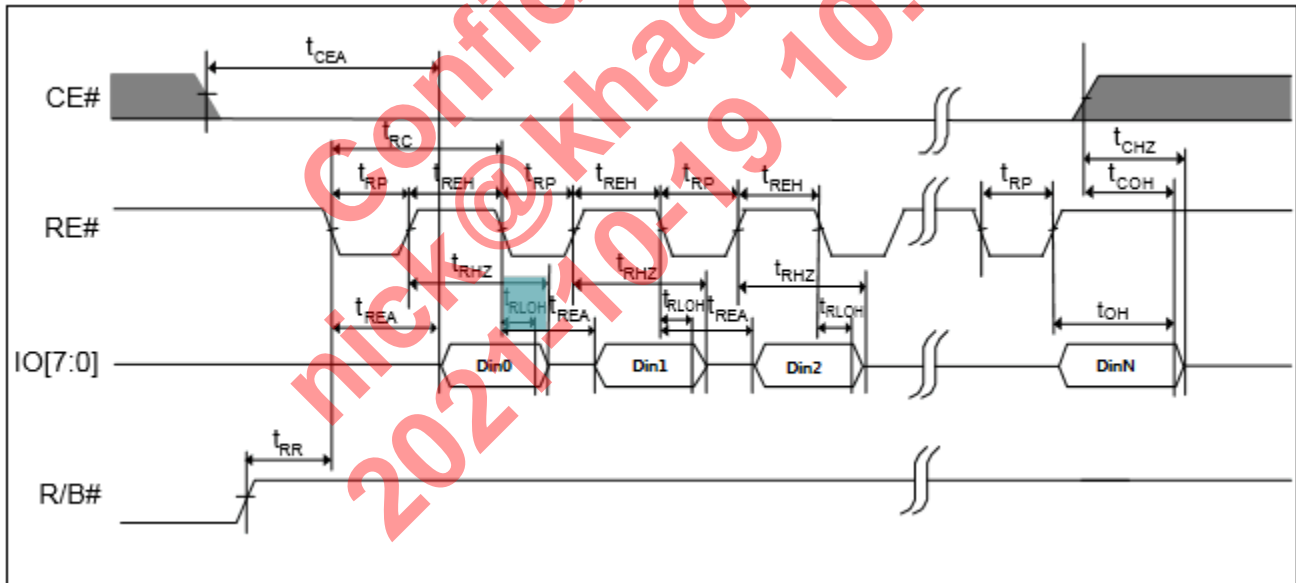

Table 4-7 Nand Timing Specifications

| Symbol | Parameter(Asynchronous) (mode 5) | Min | Max | Unit |
|--------|----------------------------------|-----|-----|------|
| tCLS | CLE setup time | 10 | - | ns |
| tCLH | CLE hold time | 5 | - | ns |
| tALS | ALE setup | 10 | - | ns |
| tALH | ALE hold | 5 | - | ns |
| tDS | Data setup time | 7 | - | ns |
| tDH | Data hold time | 5 | - | ns |
| tWC | WE# cycle time | 20 | - | ns |
| tWP | WE# pulse width | 10 | - | ns |
| tWH | WE# high lold time | 7 | - | ns |
| tREA | RE# access time | - | 16 | ns |
| tOH | Data output hold time | 15 | - | ns |
| tRLOH | RE#-low to data hold time (EDO) | 5 | - | ns |
| tRP | RE# pulse width | 10 | - | ns |
| tREH | RE# high hold time | 7 | - | ns |
| tRC | RE# cycle time | 20 | - | ns |

4.7.4 SPICC Timing Specification

Figure 4-9. SPICC Timing Diagram

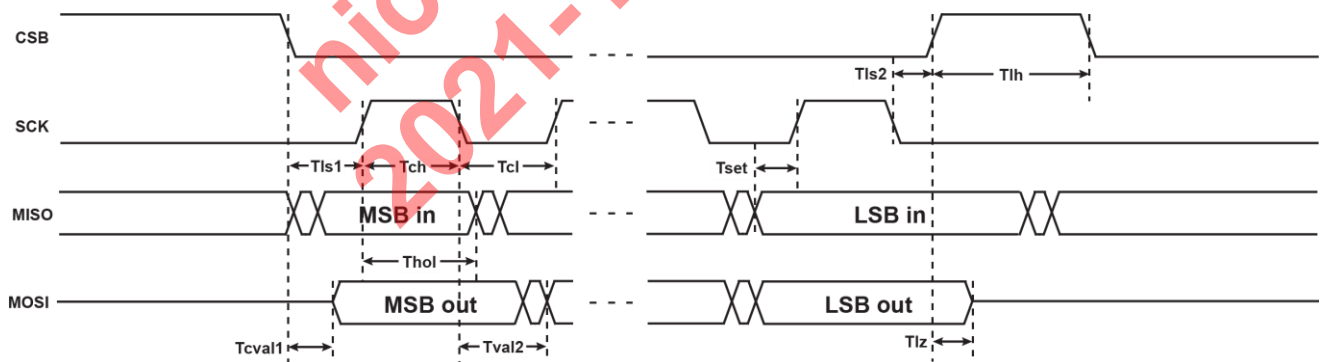

Table 4-8. SPICC Master Timing Specification

| Symbol | Description | Min. | Max. | Unit |
|--------|---|------|------|------|
| fCLK | Clock Frequency | 1 | 80 | MHz |
| TCH | Clock high time | 5 | | ns |
| TCL | Clock low time | 5 | | ns |
| TLS1 | CS fall to First Rising CLK Edge | 50 | | ns |
| TSET | Data input Setup Time | 4 | | ns |
| THOL | Data input Hold Time | 4 | | ns |
| TLH | Minimum idling time between transfers(minimum ss high time) | 5 | | ns |

4.7.5 SPIFC Timing Specification

Figure 4-10. SPIFC Serial Input Timing Diagram

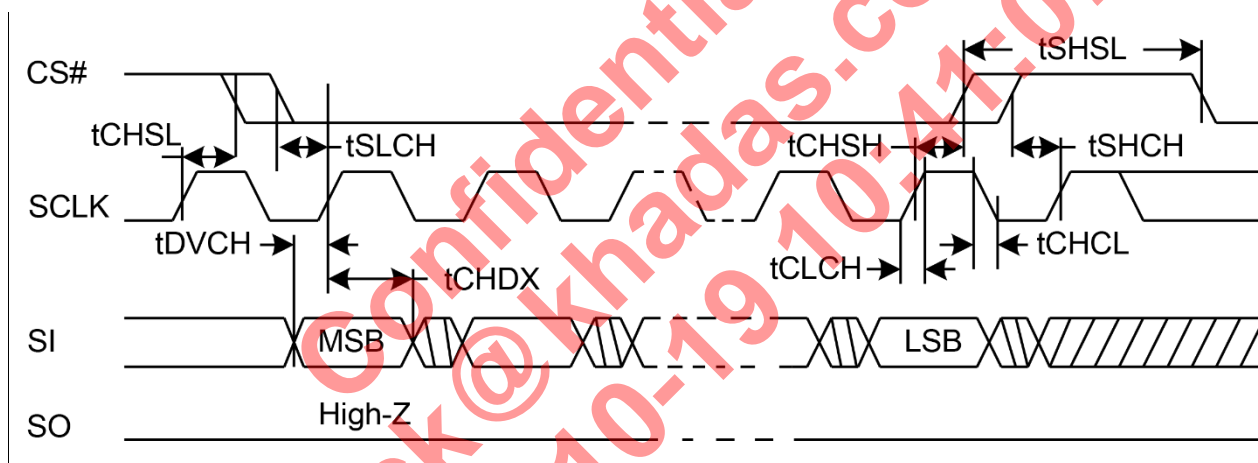

Figure 4-11. SPIFC Out Timing Diagram

Table 4-9. SPIFC Master Timing Specification

| Symbol | Parameter(Clock 41.7MHz) | Min | Max | Unit |
|--------|--|-----|-----|------|
| fRCLK | Clock Frequency for READ instructions | | 50 | Mhz |
| tCH | Clock High Time | 8 | | ns |
| tCL | Clock Low Time | 8 | | ns |
| tCLCH | Clock Rise Time (peak to peak) | 0.1 | | V/ns |
| tCHCL | Clock Fall Time (peak to peak) | 0.1 | | V/ns |
| tSLCH | CS# Active Setup Time (relative to SCLK) | 4 | - | ns |
| tCHSH | CS# Active Hold Time (relative to SCLK) | 4 | - | ns |
| tDVCH | Data In Setup Time | 2 | - | ns |
| tCHDX | Data In Hold Time | 3 | - | ns |
| tSHQZ | Output Disable Time (relative to CS#) | | 8 | ns |
| tCLQV | Clock Low to Output Valid | | 6 | ns |
| tCLQX | Output Hold Time | 1 | | ns |

4.7.6 Ethernet Timing Specification

Figure 4-12. Management Data Timing Diagram

Table 4-10. Management Data Timing Specification

| Symbol | Description | Min. | Typ. | Max. | Unit | Notes |
|--------|----------------------------------|------|------|------|------|----------|
| tMDC | MDC clock Period | 400 | 500 | | ns | From MAC |
| tMDCSU | Setup time to rising edge of MDC | 10 | | | ns | |
| tMDCHD | Hold time to rising edge of MDC | 10 | | | ns | |

Figure 4-13. RMII Timing Diagram

Table 4-11. RMII Timing Specification

| Symbol | Description | Min. | Typ. | Max | Unit | Notes |
|--------------|---|------|------|-----|------|----------------|
| t_{REFCLK} | RMII clock period | | 20 | | ns | 50MHz from PHY |
| t_{OSU} | TXD & TX_EN setup time to rising edge of RMII clock | 1.8 | 10 | | ns | To PHY |
| t_{OHD} | TXD & TX_EN hold time to rising edge of RMII clock | 1.4 | 10 | | ns | To PHY |
| t_{ISU} | RXD & DV setup time to rising edge of RMII clock | 1.0 | 10 | | ns | From PHY |
| t_{IHD} | RXD & DV hold time to rising edge of RMII clock | 1.0 | 10 | | ns | From PHY |

Figure 4-14. RGMII Receive Timing Diagram

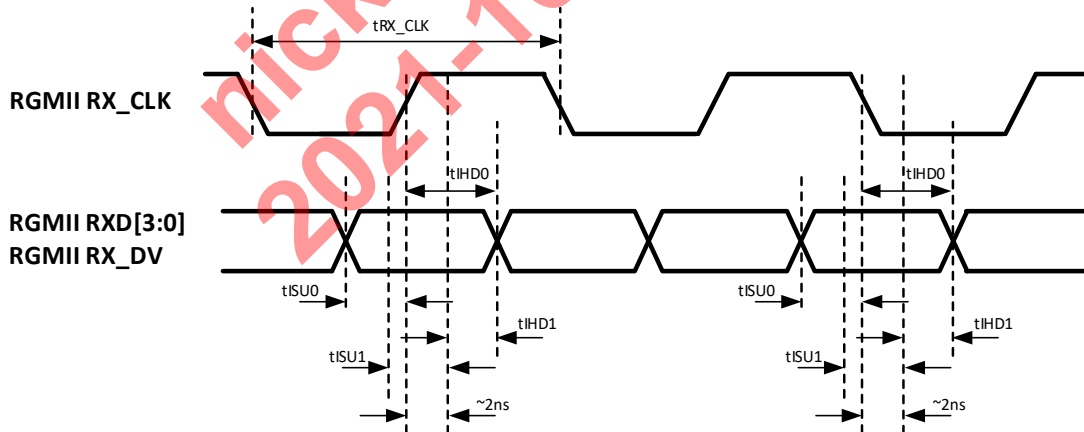

Table 4-12. RGMII Receive Timing Specification

| Symbol | Description | Min. | Typ. | Max | Unit | Notes |
|---------------|---------------------------|------|------|-----|------|-----------------|
| t_{RX_CLK} | RGMII RX_CLK clock period | | 8 | | ns | 125MHz from PHY |

| | | | | | | |
|--------|---|------|--|-----|----|----------|
| tSETUP | RXD[3:0] & RX_DV setup time (PHY internal delay enabled) | 1.2 | | | ns | From PHY |
| tHOLD | RXD[3:0] & RX_DV hold time (PHY internal delay enabled) | 1.2 | | | ns | From PHY |
| tSKEW | RXD[3:0] & RX_DV skew between these 5 signals (PHY internal delay disabled) | -0.5 | | 0.5 | ns | From PHY |

When PHY internal delay is enabled, check setup/hold timing.

When PHY internal delay is disabled, check signal skew.

Figure 4-15. RGMII Transmit Timing Diagram

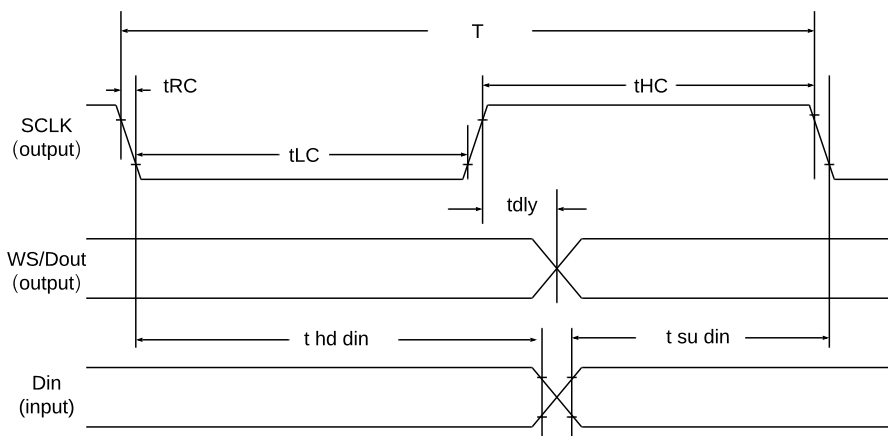

Table 4-13. RGMII Transmit Timing Specification

| Symbol | Description | Min. | Typ. | Max | Unit | Notes |
|---------|---|------|------|-----|------|---------------|
| tTX_CLK | RGMII TX_CLK clock period | | 8 | | ns | 125MHz to PHY |
| tOSU | TXD & TX_EN setup time to rising edge of RGMII clock (no clock delay added) | 1 | | | ns | From PHY |
| | TXD & TX_EN setup time to rising edge of RGMII clock (clock delay added) | -0.9 | | | ns | From PHY |
| tOHD | RXD & DV hold time to rising edge of RGMII clock (no clock delay added) | 0.8 | | | ns | From PHY |
| | RXD & DV hold time to rising edge of RGMII clock (clock delay added) | 2.7 | | | ns | From PHY |

4.7.7 Audio Timing Specification

There are two modes for the audio I2S/TDM interface: Master mode and Slave mode, as shown below.

Figure 4-16 Output Data of SCLK Rising Edge TDM/I2S Timing, Master Mode

Note: Input data was sampled on SCLK rising/falling edge via software setting.

Figure 4-17 Output Data of SCLK Falling Edge TDM/I2S Timing, Master Mode

Note: Input data was sampled on SCLK rising/falling edge via software setting.

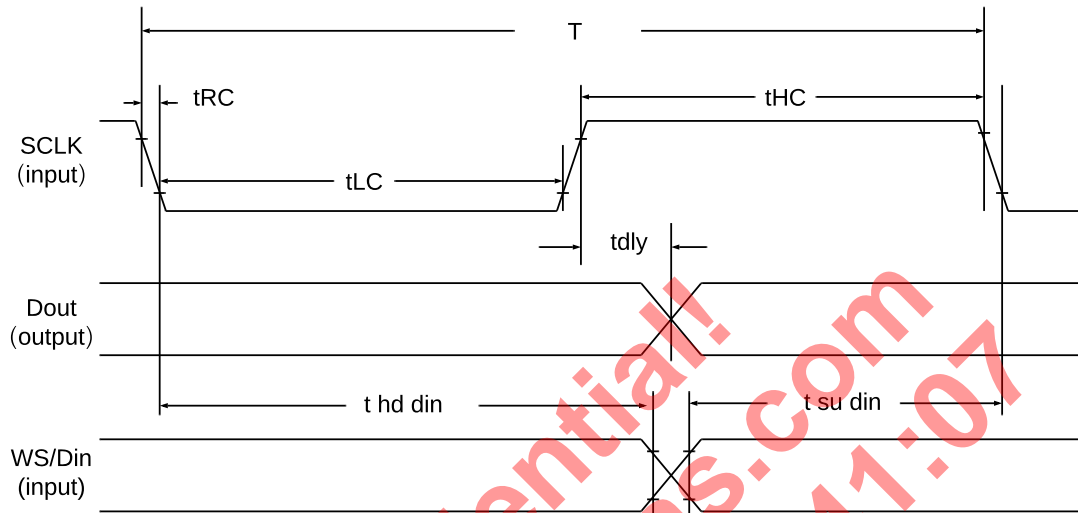

Table 4-14 Audio I2S/TDM Timing Specification, Transmitter, Master Mode

| Transmitter (master mode) | | | | | |
|---------------------------|-----------------------|------|-----|------|------|
| Symbol | Parameter | Min | Typ | Max | Unit |
| T | Clock period | 10 | | | ns |
| tHC | High level of SCLK | 0.35 | | | T |
| tLC | Low level of SCLK | 0.35 | | | T |
| tRC | Edge time of SCLK | | | 0.15 | T |
| tdly | Delay from SCLK to WS | -2 | 3 | 5 | |
| Tsu din | Setup time of Din | 4 | | | ns |

| Transmitter (master mode) | | | | | |
|---------------------------|------------------|-----|-----|-----|------|
| Symbol | Parameter | Min | Typ | Max | Unit |
| Thd din | Hold time of Din | 4 | | | ns |

Note: Measure point refer to parameter Vih, ViL of Normal GPIO specifications.

Figure 4-18 Output Data of SCLK Rising Edge TDM/I2S Timing, Slave Mode

Note: Input data was sampled on SCLK rising/falling edge via software setting.

Figure 4-19 Output Data of SCLK Falling Edge TDM/I2S Timing, Slave Mode

Note: Input data was sampled on SCLK rising/falling edge via software setting.

Table 4-15 Audio I2S/TDM Timing Specification, Transmitter, Slave Mode

| Transmitter (slave mode) | | | | | |
|--------------------------|-----------------------------|------|-----|------|------|
| Symbol | Parameter | Min | Typ | Max | unit |
| T(out) | Clock period | 40 | | | ns |
| T(in) | Clock period | 10 | | | ns |
| tHC | High level of SCLK | 0.35 | | | T |
| tLC | Low level of SCLK | 0.35 | | | T |
| tRC | Edge time of SCLK | | | 0.15 | T |
| tsu din | Setup time of WS/Din | 4 | | | ns |
| thd din | Hold time of WS/Din | 4 | | | ns |
| tdly | Delay between SCLK and Dout | 2 | 12 | 15 | ns |

Note: Measure point refer to parameter Vih, ViL of Normal GPIO specifications.

4.7.8 PDM Timing Specification

Figure 4-20 PDM Timing Diagram

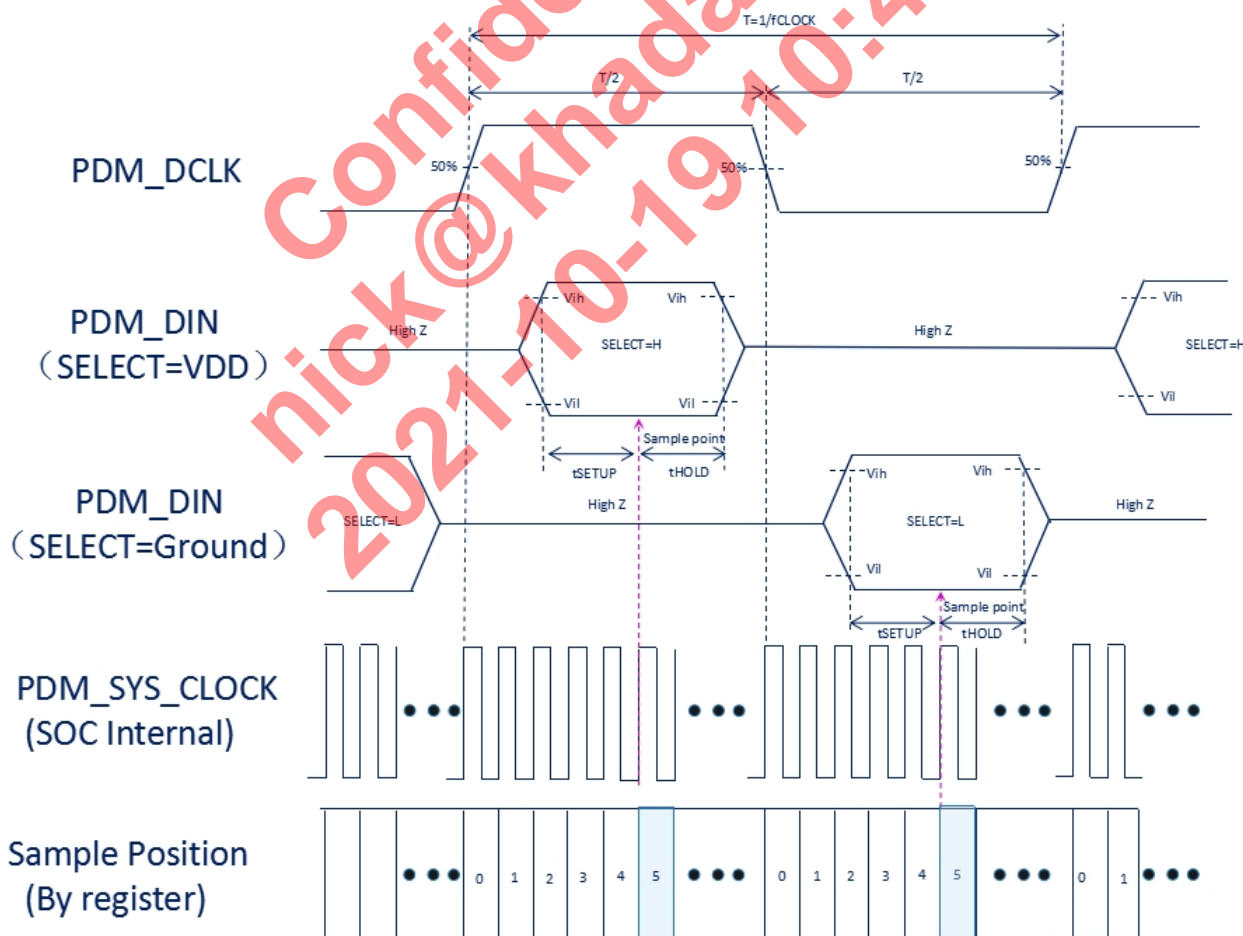

Table 4-16 PDM Timing Specification

| Parameter | Symbol | Min. | Typ. | Max. | Units. |
|----------------------|------------|------|------|------|--------|
| PDM clock period | tDCLK | 200 | | | ns |
| PDM clock duty cycle | tHIGH/tLOW | 48% | | 52% | tDCLK |
| PDM Data setup time | tSETUP | 20 | | | ns |
| PDM Data hold time | tHOLD | 20 | | | ns |
| Sys clock period | tSYSCLK | 5 | 7.5 | | ns |

Note:

1.Default PDM_SYS_CLOCK=133MHz

2.For Sample position, please refer to PDM register PDM_CHAN_CTRL,PDM_CHAN_CTRL1

4.8 Power Consumption

Note: Value listed here is estimated typical max value tested. Enough margin in circuit needs to be reserved.

| Symbol | Maximum Current | Note |
|----------|-----------------|---|
| VDDCPU_A | 6 A | - |
| VDDCPU_B | 1.2A | |
| VDD_EE | 4 A | - |
| VDD_DDR | 400 mA | |
| VDDQ | 600 mA | Note: Peak SOC + DRAM VDDQ current is up to 1.5A with 2 ranks DDR3. |

| Symbol | Typical current | Maximum current | Note |
|------------------|-----------------|-----------------|--|
| VDD18_AO_XTAL | 1 mA | - | EFUSE: Max 100 mA when programing EFUSE. |
| VDDAO_0V8 | 22 mA | - | - |
| AVDD0V8_USB_PCIE | 58 mA | - | |
| AVDD0V8_HDMI | 23 mA | - | At 6 Gbps mode |
| AVDD_DDRPLL | 6 mA | - | |
| AVDD18_ENET | 40 mA | - | - |
| AVDD18_AUDIO | 4 mA | 6.6 mA | - |
| AVDD18_PCIE | 45mA | - | At 5 Gbps mode |
| AVDD18_HDMI | 3.3 mA | - | - |
| AVDD18_SARADC | 1.2 mA | | |
| AVDD18_CVBS | | 48 mA | |
| AVDD18_MIPIDSI | 40 mA | | |
| AVDD18_MIPICSI | 40 mA | - | |
| AVDD18_USB | 13.8 mA | 17 mA | Per channel |
| AVDD33_USB | 7 mA | - | Per channel |
| AVDD18_DPLL | 35 mA | -- | |
| VDDIO | - | - | Note |

Note:

VDDIO=1.8V, DS=3, output 200MHz clock:

- 1) IO pad itself consumes about 1.4mA.
- 2) Driving a 55ohm trace with length of 50mm and width of 0.1mm will consumes about 2.8mA additional current (low impedance trace consumes more power)
- 3) Base #2, add 5pF cap will consumes about 1.8mA additional current, total about 6mA
- 4) When VDDIO=3.3V, GPIO consumes about 70% higher current, about 13mA
- 5) Internal & external pull down resistor consumes additional current

4.9 Storage and Baking Conditions

The processor is moisture-sensitive device of MSL level 3, defined by IPC/JEDEC J-STD-020. Please follow the storage and backing guidelines.

- 1) Calculated shelf life in sealed bag: 12 months at <math><40^{\circ}\text{C}</math> and <math><90\%</math> relative humidity (RH).
- 2) After bag is opened, devices that will be subjected to reflow solder or other high temperature process must be
 - a) Mounted with 168 hours of factory conditions $\leq 30^{\circ}\text{C}/60\% \text{RH}$, or
 - b) Stored per J-STD-033
- 3) Devices require bake, before mounting, if Humidity Indicator Card reads >10%.
- 4) If baking is required, refer IPC/JEDEC J-STB-033 for baking process.

5. Power On Config

3 Boot pins are used as power on config (POC) pins, to set the booting sequence.

POC setting is latched at the rising edge of reset signal.

3 POC pins are all pull high internal, CPU will try to boot from nand/eMMC first, if fails than try to boot from SD CARD, still fails then try to boot from USB (PC).

External 4.7K ohm pull down resistors can be used to change the POC setting. The resistors should be placed on right location, avoid stubs on high speed signals.

A311D’s Power On Configuration is listed as following:

Table 5-1. Power On Configuration Pin Table

| POC | Boot Pin | Name | Pull low | Pull high |
|------|----------|----------------|---------------------|------------------|
| POC0 | Boot [4] | SPI NAND First | SPI NAND boot first | Default sequence |
| POC1 | Boot [5] | USB First | USB boot first | Default sequence |
| POC2 | Boot [6] | SPI NOR First | SPI NOR first | Default sequence |

Booting Sequence Diagram

| No. | POC_0 (SPI_NAND) | POC_1 (USB_BOOT) | POC_2 (SPI_NOR, eMMC/NAND) | 1st Boot device | 2nd Boot device | 3rd Boot device | 4th Boot device |
|-----|------------------|------------------|----------------------------|-------------------|-----------------|-----------------|-----------------|
| 1 | 0 | 0 | 0 | USB (short delay) | SPI_NOR | NAND/eMMC | SD Card |
| 2 | 0 | 0 | 1 | USB (short delay) | NAND/eMMC | SD Card | - |
| 3 | 0 | 1 | 0 | SPI_NOR | NAND/eMMC | SD Card | USB |
| 4 | 0 | 1 | 1 | SPI_NAND | NAND/eMMC | USB | - |
| 5 | 1 | 0 | 0 | USB (short delay) | SPI_NOR | NAND/eMMC | SD Card |
| 6 | 1 | 0 | 1 | USB (short delay) | NAND/eMMC | SD Card | - |
| 7 | 1 | 1 | 0 | SPI_NOR | NAND/eMMC | SD Card | USB |
| 8 | 1 | 1 | 1 | NAND/eMMC | SD Card | USB | - |

Note:

If GPIOC is not work as SDIO port, please do not pull CARD_DET(GPIOC_6) low when system booting up, to avoid romcode trying to boot from SD CARD.

6. Recommended Power on/down Sequence

Example power on sequence:

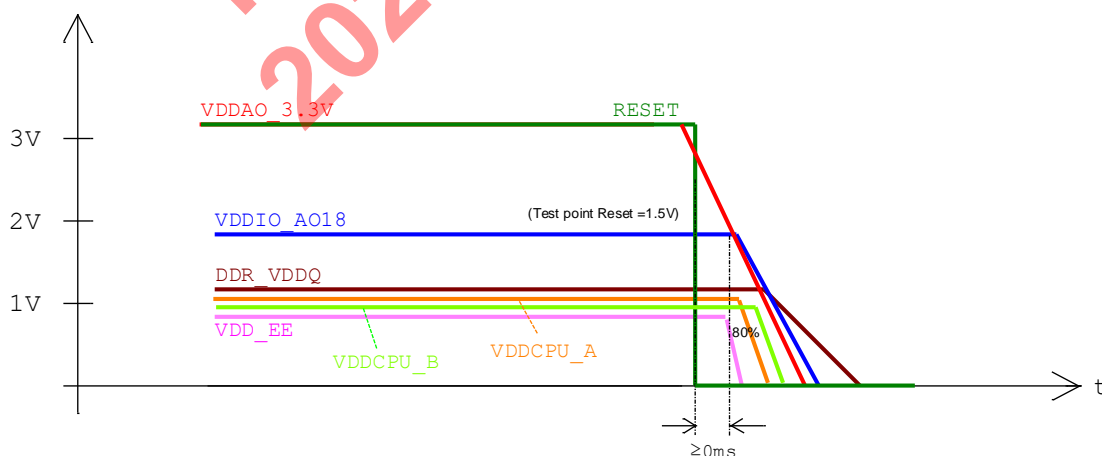

Note:

- 1) All test values refer to 80% of typical power voltage.
- 2) VDDAO_3.3V & VCC3.3V should ramp up > 0.5ms later than VDD_EE.
- 3) All power sources should get stable within 20ms (except for DDR_VDDQ).
- 4) No sequence requirement between VDD18_AO and VDD_EE. No sequence requirement between VDDCPU_A & VDDCPU_B & DDR_VDDQ and other power source.
- 5) VDDIO_AO18 should ramps up earlier or at the same time with VDDAO_3.3V & VCC3.3V, VDDAO_3.3V & VCC3.3V should never be 2.5V higher than VDD18_AO.
- 6) RESET_n should keep low for at least 40ms after power up (except DDR_VDDQ).

Please refer to reference schematics.

Example of power down sequence:

Power OFF Sequence

Note:

A reset IC should monitor VDDIO3.3V, output lower (lower than 1.5V) before other power rails turning off. There is no power off sequence between other power rails.

7. Mechanical Dimensions

The A311D processor comes in a 52x46 ball matrix FCBGA RoHS package. The mechanical dimensions are given in millimeters as the following figures.

Figure 7-1 Dimensions

8. System

This part describes the A311D system architecture from the following aspects:

- MEMORY MAP
- POWER DOMAIN
- CPU and GPU SUBSYSTEM
- CLOCK AND RESET UNIT
- SYSTEM BOOT
- GENERAL PURPOSE INPUT/OUTPUT (GPIO)
- INTERRUPT CONTROLLER
- DIRECT MEMORY ACCESS CONTROLLER (DMAC)
- TIMER
- Crypto

8.1 Memory Map

A311D's memory map is listed as following in Table 8-1.

Table 8-1 A311D Memory Map

| START | END | REGION (NORMAL) |

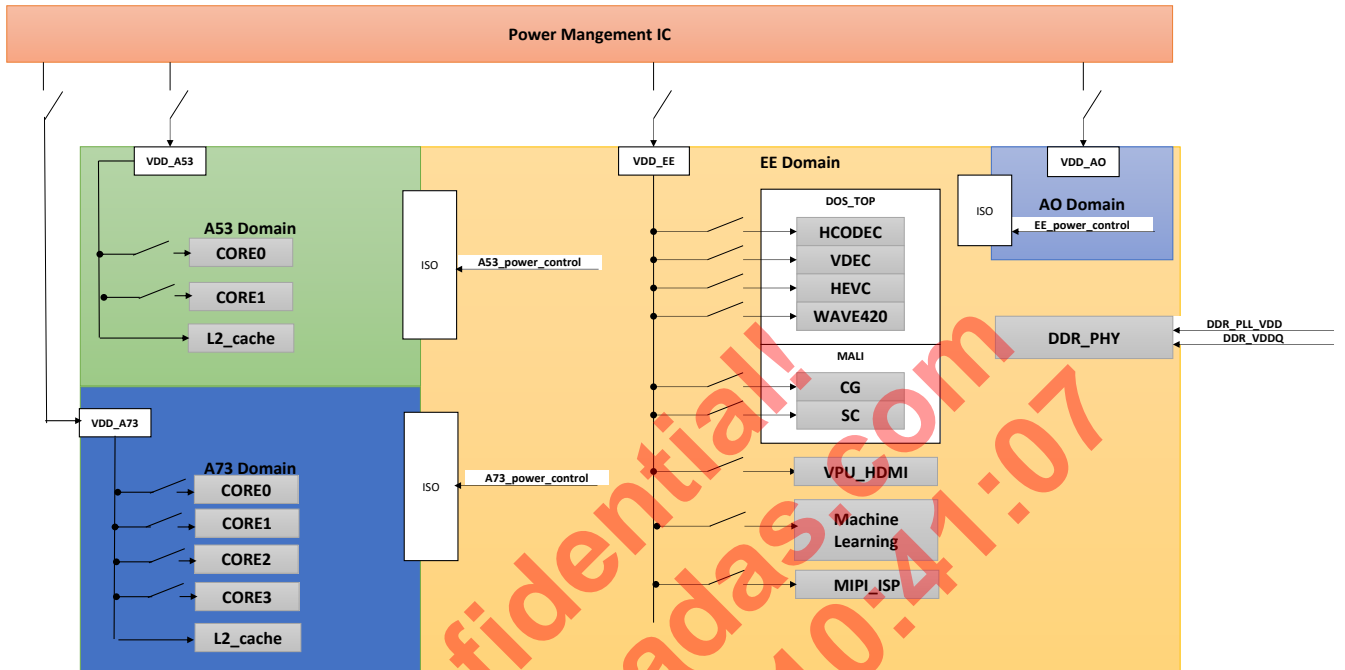

Figure 8-1 A311D DDR Bus

8.2 Power Domain

Figure 8-2 shows the power domain of A311D.

Figure 8-2 Power Domain

8.2.1 Top Level Power Domains

The power supplies for the different domains must follow a specific power supply order: The A53/A73 can't be powered without the EE domain. The EE domain can't be powered up without the AO domain. If you read Table 8-2 left to right then right to left, that's essentially the power up/down sequence for the entire chip.

Table 8-2 Power on Sequence of Different Power Domains

| | Always On | EE Domain | | A73 Domain | | | | A53 Domain | | |
|-----------------------------|-----------|-----------|----------------------|--|------|------|--------|------------|------|------|
| | Logic | EE Logic | Mali and DOS and VPU | L2 Cache | CPU0 | CPU1 | CPU2/3 | L2 Cache | CPU0 | CPU1 |
| STATE 0 All off | Off | OFF | | The A73 domain must be off if the EE domain is OFF | | | | OFF | OFF | OFF |
| STATE 1 AO ON only | ON | Off | OFF | The A73 domain must be off if the EE domain is OFF | | | | OFF | OFF | OFF |
| STATE 2 A53/A73 OFF only | On | On | ON/OFF | Off | Off | Off | Off | OFF | OFF | OFF |
| STATE 3 L2C ON only | On | On | ON/OFF | ON | Off | | Off | ON | OFF | OFF |
| STATE 4 SMP - example | On | On | ON/OFF | ON | On | | Off | ON | ON | OFF |
| STATE 5 SMP - example | On | On | ON/OFF | ON | On | | On | ON | ON | ON |

8.2.2 A53/A73 Big Little Power Modes

The A53 and a73 domain is the last to power up and the first to power down. The A73 domain itself consists of a quad (4) CPU, an L2 cache controller and an SCU. The A53 domain itself consists of a dual (2) CPU, an L2 cache controller and an SCU. The A53 CPU boots with the SCU/L2 powered and CPU0 powered. After CPU0 boots, subsequent CPU's can be enabled and disabled independently of one another using the control bits described below. A73 domain is default shut down. Before power on CPUs inside A73, should boot up SCU/L2. Then we can power on any cores of a73 domain. The flow-diagram below illustrates the transition to each legal state.

Table 8-3 Power On Sequence of A53

| A53 | CPU0 | CPU1 | A53_pwr |
|---|-----------------------|-----------------------|-----------------------|
| Domain Power Sleep bit (1 = power off) | Bit[2] 0xff8000E4 | Bit[4] 0xff8000E4 | |
| Domain Power Acknowledge bit | Bit[16] 0xff8000E4 | Bit[17] 0xff8000E4 | |
| Input Signal isolation bit (1 = isolated) | Bit[0] 0xff8000E0 | Bit[1] 0xff8000E0 | Bit[12] 0xff8000E0 |
| Output signal isolation bit (1 = isolated) | Bit[0] 0xff8000E0 | Bit[1] 0xff8000E0 | Bit[12] 0xff8000E0 |

Table 8-4 Power On Sequence of A73

| A73 | CPU0 | CPU1 | CPU2 | CPU3 | A73_pwr |
|---|-----------------------|-----------------------|-----------------------|-----------------------|-----------------------|
| Domain Power Sleep bit (1 = power off) | Bit[2] 0xff80034C | Bit[4] 0xff80034C | Bit[6] 0xff80034C | Bit[8] 0xff80034C | |

Figure 8-3 Power Sequence of A53/A73

8.2.3 EE Top Level Power Modes

EE domain is powered off by DC-DC. VDD_EE also share the same VDD with VDDCE of A53/A73 memory arrays. So if EE domains is shut off, A53/A73 memory is also shut off. That does not matter. Before EE power domain is shut off, A53/A73 should be shut off at first.

Table 8-5 Power Sequence of DOS

| DOS | VDEC | HEVC | HCODEC | HEVC ENCODER |
|---|------------------------|------------------------|------------------------|--------------------------|
| Domain Power Sleep bit (1 = power off) | Bit[3:2] 0XFF8000E8 | Bit[7:6] 0XFF8000E8 | Bit[1:0] 0XFF8000E8 | Bit[25:24] 0XFF8000E8 |
| Domain Power Acknowledge bit | Bit[1] 0XFF8000F0 | Bit[3] 0XFF8000F0 | Bit[0] 0XFF8000F0 | Bit[12] 0XFF8000F0 |
| Input Signal isolation bit (1 = isolated) | Bit[6] 0XFF8000EC | Bit[10] 0XFF8000EC | Bit[4] 0XFF8000EC | Bit[12] 0XFF8000EC |
| Output signal isolation bit (1 = isolated) | Bit[7] 0XFF8000EC | Bit[11] 0XFF8000EC | Bit[5] 0XFF8000EC | Bit[13] 0XFF8000EC |

8.2.4 Mali Power Modes

The G52 block sits within the EE domain and the G52 module itself has 4 distinct power domains:

- GL(Always ON[EE])
- CG(PD0)
- SC0(PD1)
- SC1 (PD2)

Power on sequence: GL→CG→(SC0,SC1)

Power off sequence: (SC0,SC1)→ CG → GL

8.2.5 Power/Isolation/Memory Power Down Register Summary

Below lists the registers related to power domain.

Each register final address = 0xFF800000 + offset * 4

AO_RTI_PWR_CNTL_REG0 0x04

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-24 | R | 0 | Unused |
| 17-16 | R/W | 0 | Unused |
| 15 | R/W | 0 | Unused |
| 14 | R/W | 1 | Set to 1 to enable the crystal clock throughout the AO domain. Set to 0 to disable the crystal clock (and therefore save power) |
| 13 | R/W | 0 | Reserved |
| 12-10 | R/W | 0 | ALT_32K_INPUT_SEL: 000 = XTAL generate 32k 001 = gpio pad |
| 9 | R/W | 1 | EE_RESET_N: This bit is OR'd with the RESET_N signal from the pad to generate a new signal called reset_n_to_ee. Reset_n_to_ee is the general reset for the entire Everything Else domain. Therefore, if EE_RESET_N is set low, the entire Everything Else domain is reset. |
| 8 | R/W | 0 | RTC_OSCIN_SEL: Set this bit to 1 to mux the RTC 32khz crystal in place of the clk81 signal that comes from the Everything Else domain to drive the Always On domain. |
| 7 | R/W | 0 | Unused |
| 6 | R/W | 0 | Unused |
| 5 | R/W | 0 | Unused |
| 4 | R/W | 0 | Ee_iso_in_en |
| 3 | R/W | 0 | Ee_iso_out_en |
| 2 | R/W | 0 | Unused |
| 1 | R/W | 0 | Reset_iso_en |
| 0 | R/W | 0 | Unused |

AO_RTI_PWR_SYS_CPU_CNTL0 0x38

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-30 | R | - | A53_pwrctli3 (readback) |
| 29-28 | R | - | A53_pwrctli2 (readback) |
| 27-26 | R | - | A53_pwrctli1 (readback) |
| 25-24 | R | - | A53_pwrctli0 (readback) |
| 23-22 | R/W | 0x3 | A53_pwrctli3 |
| 21-20 | R/W | 0x3 | A53_pwrctli2 |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------|
| 19-18 | R/W | 0x3 | A53_pwrctli1 |
| 17-16 | R/W | 0 | A53_pwrctli0 |
| 15-0 | R/W | 0 | unused |

AO_RTI_PWR_SYS_CPU_CNTL1 0x39

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------|
| 31-24 | R | 0 | unused |
| 23-16 | R | - | A53 sleep status |
| 15-10 | R/W | 0 | Unused |
| 9-8 | R/W | 3 | CPU3_SLEEP |
| 7-6 | R/W | 3 | CPU2_SLEEP |
| 5-4 | R/W | 3 | CPU1_SLEEP |
| 3-2 | R/W | 0 | CPU0_SLEEP |
| 1 | R/W | 0 | Unused |
| 0 | R/W | 0 | Unused |

AO_RTI_GEN_PWR_SLEEP0 0x3a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------|
| 31-8 | R/W | 0 | unused |
| 7 | R/W | 1 | DOS_HEVC_D1_PWR_OFF |
| 6 | R/W | 1 | DOS_HEVC_PWR_OFF |
| 5 | R/W | 1 | DOS_VDEC2_D1_PWR_OFF |
| 4 | R/W | 1 | DOS_VDEC2_PWR_OFF |
| 3 | R/W | 1 | DOS_VDEC1_D1_PWR_OFF |
| 2 | R/W | 1 | DOS_VDEC1_PWR_OFF |
| 1 | R/W | 1 | DOS_HCODEC_D1_PWR_OFF |
| 0 | R/W | 1 | DOS_HCODEC_PWR_OFF |

AO_RTI_GEN_PWR_ISO0 0x3b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------|
| 31-12 | R/W | 0 | unused |
| 11 | R/W | 1 | DOS_HEVC_OUT_EN |

| | | | |
|----|-----|---|-----------------------|

8.3 System Booting

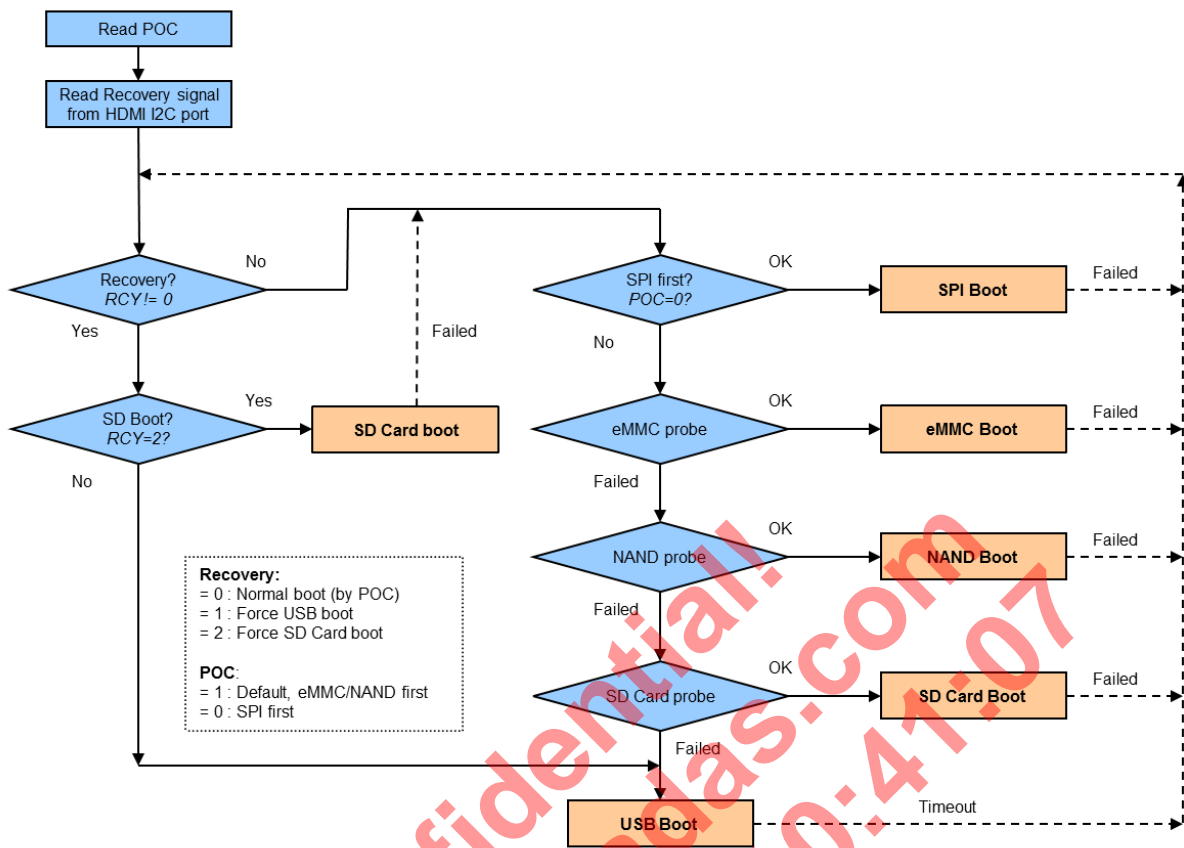

8.3.1 Overview

The part describes the power-on mode configuration of A311D, which include two portions: Cortex-M3 for security control and A53 for others.

8.3.2 Power-on Flow Chart

Figure 8-4 illustrates A311D's power on sequence.

Figure 8-4 Power-on Flow Chart

8.4 CPU

The Cortex™-A53 MP subsystem of the chip is a high-performance, low-power, ARM macrocell with an L1 cache subsystem and an L2 cache subsystem that provide full virtual memory capabilities. The Cortex-A53 processor implements the ARMv8 architecture and runs 32-bit ARM instructions and 64 bit ARMv8 instructions. The developers can follow the ARM official reference documents for programming details.

The Cortex-A53 processor features are:

- in-order pipeline with dynamic branch prediction
- ARM, Thumb, and ThumbEE instruction set support
- TrustZone security extensions
- Harvard level 1 memory system with a Memory Management Unit (MMU)
- 128-bit AXI master interface
- ARM CoreSight debug architecture
- trace support through an Embedded Trace Macrocell (ETMv4) interface
- Intelligent Energy Manager (IEM) support with
 - asynchronous AXI wrappers
 - two voltage domains
- Media Processing Engine (MPE) with NEON technology
- Supports FPU
- Supports Hardware Virtualization

The quad core Cortex™-A73 processor is paired with A53 processor in a big.Little configuration, with each core has L1 instruction and data caches, together with a single shared L2 unified cache with A53. The developers can follow the ARM official reference documents for programming details.

The Cortex-A73 processor features are:

- Armv8-A Architecture
- 1-4x Symmetrical Multiprocessing (SMP) within a single processor cluster, and multiple coherent SMP processor clusters through AMBA 4 ACE technology
- AArch32 for full backward compatibility with Armv7
- AArch64 for 64-bit support and new architectural features
- TrustZone security technology
- NEON advanced SIMD
- DSP & SIMD extensions
- VFPv4 floating point
- Supports Hardware virtualization
- trace support through CoreSight SoC-400 interface

8.5 GPU

The G52 MP4 (6EE) GPU is a hardware accelerator for 2D and 3D graphics system which compatible with the following graphics standards: OpenGL ES 3.2 Vulkan 1.1 and OpenCL 2.0. The developers can follow the ARM and Khronos official reference documents for programming details.

8.6 NPU

8.6.1 Overview

NPU is the process unit which is dedicated to neural network. It is designed to accelerate the neural network arithmetic in field of AI(artificial intelligence) such as machine vision and natural language processing.

Figure below shows the hardware structure of Neural Network Accelerator.

Figure 8-5 Hardware Architecture Diagram of Neural Network Accelerator

NPU supports the following features.

- Host interface
 - 32bit AHB interface used for configuration only support single mode access
 - 128bit AXI interface used to fetch data memory
- Neural Network
 - Support integer 8, integer 16 convolution operation
 - 768MAC (multiply-add units) per cycle (int 8)
 - 192MAC per cycle (int 16)
 - Support Liner, MIMO, Fully Connected, Fully Convolution
 - Unlimited network size (bound by system resource)
 - Inference Engine: Tensorflow, Tensorflow lite, Darknet, Onnxc Caffe, Caffe2, Pytorch, Keras backend, OpenCL, OpenVX
 - Support network sparse coefficient decompression
 - Support Max, average pooling
 - Max pooling support 2x2, 3x3, stride <= min (input width, input height)
 - Local average pooling size <= 11x11
 - Support unpooling
 - Support batch normalize, l2 normalize, local response normalize, Instance normalize
 - Support region proposal
 - Support permute, reshape, concat, depth to space, space to depth, flatten, reorg, squeeze and

split

- Support prior_box layer
- Support non-max Suppression
- Support ROI pooling
- Convolution size $N \times N$, $N \leq 11 \times \text{stride}$, $\text{stride} \leq \min(\text{input width}, \text{input height})$
- Support dilate convolution, $N \leq 11 \times \text{stride}$, $\text{stride} \leq \min(\text{input width}, \text{input height})$, $\text{dilation} < 1024$
- Support de-convolution, $N \leq 11 \times \text{stride}$, $\text{stride} \leq \min(\text{input width}, \text{input height})$
- Support Element_wise add, div, floor, max, mul, scale, sub
- Support ReLU, Leaky ReLU, Softmax, PreLU, Sigmoid, Tanh
- Support LSTM, RNN
- Support channel shuffle
- Support dequantize, dropout
- Include embedded lookup table
- Support hashtable lookup
- Support lsh projection
- Support svdf
- Support reserve

8.6.2 Register Description

AQHiClockControl 0x0000

| Bit(s) | R/W | Name | Description |
|--------|-----|--------------------------------|---|
| 0 | R/W | CLK3D_DIS | Disable 3D clock. Software core clock disable signal for 3D modules(clk_3d) clock. When set to 1, this clock is frozen. |
| 1 | R/W | CLK2D_DIS | Disable 2D clock. Software clock disable signal. For this core both bits CLK3D_DIS and CLK2D_DIS should be controlled by software. The AXI interface clock is the only block not stalled at that point. |
| 8:2 | R/W | FSCALE_VAL | Core clock frequency scale value. |
| 9 | R/W | FSCALE_CMD_LOAD | Core clock frequency scale value enable. When writing a 1 to this bit, it updates the frequency scale factor with the value FSCALE_VAL[6:0]. The bit must be set back to 0 after that. If this bit is set and FSCALE_VAL=0 (an invalid combination), the HREADYOUT output signal will get stuck to 0. |
| 10 | R/W | DISABLE_RAM_CLOCK_GATING | Disables clock gating for rams. |
| 13 | R/W | DISABLE_RAM_POWER_OPTIMIZATION | Disables ram power optimization. |
| 16 | R | IDLE3_D | 3D pipe is idle. |
| 19 | R/W | ISOLATE_GPU | Isolate GPU bit. Used for power on/off, isolation only for multi-core GPUs. |
| 23:20 | R/W | MULTI_PIPE_REG_SELECT | Determines which HI/MC to use while reading registers. |

AQHIdle 0x0001

| Bit(s) | R/W | Name | Description |
|--------|-----|---------|---------------------------|
| 0 | R | IDLE_FE | FE is idle. |
| 1 | R | IDLE_SH | SH is idle. |
| 31 | R | AXI_LP | AXI is in low power mode. |

AQAxistatus 0x0003

| Bit(s) | R/W | Name | Description |
|--------|-----|------------|--------------------|
| 9 | R | DET_RD_ERR | Detect read error |
| 8 | R | DET_WR_ERR | Detect write error |
| 7:4 | R | RD_ERR_ID | Read Error ID |
| 3:0 | R | WR_ERR_ID | Write Error ID |

AQIntrAcknowledge 0x0004

| Bit(s) | R/W | Name | Description |
|--------|-----|----------|---|
| 31:0 | R | INTR_VEC | For each interrupt event, 0=Clear, 1=InterruptActive Bit 31 is AXI_BUS_ERROR, 0 = No Error. |

AQIntrEnbl 0x0005

| Bit(s) | R/W | Name | Description |
|--------|-----|---------------|---|
| 31:0 | R/W | INTR_ENBL_VEC | 0: Disable interrupt; 1: Enable interrupt |

GCChipRev 0x0009

| Bit(s) | R/W | Name | Description |
|--------|-----|------|-------------|
| 31:0 | R | REV | Revision |

GCChipDate 0x000A

| Bit(s) | R/W | Name | Description |
|--------|-----|------|-------------|
| 31:0 | R | DATE | Date. |

gcTotalCycles 0x001E

| Bit(s) | R/W | Name | Description |
|--------|-----|--------|-------------|
| 31:0 | R/W | CYCLES | |

gcregHIChipPatchRev 0x0026

| Bit(s) | R/W | Name | Description |
|--------|-----|-----------|-------------|
| 7:0 | R | PATCH_REV | |

gcProductId 0x002A

| Bit(s) | R/W | Name | Description |
|--------|-----|-------------|---|
| 3:0 | R | GRADE_LEVEL | 0: None-no extra letter on the product name 1:N-Nano 2:L-Lite 3:UL-UltraLite |
| 23:4 | R | NUM | Product Number |
| 27:24 | R | TYPE | VIP (OpenVX/VIP only core) |
| 31:28 | R | | When 27:24=5 (VIP core type), these bits provide the Neural Network core count for the IP: 0 = 0 NN(baseline), 1 = 1 NN(S variant), 2 = 2 NN(D variant), 4 = 4 NN (Q variant), 8 = 8 NN (O variant) |

gcModulePowerControls 0x0040

| Bit(s) | R/W | Name | Description |
|--------|-----|------------------------------------|--|
| 0 | R/W | ENABLE_MODULE_CLOCK_GATING | Enables module level clock gating. |
| 1 | R/W | DISABLE_STALL_MODULE_CLOCK_GATING | Disables module level clock gating for stall condition. |
| 2 | R/W | DISABLE_STARVE_MODULE_CLOCK_GATING | Disables module level clock gating for starve/idle condition. |
| 7:4 | R/W | TURN_ON_COUNTER | Number of clock cycles to wait after turning on the clock. |
| 31:16 | R/W | TURN_OFF_COUNTER | Counter value for clock gating the module if the module is idle for this amount of clock cycles. |

gcregMMUAHBControl 0x00E2

| Bit(s) | R/W | Name | Description |
|--------|-----|------|--|
| 0 | W | MMU | Enable the MMU. For security reasons, once the MMU is enabled it cannot be disabled anymore. writeOnce |

gcregMMUAHBTableArrayBaseAddressLow 0x00E3

| Bit(s) | R/W | Name | Description |
|--------|-----|---------|---|
| 31:0 | R/W | ADDRESS | 32 bit Address for MMU TableArrayBaseLow 32bit. |

gcregMMUAHBTableArrayBaseAddressHigh 0x00E4

| Bit(s) | R/W | Name | Description |
|--------|-----|----------------------|---|
| 7:0 | R/W | MASTER_TLB | Upper 8-bits of the master TLB address to form a true 40-bit address. |
| 8 | R/W | MASTER_TLB_SECURE | Bit that defines whether the master TLB address is secure or not |
| 9 | R/W | MASTER_TLB_SHAREABLE | Bit that defines whether the master TLB address is shareable or not. |

gcregMMUAHBTableArraySize 0x00E5

| Bit(s) | R/W | Name | Description |
|--------|-----|------|----------------------------|
| 15:0 | R/W | SIZE | 16 bit MMU TableArraySize. |

gcregCmdBufferAHBCtrl 0x00E9

| Bit(s) | R/W | Name | Description |
|--------|-----|----------|---|
| 15:0 | W | PREFETCH | Number of 64-bit words to fetch from the command buffer. |
| 16 | W | ENABLE | Enable the command parser. 0 => DISABLE 1 => ENABLE |

gcregHiAHBControl 0x00EA

| Bit(s) | R/W | Name | Description |
|--------|-----|------------|--|
| 0 | R/W | SOFT_RESET | Soft resets the IP. 1 => ENABLE 0 => DISABLE |
| 1 | R/W | DEBUG_MODE | Enable debug mode if disabled debug registers return 0xFFFF FFFF. 1 => ENABLE 0 => DISABLE |

gcregAxiAHBConfig 0x00EB

| Bit(s) | R/W | Name | Description |
|--------|-----|-------------------------|--|
| 3:0 | R/W | AWID | |
| 7:4 | R/W | ARID | |
| 11:8 | R/W | AWCACHE | Set AWCACHE[3:0] value |
| 15:12 | R/W | ARCACHE | Set ARCACHE[3:0] value |
| 17:16 | R/W | AXDOMAIN_SHARED | Configure AxDOMAIN value for shareable request |
| 19:18 | R/W | AXDOMAIN_NON_SHARED | Configure AxDOMAIN value for non-shareable request |
| 23:20 | R/W | AXCACHE_OVERRIDE_SHARED | Configure AxCACHE value for shareable request |

AQMemoryDebug 0x0105

| Bit(s) | R/W | Name | Description |
|--------|-----|-----------------------|---|
| 7:0 | R/W | MAX_OUTSTANDING_READS | Limits the total number of outstanding read requests. |

AQRegisterTimingControl 0x010B

| Bit(s) | R/W | Name | Description |
|--------|-----|-------------|--|
| 7:0 | R/W | FOR_RF1P | For 1 port RAM |
| 15:8 | R/W | FOR_RF2P | For 2 port RAM |
| 17:16 | R/W | FAST_RTC | RTC for fast RAM |
| 19:18 | R/W | FAST_WTC | WTC for fast RAM |
| 20 | R/W | POWER_DOWN | Power down memory |
| 21 | R/W | DEEP_SLEEP | Deep sleep. Bit to allow SOC to manage sleep for embedded memories. |
| 22 | R/W | LIGHT_SLEEP | Light sleep. Bit to allow SOC to manage sleep for embedded memories. |

AQCmdBufferAddr 0x0195

| Bit(s) | R/W | Name | Description |
|--------|-----|---------|--|
| 30:0 | W | ADDRESS | Base address for the command buffer. The address must be 64-bit aligned and it is always physical. You can write all bits (the virtual bit is legacy). This register cannot be read. To check the value of the current fetch address use AQFEDebugCurCmdAdr. This WRITE ONLY register it has no set reset value. |
| 31 | W | TYPE | 0 => SYSTEM 1 => VIRTUAL_SYSTEM |

AQFEDebugCurCmdAdr 0x0199

| Bit(s) | R/W | Name | Description |
|--------|-----|-------------|---|
| 31:3 | R | CUR_CMD_ADR | This is the command decoder address. It has no reset value. READ ONLY |

8.7 Clock

8.7.1 Overview

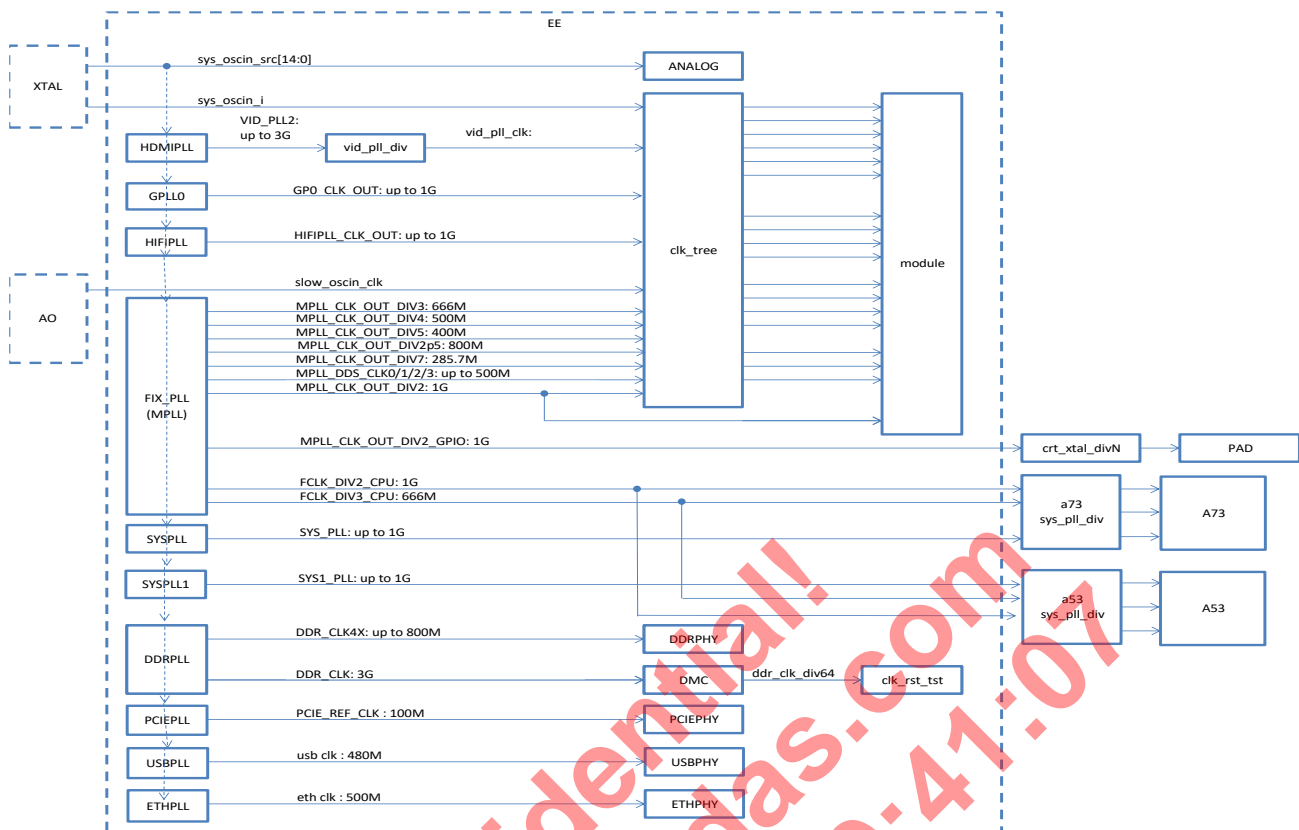

The clock and reset unit is an APB slave module that is designed for generating all of the internal and system clocks, resets of chip. A311D uses an external 24MHz crystal; there are 10 PLLs: MPLL(FIXPLL), SYS_PLL, SYS1_PLL, HDMI_PLL, GP0_PLL, DDR_PLL, HIFI_PLL, PCIE_PLL, ETHPHY_PLL and USBPHY_PLL, as shown in the following table.

Table 8-9 A311D PLLs

| Type | Output Clock | Integer/Fractional | MAX FREQ | Spread Spectrum |
|---------------|------------------------|--------------------|---------------|-----------------|
| SYS_PLL | SYS_CLK_OUT | Fractional | 6G | yes |
| SYS1_PLL | SYS1_CLK_OUT | Fractional | 6G | yes |
| GP0_PLL | GP0_CLK_OUT | Fractional | 6G | yes |
| HIFI_PLL | HIFI_CLK_OUT | Fractional | 6G | yes |
| PCIE_PLL | PCIE_REF_CLK_N/P | | 100M(fixed) | yes |
| ETHPHY_PLL | ETH_CLK | | 500M(fixed) | No |
| USBPHY_PLL | USB_CLK | | 480M(fixed) | No |
| MPLL | FCLK_DIV2_CPU | | 1G(fixed) | No |
| | FCLK_DIV3_CPU | | 666M(fixed) | No |
| | MPLL_CLK_OUT_DIV2_GPIO | | 1G(fixed) | No |
| | MPLL_CLK_OUT_DIV2 | | 1G(fixed) | No |
| | MPLL_CLK_OUT_DIV2p5 | | 800M(fixed) | No |
| | MPLL_CLK_OUT_DIV3 | | 666M(fixed) | No |
| | MPLL_CLK_OUT_DIV4 | | 500M(fixed) | No |
| | MPLL_CLK_OUT_DIV5 | | 400M(fixed) | No |
| | MPLL_CLK_OUT_DIV7 | | 285.7M(fixed) | No |
| | MPLL_DDS_CLK0 | Fractional | 500M | No |
| | MPLL_DDS_CLK1 | Fractional | 500M | No |
| | MPLL_DDS_CLK2 | Fractional | 500M | yes |
| | MPLL_DDS_CLK3 | Fractional | 500M | yes |
| | HDMI_PLL | HDMI_CLK_OUT | Fractional | 6G |
| HDMI_CLK_OUT2 | | Fractional | 6G | yes |
| DDR_PLL | DDR_CLK4X_OUT | Fractional | 4.8G | yes |
| | DDR_CLK_OUT | Fractional | 4.8G | No |

Clock Trees Figure 8-6 shows the clock connections of A311D. In this part, we will discuss A53/A73 clock tree, AO clock tree, HDMI clock tree and EE clock tree in detail.

Figure 8-6 Clock Connections

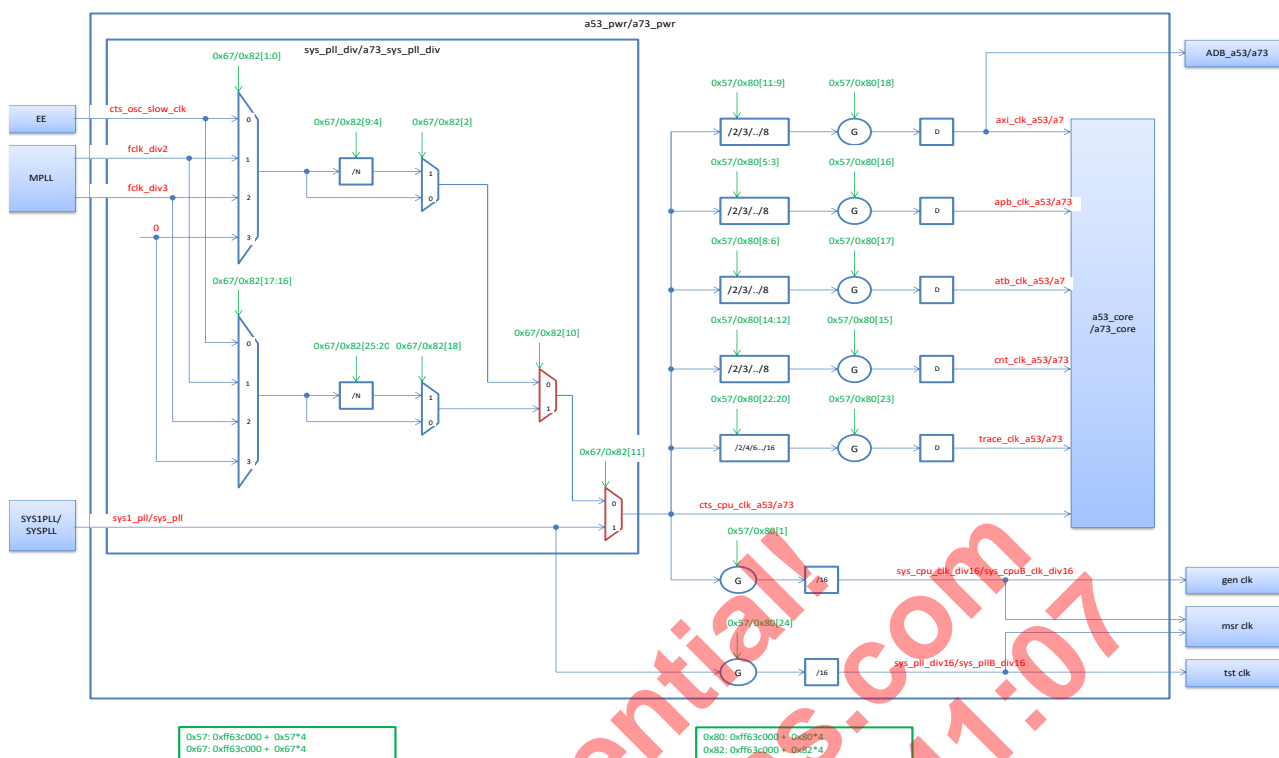

8.7.1.1 A53/A73 Clock Tree

A53/A73 has 4 clock source, as shown in the following figure, among which,

4. **cts_osc_slow_clk** is for low power and debug,
5. **fclk_div2** and **fclk_div3** are for frequencies lower than 1G.
6. **sys_pll** is for frequencies higher than 1G.

Figure 8-7 Mutil Phase PLLS of A53/A73

To avoid glitch when change frequencies, there are 2 specially designed dynamic muxes, labeled by red in the above figure. When frequencies changes, the dynamic muxes will first stop the first frequency, then start the second so there will be no mixing of 2 different frequencies thus generate no frequency glitch.

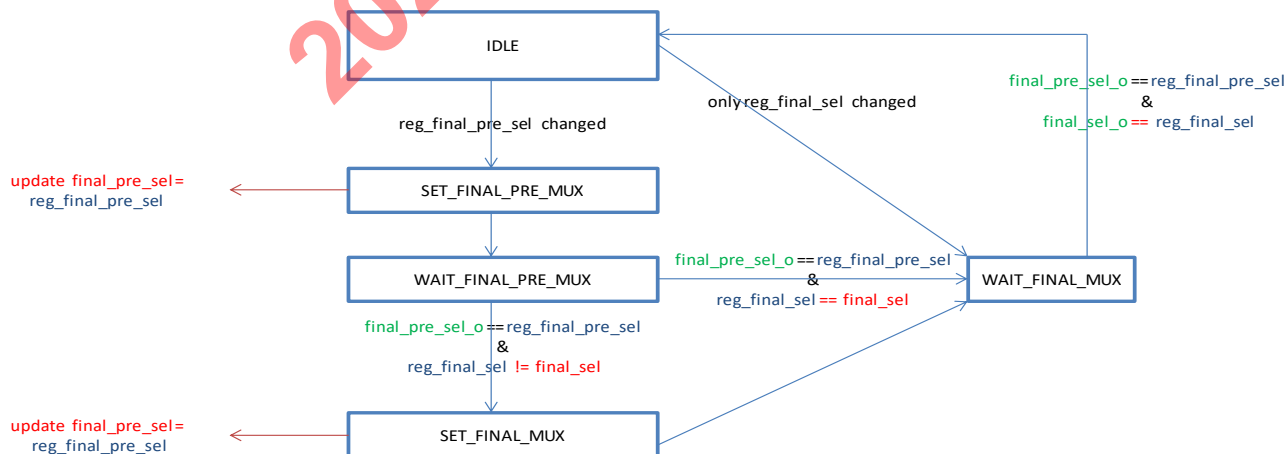

It is possible to do the following switch without glitch:

- 7. Between any 2 frequencies lower than 1GHz;
- 8. From a frequency lower than 1GHz to a frequency higher than 1GHz;

If the user want to switch between 2 frequencies both higher than 1GHz, it is strongly recommended to change to frequencies lower than 1GHz first.

The diagram of specially designed dynamic mux is shown in the following diagram:

Figure 8-8 Diagram of Dynamic Mux

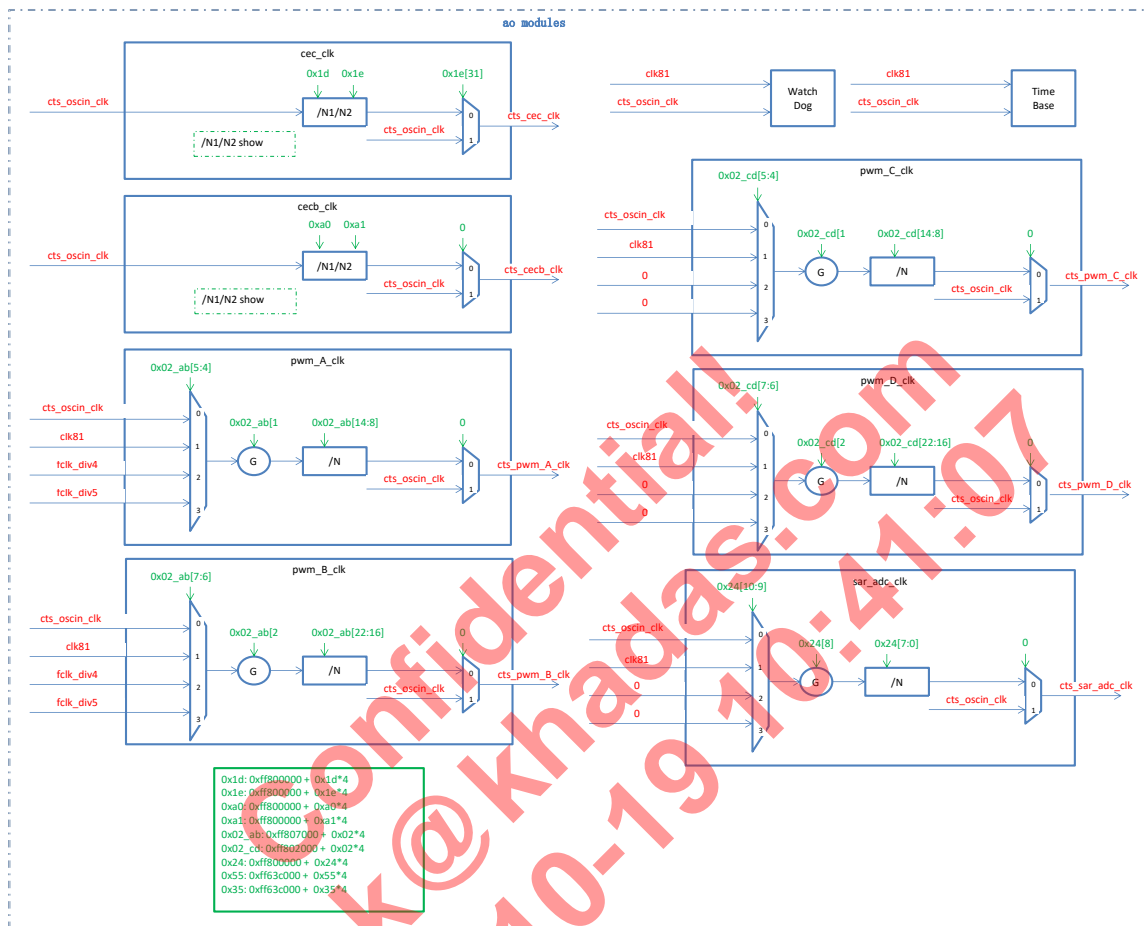

Note:

When use these 2 dynamic muxes, both control bits of these muxes have to be configured at the same time, otherwise they will not function correctly.

8.7.1.2 AO Clock Tree

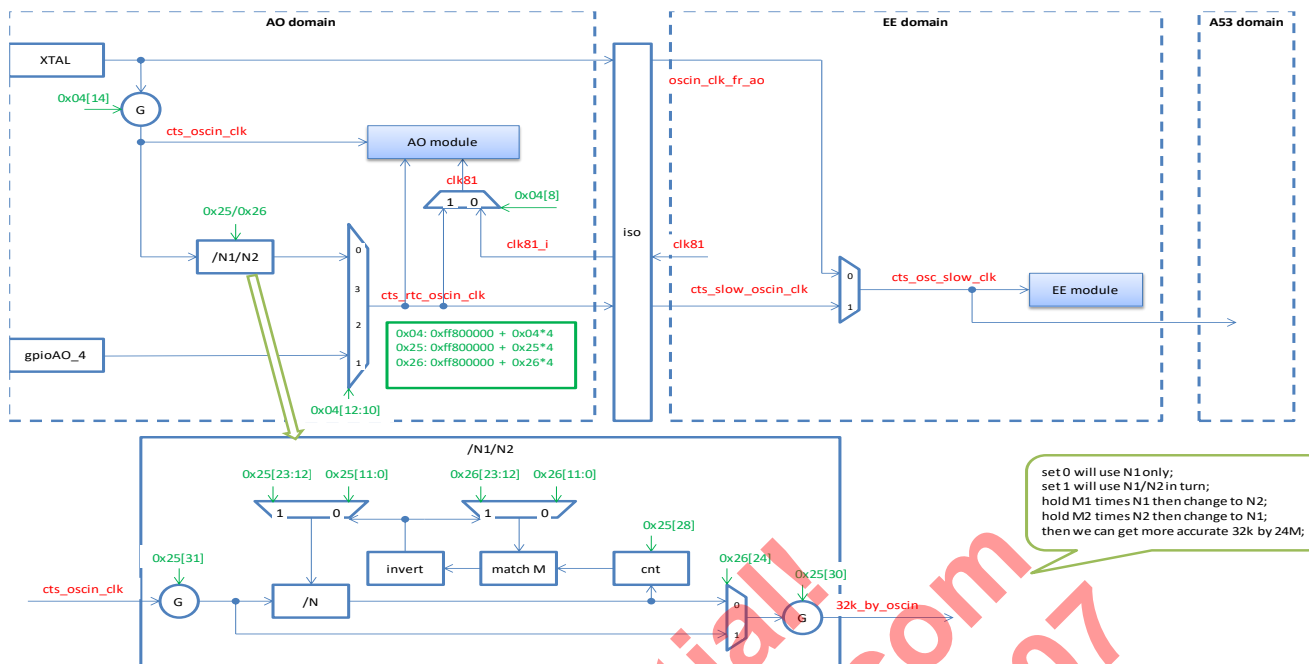

The following figure shows the clock source of AO modules:

Figure 8-9 AO Clock Sources

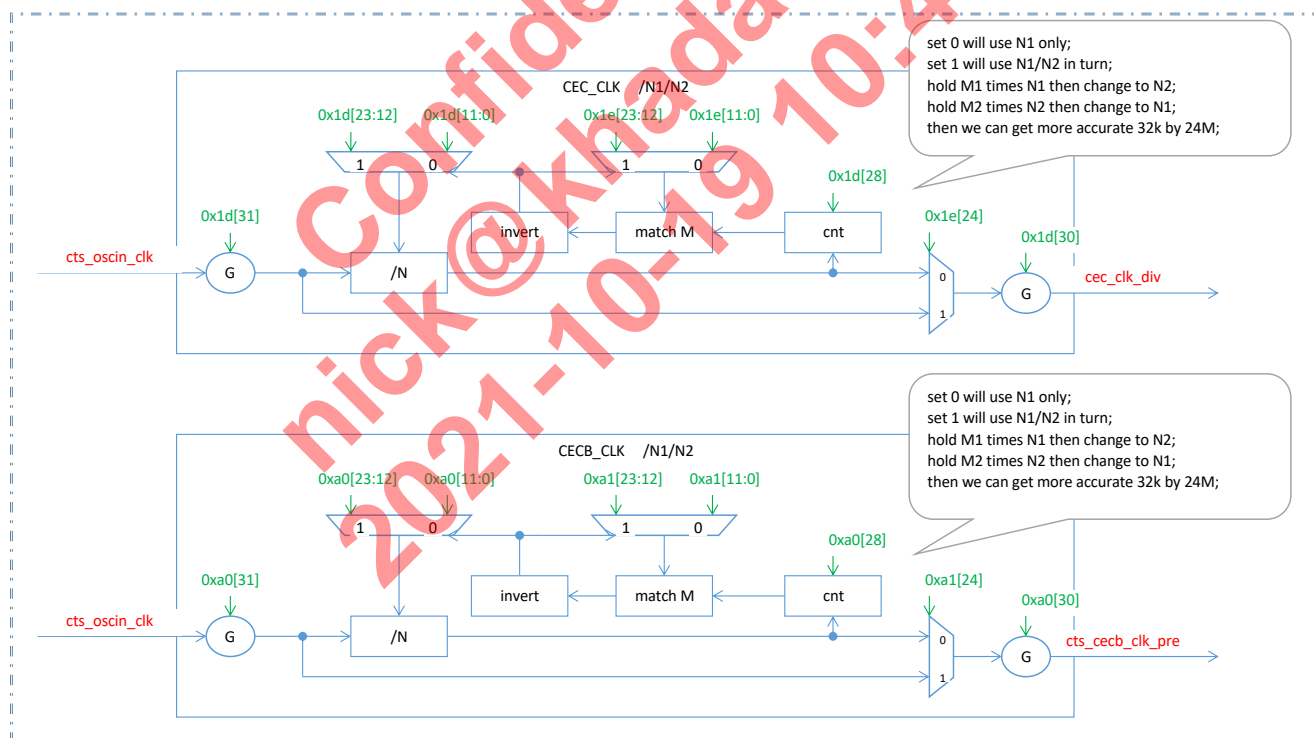

For low power mode, 32KHz clock is needed, and it is generated in AO domain as shown in the following diagram:

Figure 8-10 How to generate 32KHz Clock

To generate exact 32768Hz frequency, please check below diagram.

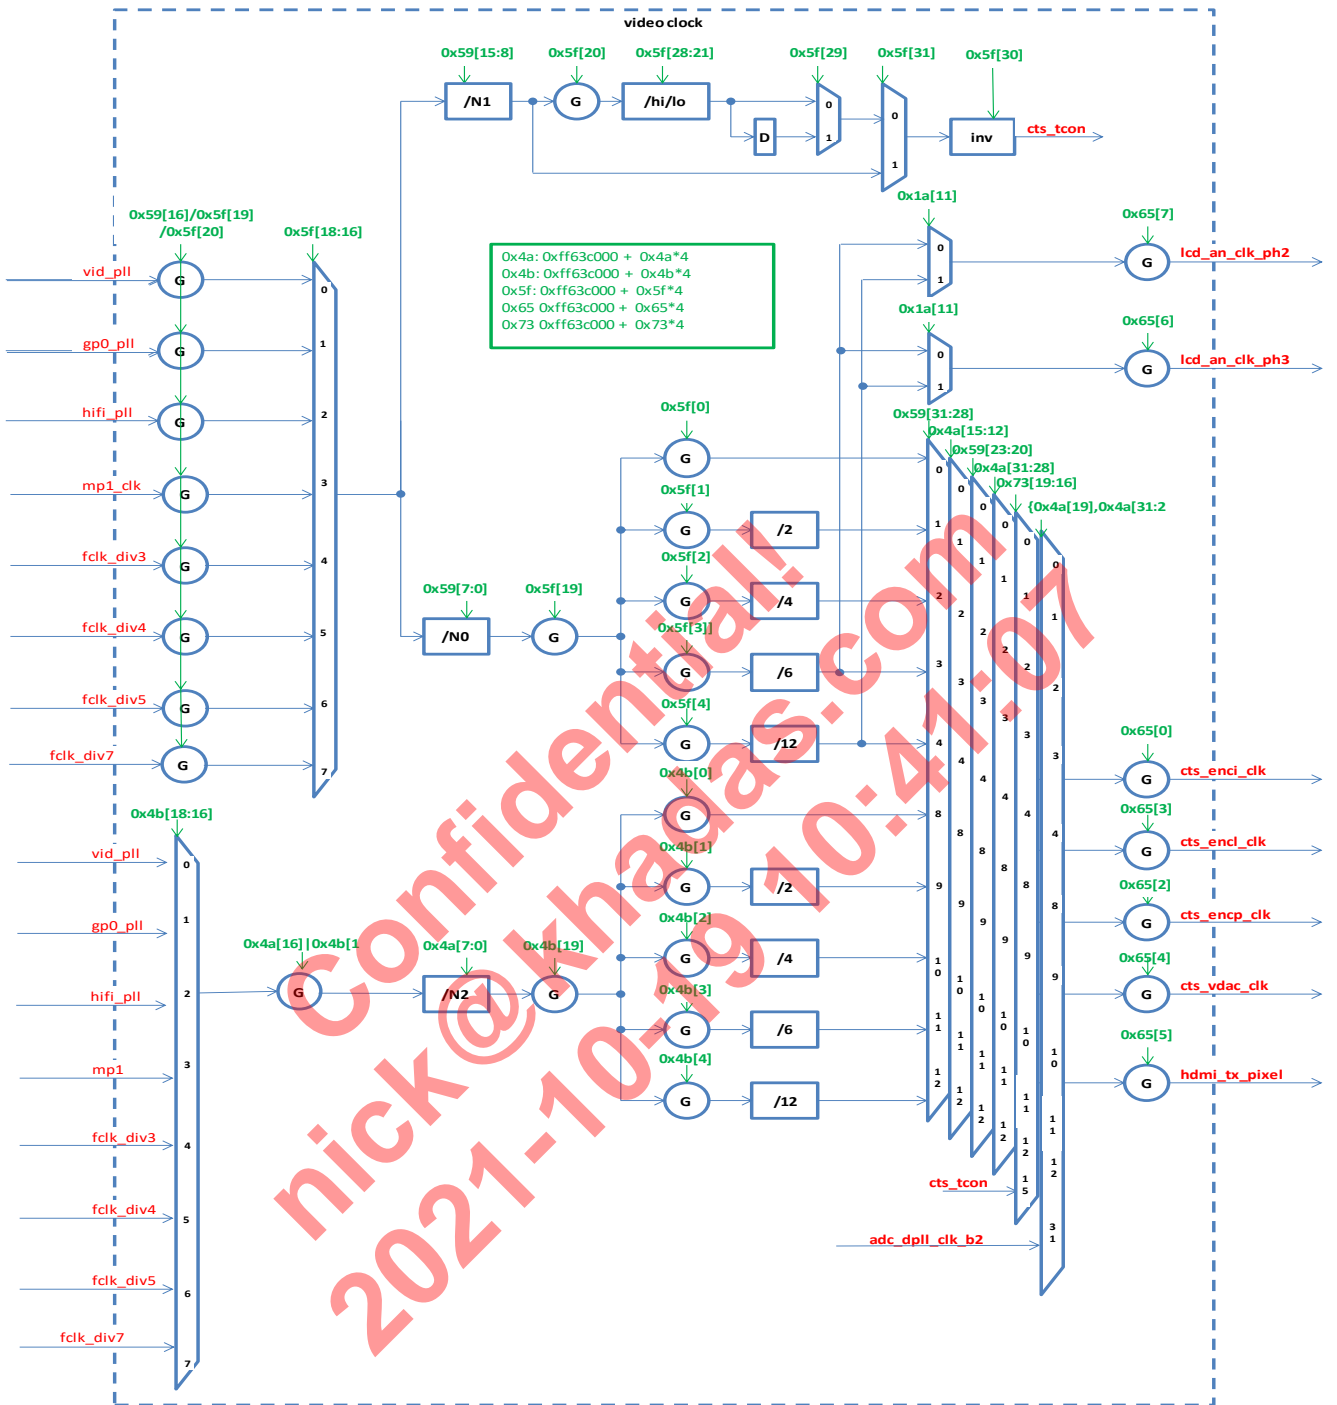

Figure 8-11 How to generate 32786Hz Clock

8.7.1.3 HDMI Clock Tree

The HDMI_PLL goes through vid_pll_div to generate new clock. The HDMI clock tree is shown in the following figure:

Figure 8-13 Video Clock Tree

8.7.2 Frequency Calculation and Setting

The PLL frequency tuning step is reference clock/2¹⁷.

The general frequency tuning formula is shown as below.

$$\text{Target Frequency} = 24\text{MHz} \cdot \frac{DPLL_M + \frac{DIV_FRAC}{2^{17}}}{DPLL_N} \cdot \frac{1}{OD}$$

The PLL fractional value weight table(if not other stated) is shown below:

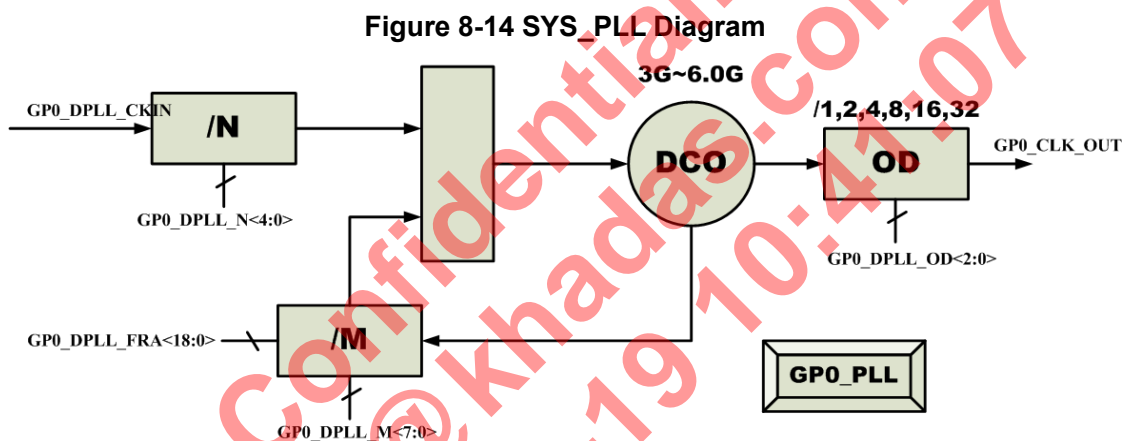

Table 8-11 A311D Fractional Value Weight Table

| | Bit18 | Bit17 | Bit16 | Bit15 | .. | .. | .. | .. | .. | .. | .. | Bit0 |
|--------|-------|-------|-------|------------------|----|----|----|----|----|----|----|-------------------|
| Weight | +/- | 1 | 1/2 | 1/2 ² | .. | .. | .. | .. | .. | .. | .. | 1/2 ¹⁷ |

For example, to get a fractional value 0.875, you can set CNTL1[18:0] = 19'h1c000

8.7.2.1 SYS_PLL/SYS1_PLL

SYS_PLL diagram is shown as below:

DCO frequency is calculated with the following equation:

$$f_{DCO} = f_{REF} \cdot (M + frac) / N$$

OD control table is as following:

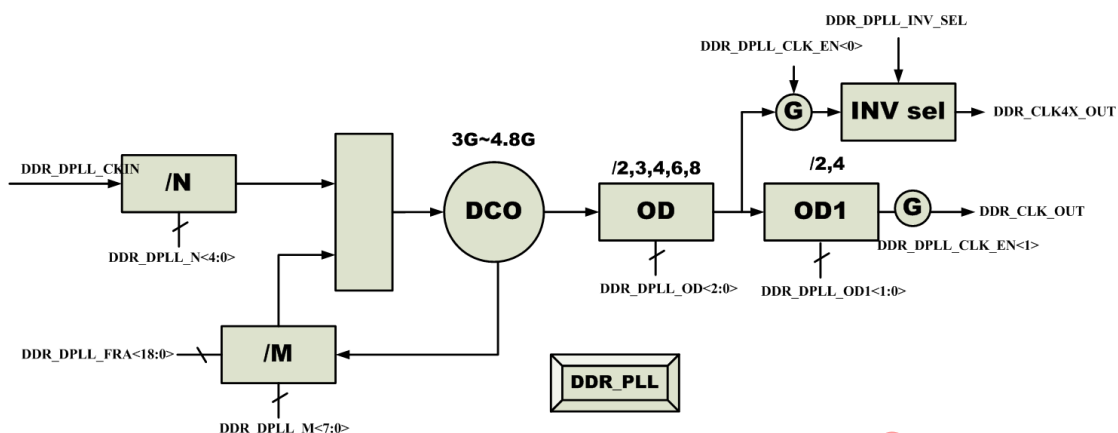

Table 8-12 A311D SYS_PLL OD Control Table

| Block | Register | Function |
|-------|------------------|----------|
| OD | SYS_DPLL_OD<2:0> | 000: /1 |
| | | 001: /2 |
| | | 010: /4 |
| | | 011: /8 |
| | | 100: /16 |
| | | 101: /32 |

8.7.2.2 DDR_PLL

DDR_PLL diagram is shown as below:

Figure 8-15 DDR_PLL Diagram

DCO frequency is calculated with the following equation:

$$f_{DCO} = f_{REF} \cdot (M + frac) / N$$

OD control table is as following:

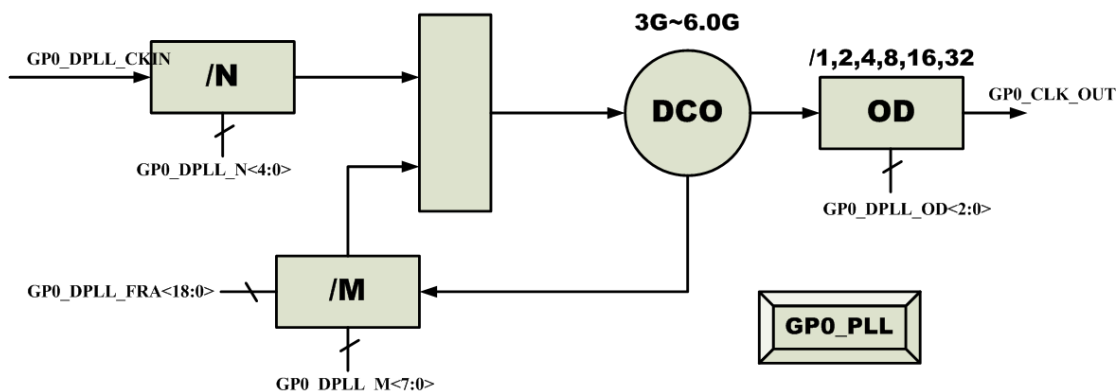

Table 8-13 A311D DDR_PLL Control Table

| Block | Register | Function |
|-------|-------------------|----------|
| OD | DDR_DPLL_OD<2:0> | 000:/2 |
| | | 001:/3 |
| | | 010:/4 |
| | | 011:/6 |
| | | 100:/8 |
| OD1 | DDR_DPLL_OD1<1:0> | *0:/2 |
| | | *1:/4 |

8.7.2.3 GP0 PLL

GP0 PLL diagram is shown as below:

Figure 8-16 GP0 PLL Diagram

DCO frequency is calculated with the following equation:

$$f_{DCO} = f_{REF} \cdot (M + frac) / N$$

OD control table is as following:

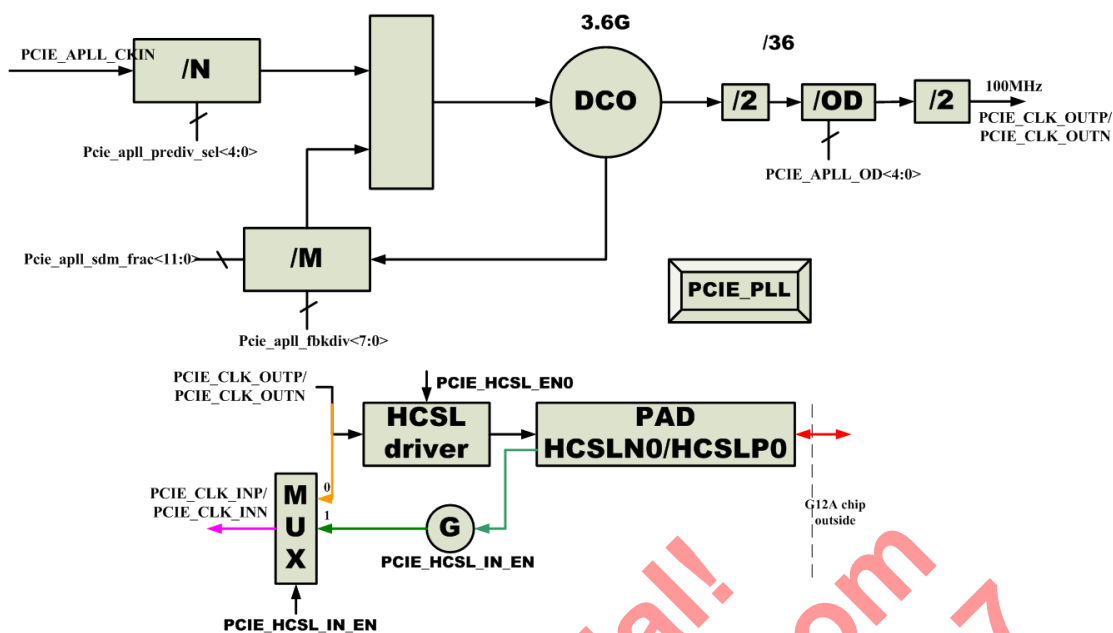

Table 8-14 A311D GP0 PLL OD Control Table

| Block | Register | Function |
|-------|------------------|----------|
| OD | GP0_DPLL_OD<2:0> | 000:/1 |
| | | 001:/2 |
| | | 010:/4 |
| | | 011:/8 |
| | | 100:/16 |
| | | 101:/32 |

8.7.2.4 PCIE PLL

PCIE PLL diagram is shown as below.

Figure 8-17 PCIe PLL Diagram

DCO frequency is calculated with the following equation:

$$f_{DCO} = f_{REF} \cdot (M + frac) / N$$

OD control table is as following:

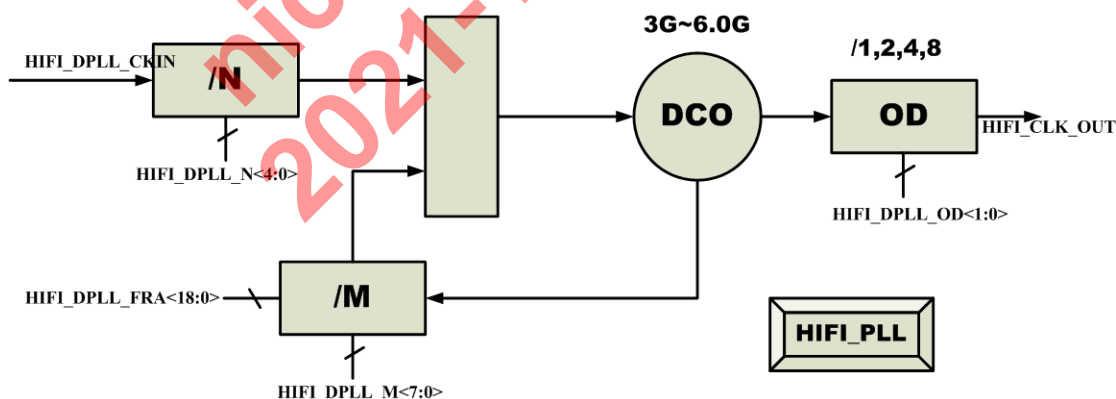

Table 8-15 A311D PCIe PLL OD Control Table

| Block | Register | Function |
|-------|-------------------|---------------------|
| OD | PCIE_APLL_OD<4:0> | OD<4:0>=5'h09 : 1/9 |

8.7.2.5 HIFI PLL

HIFI PLL diagram is shown as below:

Figure 8-18 HIFI PLL Diagram

DCO frequency is calculated with the following equation:

$$f_{DCO} = f_{REF} \cdot (M + frac) / N$$

OD control table is as following:

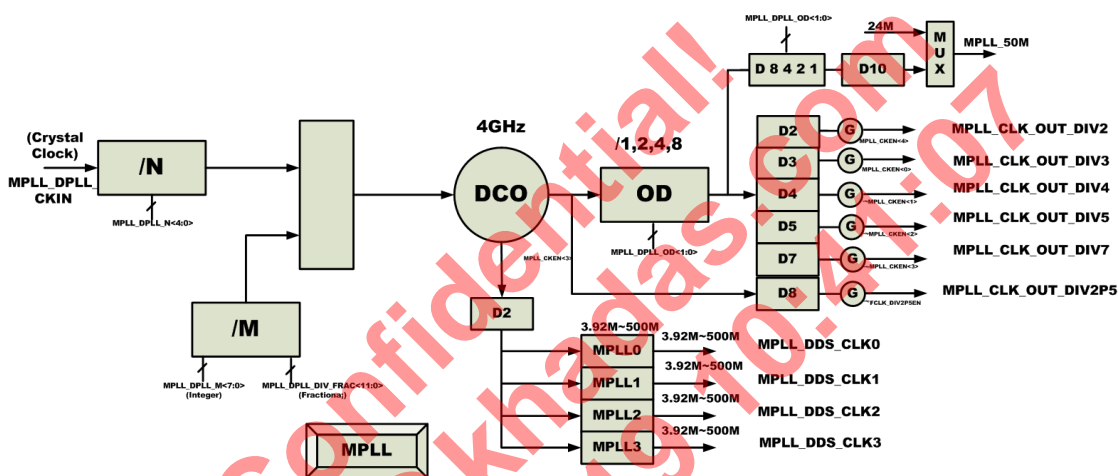

Table 8-16 A311D HIFI PLL OD Control Table

| Block | Register | Function |
|-------|-------------------|----------|
| OD | HIFI_DPLL_OD<1:0> | 00: /1 |
| | | 01:/2 |
| | | 10:/4 |
| | | 10:/8 |

8.7.2.6 MPLL(Fixed PLL)

MPLL diagram is shown as below:

Figure 8-19 MPLL Diagram

The output frequency calculation equations are shown as following(if N>3. MPLL_DDS_CLK2 and MPLL_DDS_CLK3 has SSG function):

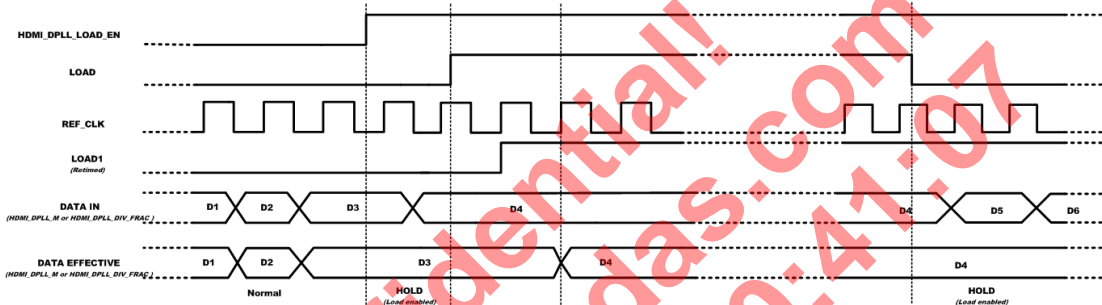

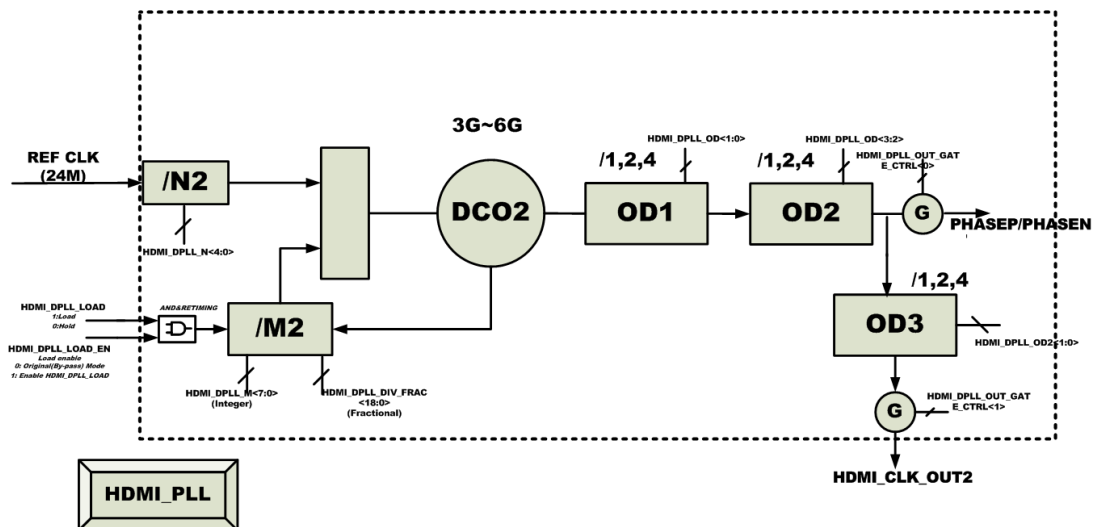

$$f_{out_2G} = f_{ref} * M * OD_FB / N$$

$$MPLL_CLK_OUT2 = f(N2_integer, SDM_IN) = \left(\frac{2Ghz}{(N2_integer + \frac{SDM_IN}{16384})} \right)$$

8.7.2.7 HDMI PLL

HDMI PLL diagram is shown as below.

Figure 8-20 HDMI PLL Diagram

OD control table is as following:

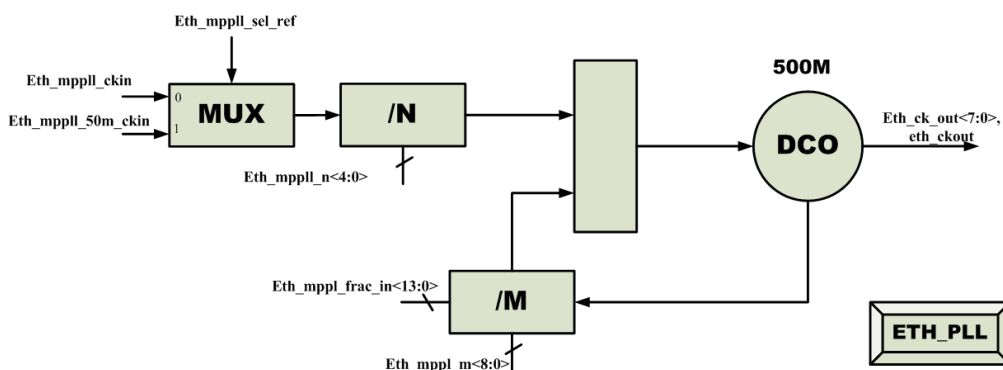

Table 8-17 A311D HDMI PLL OD Control Table

| Block | Register | Function |
|-------|--------------------|----------|
| OD1 | HDMI_DPLL_OD<1:0> | 00: /1 |
| | | 01: /2 |
| | | 10: /4 |
| OD2 | HDMI_DPLL_OD<3:2> | 00: /1 |
| | | 01: /2 |
| | | 10: /4 |
| OD3 | HDMI_DPLL_OD2<1:0> | 00: /1 |
| | | 01: /2 |
| | | 10: /4 |

8.7.2.8 ETHPHY PLL

ETH PLL diagram is shown as below:

Figure 8-21 ETH PLL Diagram

DCO frequency is 500M.

The Eth_PLL fractional value weight table is shown below:

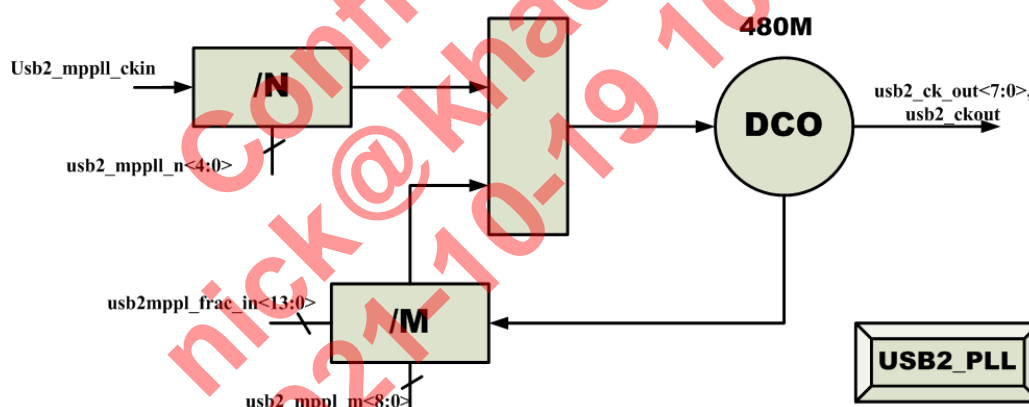

Table 8-18 ETHPHY_PLL Fractional Value Weight Table

| | Bit13 | Bit12 | Bit11 | Bit10 | .. | .. | .. | .. | .. | .. | .. | Bit0 |
|--------|-------|------------------|------------------|------------------|----|----|----|----|----|----|----|-------------------|
| Weight | 1/2 | 1/2 ² | 1/2 ³ | 1/2 ⁴ | .. | .. | .. | .. | .. | .. | .. | 1/2 ¹⁴ |

8.7.2.9 USBPHY PLL

USB PLL diagram is shown as below:

Figure 8-22 USB PLL Diagram

DCO frequency is 500M.

The USB_PLL fractional value weight table is shown below:

Table 8-19 USBPHY_PLL Fractional Value Weight Table

| | Bit13 | Bit12 | Bit11 | Bit10 | .. | .. | .. | .. | .. | .. | .. | Bit0 |
|--------|-------|------------------|------------------|------------------|----|----|----|----|----|----|----|-------------------|
| Weight | 1/2 | 1/2 ² | 1/2 ³ | 1/2 ⁴ | .. | .. | .. | .. | .. | .. | .. | 1/2 ¹⁴ |

8.7.3 Clock Gating

Modules and sub-modules within the chip can be disabled by shutting off the clock. The control for these clocks comes from six CBUS registers that collectively make up a 64-bit register that controls the MPEG_DOMAIN and a 32-bit register that controls the OTHER_DOMAIN. The table below indicates the Bits associated with either the MPEG_DOMAIN and OTHER_DOMAIN gated clock enables. The table is organized by function rather than by bit order because it makes it easier to determine how to turn on/off

a particular function within the chip. If a bit is set high, the clock is enabled. If a bit is set low, the clock is turned off and the module is disabled.

Table 8-20 AO Domain Clock Gating CBUS 0x1055 control Bits

| Address | Bit(s) | Module Description |
|------------|--------|--------------------|
| 0xff80004C | 31:10 | Unused |

8.7.4 Clock Measure

The chip contains a module that can measure the frequency of internal clock. The frequency measurement is a simple counter measurement in which the counter (driven by MCLK) is enabled for a programmable amount of time. The sources are listed in the following table.

Table 8-22 Clock Measure Source

| No | Source |
|-----|--------------------------|
| 127 | 1'b0 |
| 126 | mipi_csi_phy1_clk_out |
| 125 | mipi_csi_phy0_clk_out |

HHI_MPEG_CLK_CNTL 0x5d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R/W | 0 | NEW_DIV_EN: If this bit is set to 1, then bits[30:16] make up the clk81 divider. If this bit is 0, then bits[6:0] dictate the divider value. This is a new feature that allows clk81 to be divided down to a very slow frequency. |
| 30~16 | R/W | 0 | NEW_DIV: New divider value if bit[31] = 1 |
| 15 | R/W | 0 | Production clock enable |
| 14-12 | R.W | 6 | MPEG_CLK_SEL (See clock document) |
| 11-10 | R/W | 0 | unused |
| 9 | R.W | 0 | RTC Oscillator Enable: Set this bit to 1 to connect the RTC 32khz oscillator output as the XTAL input for the divider above |
| 8 | R/W | 0 | Divider Mux: 0 = the ARC clock and the MPEG system clock are connected to the 27Mhz crystal. 1 = the ARC clock and the MPEG system clock are connected to the MPEG PLL divider |
| 7 | R/W | 1 | PLL Mux: 0 = all circuits associated with the MPEG PLL are connected to 27Mhz. 1 = all circuits associated with the MPEG PLL are connected to the MPEG PLL |
| 6-0 | R/W | 0 | PLL Output divider. The MPEG System clock equals the video PLL clock frequency divided by (N+1). Note: N must be odd (1,3,5,...) so that the MPEG clock is divided by an even number to generate a 50% duty cycle. |

HHI_VID_CLK_CNTL0x5f

8.8 Reset

8.8.1 Overview

As shown in figure below, A311D reset are designed as following:

Each reset includes 3 control registers, reg_reset, reg_reset_level, and reg_reset_mask, when write “1” to reg_reset, it will generate a signal: reset_pulse; most of module’s reset is negative, so reset_pulse will invert to reset_pulse_n; the usage of reg_reset_level is hold reset_pulse_n to “0”; the usage of reg_reset_mask is hold reset_pulse_n to “1”; ao module has special soft reset control; A53 has special soft reset control.

RESET0_MASK: 0xFFD01040

The Bits of this register correspond to the RESET[n] REGISTERs above. If a bit is set in this register, then when the watchdog timer fires, that particular module will NOT be reset.

RESET1_MASK: 0xFFD01044

The Bits of this register correspond to the RESET[n] REGISTERs above. If a bit is set in this register, then when the watchdog timer fires, that particular module will NOT be reset.

RESET2_MASK: 0xFFD01048

The Bits of this register correspond to the RESET[n] REGISTERs above. If a bit is set in this register, then when the watchdog timer fires, that particular module will NOT be reset.

RESET3_MASK: 0xFFD0104c

The Bits of this register correspond to the RESET[n] REGISTERs above. If a bit is set in this register, then when the watchdog timer fires, that particular module will NOT be reset.

RESET4_MASK: 0xFFD01050

The Bits of this register correspond to the RESET[n] REGISTERs above. If a bit is set in this register, then when the watchdog timer fires, that particular module will NOT be reset.

RESET6_MASK: 0xFFD01058

The Bits of this register correspond to the RESET[n] REGISTERs above. If a bit is set in this register, then when the watchdog timer fires, that particular module will NOT be reset.

RESET7_MASK: 0xFFD0105c

The Bits of this register correspond to the RESET[n] REGISTERs above. If a bit is set in this register, then when the watchdog timer fires, that particular module will NOT be reset.

RESET0_LEVEL: 0xFFD01080

The bits of this register correspond to the RESET[n] REGISTERs above. The default of this register is 0xFFFFFFFF. Setting any bit to 0, forces the corresponding RESET LOW. This registers allows the software to "Hold" a reset LOW (in a reset condition).

RESET1_LEVEL: 0xFFD01084

The bits of this register correspond to the RESET[n] REGISTERs above. The default of this register is 0xFFFFFFFF. Setting any bit to 0, forces the corresponding RESET LOW. This registers allows the software to "Hold" a reset LOW (in a reset condition).

RESET2_LEVEL: 0xFFD01088

The bits of this register correspond to the RESET[n] REGISTERs above. The default of this register is 0xFFFFFFFF. Setting any bit to 0, forces the corresponding RESET LOW. This registers allows the software to "Hold" a reset LOW (in a reset condition).

RESET3_LEVEL: 0xFFD0108c

The bits of this register correspond to the RESET[n] REGISTERs above. The default of this register is 0xFFFFFFFF. Setting any bit to 0, forces the corresponding RESET LOW. This registers allows the software to "Hold" a reset LOW (in a reset condition).

RESET4_LEVEL: 0xFFD01090

The bits of this register correspond to the RESET[n] REGISTERs above. The default of this register is 0xFFFFFFFF. Setting any bit to 0, forces the corresponding RESET LOW. This registers allows the software to "Hold" a reset LOW (in a reset condition).

RESET6_LEVEL: 0xFFD01098

The bits of this register correspond to the RESET[n] REGISTERs above. The default of this register is 0xFFFFFFFF. Setting any bit to 0, forces the corresponding RESET LOW. This registers allows the software to "Hold" a reset LOW (in a reset condition).

RESET7_LEVEL: 0xFFD0109c

The bits of this register correspond to the RESET[n] REGISTERs above. The default of this register is 0xFFFFFFFF. Setting any bit to 0, forces the corresponding RESET LOW. This registers allows the software to “Hold” a reset LOW (in a reset condition).

8.8.2.2 SEC Reset

Reset registers in EE domain are on cbus, so the final address = base_address(0xFF64E000) + address *4;

RESET0_SEC 0x00

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31-7 | R/W | 0 | Reserved |
| 6 | R/W | 0 | ao_mailbox |
| 5 | R/W | 0 | ao |
| 4 | R/W | 0 | dma |
| 3 | R/W | 0 | efuse |
| 2 | R/W | 0 | am_ring_osc |
| 1 | R/W | 0 | m4_cpu |
| 0 | R/W | 0 | ao_cpu |

RESET1_SEC 0x01

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------|
| 15 | R/W | 0 | sys_core3 |
| 14 | R/W | 0 | sys_core2 |
| 13 | R/W | 0 | sys_core1 |
| 12 | R/W | 0 | sys_core0 |
| 11 | R/W | 0 | sys_core3 |
| 10 | R/W | 0 | sys_core2 |
| 9 | R/W | 0 | sys_core1 |
| 8 | R/W | 0 | sys_core0 |
| 7 | R/W | 0 | sys_pll_div |
| 6 | R/W | 0 | preseln_sys_cpu_capb3 |
| 5 | R/W | 0 | rom_boot |
| 4 | R/W | 0 | syscpu_axi |
| 3 | R/W | 0 | syscpu_l2 |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------|
| 2 | R/W | 0 | syscpu_preset |
| 1 | R/W | 0 | syscpu_mbist |
| 0 | R/W | 0 | sys_cpu_cpu |

RESET0_SEC_LEVEL: 0xFF64E040

The bits of this register correspond to the RESET[n]_SEC REGISTERs above. The default of this register is 0xFFFFFFFF. Setting any bit to 0, forces the corresponding RESET LOW. This registers allows the software to “Hold” a reset LOW (in a reset condition).

RESET1_SEC_LEVEL: 0xFF64E044

The bits of this register correspond to the RESET[n]_SEC REGISTERs above. The default of this register is 0xFFFFFFFF. Setting any bit to 0, forces the corresponding RESET LOW. This registers allows the software to “Hold” a reset LOW (in a reset condition).

RESET0_SEC_MASK 0xFF64E080

The Bits of this register correspond to the RESET[n]_SEC REGISTERs above. If a bit is set in this register, then when the watchdog timer fires, that particular module will NOT be reset.

RESET1_SEC_MASK 0xFF64E084

The Bits of this register correspond to the RESET[n]_SEC REGISTERs above. If a bit is set in this register, then when the watchdog timer fires, that particular module will NOT be reset.

AO Soft Reset

AO_SOFT_RESET 0xFF800040

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|

8.9 GPIO

8.9.1 Overview

The SOC has a number of multi-function digital I/O pads that can be multiplexed to a number of internal resources (e.g. PWM generators, SDIO controllers). When a digital I/O is not being used for any specific purpose, it is converted to a general purpose GPIO pin. A GPIO pin can be statically set to high/low logical levels. The structure of a GPIO is given below.

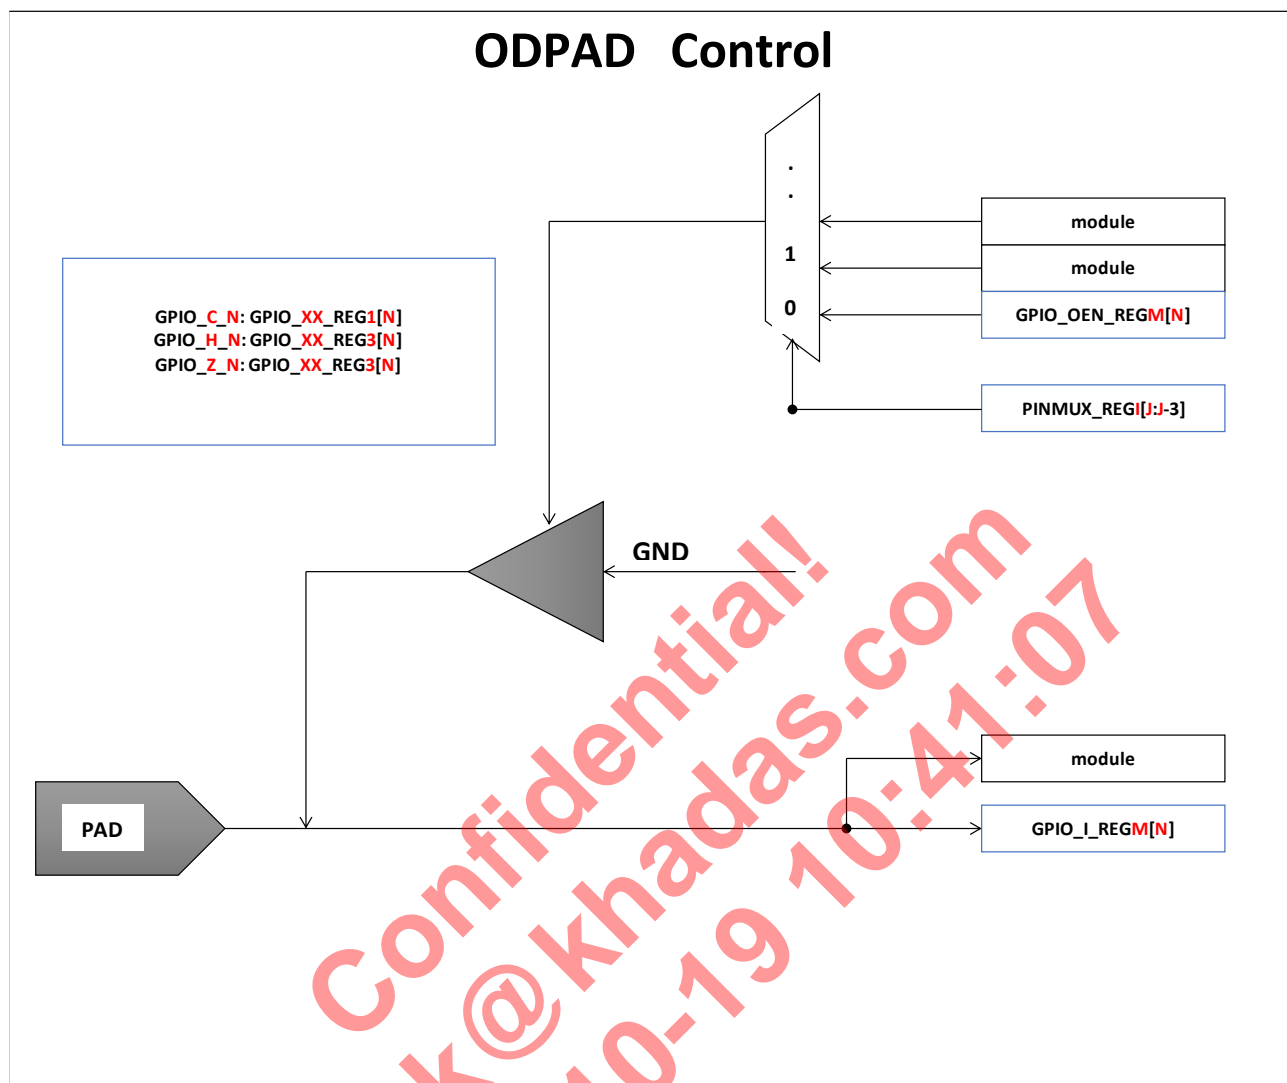

Figure 8-24 GPIO Structure

Each GPIO pad has 6 related registers, among which GPIO_O_REG is used to control the output of the pad, GPIO_I_REG is used to store the input value of the pad; GPIO_OEN_REG is used to enable GPIO output function, PINMUX_REG is used to define the function, GPIO_PULL_EN_REG is used to enable the pull-up function of GPIO pad, and GPIO_PULL_UP_REG is used to set the GPIO pull up/down. For AO GPIO pads, refer to AO GPIO registers.

There are OD pins that can not be used as output, with difference structure, shown as following.

Figure 8-25 OD Pad Structure

8.9.2 GPIO Multiplex Function

The GPIO multiplex functions are shown in the sections below, where the RegNN[MM] corresponds to CBUS registers defined in Table 8-23. The base address is 0xff634400 for PERIPHS_PIN_MUX_X, PREG_PAD_GPIO_EN_N, PREG_PAD_GPIO_O, PREG_PAD_GPIO_I, PAD_PULL_UP_EN_REG, PAD_PULL_UP_REG; and 0xff800000 for AO_RTI_PIN_MUX_REG, the final address is calculated as: final address = base address + offset*4.

Table 8-23 Pin Mux Registers

| Pin Mux Registers | Offset |
|-----------------------|--------|
| AO_GPIO_I | 0x0a |
| AO_GPIO_O | 0x0d |
| AO_GPIO_O_EN_N | 0x09 |
| AO_RTI_PULL_UP_REG | 0x0b |
| AO_RTI_PULL_UP_EN_REG | 0x0c |

| Pin Mux Registers | Offset |
|--------------------|--------|
| AO_PAD_DS_A | 0x07 |
| AO_PAD_DS_B | 0x08 |
| AO_RTI_PINMUX_REG0 | 0x05 |
| AO_RTI_PINMUX_REG1 | 0x06 |
| PERIPHS_PIN_MUX_0 | 0xb0 |
| PERIPHS_PIN_MUX_1 | 0xb1 |

8.9.3.2 Pad pull-up/down Direction

The I/O pads contain both a pull-up and a pull-down. If a bit is set to 1 in the registers below, then the pull-up is enabled. If a bit is set to 0, then the pull-down is enabled.

NOTE: There are separate pull-up “enables” that must also be set to 1 for the pull-up/down direction to function. If an “enable” is set to 0, then the pull-up/down feature is disabled, and the bits below are ignored (on a per pad basis).

PAD_PULL_UP_REG0 0x3a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------------|
| 31~16 | R/W | 0xcfff | Unused |
| 15~0 | R/W | | Boot[15:0] 1 = pull up. 0 = pull down |

PAD_PULL_UP_REG1 0x3b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------------|
| 31:7 | R/W | 0xff | Unused |
| 6~0 | R/W | | gpioC[6:0] 1 = pull up. 0 = pull down |

PAD_PULL_UP_REG2 0x3c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31~20 | R/W | 0x5ffbf | Reserved |
| 19~0 | R/W | | gpioX[19:0] 1 = pull up. 0 = pull down |

PAD_PULL_UP_REG3 0x3d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------------|
| 31~8 | R/W | 0x10f | Reserved |
| 7~4 | R/W | | gpioH[7:4] 1 = pull up. 0 = pull down |
| 3~0 | R/W | | Reserved |

PAD_PULL_UP_REG4 0x3e

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31~14 | R/W | 0xc1ff | Unused |
| 13~0 | R/W | | gpioZ[13:0] 1 = pull up. 0 = pull down |

PAD_PULL_UP_REG5 0x3f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31~16 | R/W | 0xc000 | Unused |
| 15~0 | R/W | | gpioA[15:0] 1 = pull up. 0 = pull down |

8.9.3.3 Pad Pull-Up/Down Enables

Each I/O pad has a selectable pull-up or pull-down resistor. For the pull-up direction (up or down) to be operational, the appropriate bit below must be set in order to enable the pull-up/down function.

PAD_PULL_UP_EN_REG0 0x48

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31~16 | R/W | 0xffff | Unused |
| 15~0 | R/W | | boot[15:0] pullup-enable: 1 = pullup or pull-down enabled. 0 = no-pull-up or pull-down |

PAD_PULL_UP_EN_REG1 0x49

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31~7 | R/W | 0xff | Unused |
| 6~0 | R/W | | gpioC[6:0] pullup-enable: 1 = pullup or pull-down enabled. 0 = no-pull-up or pull-down |

PAD_PULL_UP_EN_REG2 0x4a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31~20 | R/W | 0x7fff | Reserved |
| 19~0 | R/W | | gpioX[19:0] pullup-enable: 1 = pullup or pull-down enabled. 0 = no-pull-up or pull-down |

PAD_PULL_UP_EN_REG3 0x4b

| [27:26] | R/W | | BOOT_13 select |
| [29:28] | R/W | | BOOT_14 select |
| [31:30] | R/W | BOOT_15 select | |

PAD_DS_REG1A 0xd1

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|----------------|
| [1:0] | R/W | 0xaaaa9aaa | GPIOC_0 select |
| [3:2] | R/W | | GPIOC_1 select |
| [5:4] | R/W | | GPIOC_2 select |
| [7:6] | R/W | | GPIOC_3 select |
| [9:8] | R/W | | GPIOC_4 select |

| Bit(s) | R/W | Default | Description |
|---------|-----|---------|----------------|
| [11:10] | R/W | | GPIOC_5 select |
| [13:12] | R/W | | GPIOC_6 select |

PAD_DS_REG2A 0xd2

| Bit(s) | R/W | Default | Description |
|---------|-----|-----------------|-----------------|
| [1:0] | R/W | 0x55955aaa | GPIOX_0 select |
| [3:2] | R/W | | GPIOX_1 select |
| [5:4] | R/W | | GPIOX_2 select |
| [7:6] | R/W | | GPIOX_3 select |
| [9:8] | R/W | | GPIOX_4 select |
| [11:10] | R/W | | GPIOX_5 select |
| [13:12] | R/W | | GPIOX_6 select |
| [15:14] | R/W | | GPIOX_7 select |
| [17:16] | R/W | | GPIOX_8 select |
| [19:18] | R/W | | GPIOX_9 select |
| [21:20] | R/W | | GPIOX_10 select |
| [23:22] | R/W | | GPIOX_11 select |
| [25:24] | R/W | | GPIOX_12 select |
| [27:26] | R/W | | GPIOX_13 select |
| [29:28] | R/W | | GPIOX_14 select |
| [31:30] | R/W | GPIOX_15 select | |

PAD_DS_REG2B 0xd3

| Bit(s) | R/W | Default | Description |
|--------|-----|-----------|-----------------|
| [1:0] | R/W | 0xaaaaa55 | GPIOX_16 select |
| [3:2] | R/W | | GPIOX_17 select |
| [5:4] | R/W | | GPIOX_18 select |
| [7:6] | R/W | | GPIOX_19 select |

PAD_DS_REG3A 0xd4

| Bit(s) | R/W | Default | Description |
|---------|-----|------------|----------------|
| [9:8] | R/W | 0xaaaa55aa | GPIOH_4 select |
| [11:10] | R/W | | GPIOH_5 select |
| [13:12] | R/W | | GPIOH_6 select |
| [15:14] | R/W | | GPIOH_7 select |

PAD_DS_REG4A 0xd5

| Bit(s) | R/W | Default | Description |
|---------|-----|-----------------|-----------------|
| [1:0] | R/W | 0xaaaaaaaa5 | GPIOZ_0 select |
| [3:2] | R/W | | GPIOZ_1 select |
| [5:4] | R/W | | GPIOZ_2 select |
| [7:6] | R/W | | GPIOZ_3 select |
| [9:8] | R/W | | GPIOZ_4 select |
| [11:10] | R/W | | GPIOZ_5 select |
| [13:12] | R/W | | GPIOZ_6 select |
| [15:14] | R/W | | GPIOZ_7 select |
| [17:16] | R/W | | GPIOZ_8 select |
| [19:18] | R/W | | GPIOZ_9 select |
| [21:20] | R/W | | GPIOZ_10 select |
| [23:22] | R/W | | GPIOZ_11 select |
| [25:24] | R/W | | GPIOZ_12 select |
| [27:26] | R/W | GPIOZ_13 select | |

PAD_DS_REG5A 0xd6

| Bit(s) | R/W | Default | Description |
|---------|-----|------------|----------------|
| [1:0] | R/W | 0x5695555a | GPIOA_0 select |
| [3:2] | R/W | | GPIOA_1 select |
| [5:4] | R/W | | GPIOA_2 select |
| [7:6] | R/W | | GPIOA_3 select |
| [9:8] | R/W | | GPIOA_4 select |
| [11:10] | R/W | | GPIOA_5 select |

| Bit(s) | R/W | Default | Description |

| [29:28] | R/W | | GPIOA_14 select |
| [31:30] | R/W | | GPIOA_15 select |

8.9.3.8 GPIOAO Registers

AO_GPIO_I 0x0a

Always On GPIO Input levels

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R | 0 | TEST_N input level |
| 18:16 | R | 0 | INPUT_LEVELS: These bits correspond to the INPUT levels on the gpioE[2:0] pins |
| 11:0 | R | 0 | INPUT_LEVELS: These bits correspond to the INPUT levels on the gpioAO[11:0] pins |

AO_GPIO_O0x0d

Always On GPIO controls.

NOTE: This register is NOT reset during a watchdog event.

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31 | R/W | | TEST_N_OUTPUT_LEVEL: This bit controls the output level of the test_n pin when TEST_N_GPIO_EN_N is set to 0. |
| 18:16 | R/W | 0xffffffff | OUTPUT_LEVEL: These bits correspond to the output levels on the gpioE[2:0] pins when in GPIO mode. |
| 11:0 | R/W | | OUTPUT_LEVEL: These bits correspond to the output levels on the gpioAO[11:0] pins when in GPIO mode. |

AO_RTI_PINMUX_REG0 0x05

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------|
| 31:28 | R/W | 0 | gpioAO_7 select |

| | | | |
|-------|-----|---|-----------------|
| 27:24 | R/W | 0 | gpioAO_6 select |
| 23:20 | R/W | 0 | gpioAO_5 select |
| 19:16 | R/W | 0 | gpioAO_4 select |
| 15:12 | R/W | 0 | gpioAO_3 select |
| 11:8 | R/W | 0 | gpioAO_2 select |
| 7:4 | R/W | 0 | gpioAO_1 select |
| 3:0 | R/W | 0 | gpioAO_0 select |

AO_RTI_PINMUX_REG1 0x06

| Bit(s) | R/W | Default | Description |
|---------|-----|---------|------------------|
| 31:28 | R/W | 0 | gpioAO TEST_N |
| 27:24 | R/W | 0 | gpioE_2 select |
| [23:20] | R/W | 0 | gpioE_1 select |
| [19:16] | R/W | 0 | gpioE_0 select |
| [15:12] | R/W | 0 | gpioAO_11 select |
| [11:8] | R/W | 0 | gpioAO_10 select |
| [7:4] | R/W | 0 | gpioAO_9 select |
| [3:0] | R/W | 0 | gpioAO_8 select |

AO_GPIO_O_EN_N 0x09

Always On GPIO controls.

NOTE: This register is NOT reset during a watchdog event.

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 30-19 | R | 0xffffffff | Reserved |
| 18-16 | R/W | | OUTPUT_ENABLE: These bits correspond to the output levels on the gpioE[2:0] pins when in GPIO mode. A '0' sets the gpioE pin to be an output. |
| 15-12 | R | | Reserved |
| 11-0 | R/W | | OUTPUT_ENABLE: These bits correspond to the output levels on the gpioAO[11:0] pins when in GPIO mode. A '0' sets the gpioAO pin to be an output. |

AO_GPIO_I 0x0a

Always On GPIO Input levels

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------|
| 31 | R | 0 | TEST_N input level |

| | | | |
|-------|---|---|--|
| 18:16 | R | 0 | INPUT_LEVELS: These bits correspond to the INPUT levels on the gpioE[2:0] pins |
| 11-0 | R | 0 | INPUT_LEVELS: These bits correspond to the INPUT levels on the gpioAO[11:0] pins |

AO_RTI_PULL_UP_REG 0x0b

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31 | R/W | 0x800005ab | TEST_N pull up/down. 1 = pull-up 0 = pull-down |
| 18-16 | R/W | | gpioE[2:0] pull-up/down. 1 = pull-up 0 = pull-down |
| 11-0 | R/W | | gpioAO[11:0] pull up/down. 1 = pull-up 0 = pull-down |

AO_RTI_PULL_UP_EN_REG 0x0c

Always On GPIO controls.

NOTE: This register is NOT reset during a watchdog event.

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31 | R/W | 0x80040fff | TEST_N pull-up/down enable. 1 = pull-up/down enable, 0 = pull-up/down disable |
| 18-16 | R/W | | gpioE[2:0] pull-up/down enable. 1 = pull-up/down enable, 0 = pull-up/down disable |
| 11-0 | R/W | | gpioAO[11:0] pull-up/down enable. 1 = pull-up/down enable, 0 = pull-up/down disable |

AO_PAD_DS_A 0x07

Pad ds0/ds1

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--------------------|
| 23:22 | R/W | 0xaaaaaaaa | gpioAO_11{ds1 ds0} |
| 21:20 | R/W | | gpioAO_10{ds1 ds0} |
| 19:18 | R/W | | gpioAO_9{ds1 ds0} |
| 17:16 | R/W | | gpioAO_8{ds1 ds0} |
| 15:14 | R/W | | gpioAO_7{ds1 ds0} |
| 13:12 | R/W | | gpioAO_6{ds1 ds0} |
| 11:10 | R/W | | gpioAO_5{ds1 ds0} |
| 9:8 | R/W | | gpioAO_4{ds1 ds0} |
| 7:6 | R/W | | gpioAO_3{ds1 ds0} |
| 5:4 | R/W | | gpioAO_2{ds1 ds0} |
| 3:2 | R/W | | gpioAO_1{ds1 ds0} |
| 1:0 | R/W | | gpioAO_0 {ds1 ds0} |

AO_PAD_DS_B 0x08

Pad ds0/ds1

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--------------------|
| 31:30 | R/W | 0xaaaaaaaa | reset_n {ds1, ds0} |
| 29:28 | R/W | | test_n {ds1, ds0} |
| 5:4 | R/W | | gpioE_2 {ds1 ds0} |
| 3:2 | R/W | | gpioE_1 {ds1 ds0} |
| 1:0 | R/W | | gpioE_0 {ds1 ds0} |

AO_PINMUX_LOCK 0x17

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R/W | 0 | 1: generate error when write to each locked register; |
| 7 | R/W | 0 | lock ao gpio_o |
| 6 | R/W | 0 | lock ao gpio pull en |
| 5 | R/W | 0 | lock ao gpio pull up |
| 4 | R/W | 0 | lock ao gpio_o_en |
| 1 | R/W | 0 | lock ao pin_mux_reg1 |
| 0 | R/W | 0 | lock ao pin_mux_reg0 |

8.10 Interrupt Control

8.10.1 Overview

Generic Interrupt Controller (GIC) is a centralized resource that supports and manages interrupts in a system. For more details about GIC, please refer to the ARM GIC Architecture Specification V2.0.

8.10.2 Interrupt Source

There are 10 interrupts that are routed to all CPUs (A53/SCP..). The tables below outline the interrupts associated with each interrupt group:

There are 224 interrupt sources in the chip. All of the interrupts are connected to the integrated GIC in Cortex-A53 while the AO-CPU see a sub-set of the interrupts. The control Bits of AO-CPU interrupt are listed in the following table.

Table 8-33 EE Interrupt Source

| A53 GIC Bit | Interrupt Source | Description |
|-------------|------------------|-------------|
| 255 | pcie_A_7 | |
| 254 | pcie_A_6 | |

| A53 GIC Bit | Interrupt Source | Description |
|-------------|-------------------|-------------|
| 253 | pcie_A_5 | |
| 252 | pcie_A_4 | |
| 251 | pcie_A_3 | |
| 250 | pcie_A_2 | |
| 249 | pcie_A_1 | |
| 248 | pcie_A_0 | |
| 247 | m_i2c_2_irq | |
| 246 | m_i2c_1_irq | |
| 245 | mbox_irq_send5 | |
| 244 | mbox_irq_send4 | |
| 243 | mbox_irq_send3 | |
| 242 | mbox_irq_receiv2 | |
| 241 | mbox_irq_receiv1 | |
| 240 | mbox_irq_receiv0 | |
| 239 | ao_gpio_irq1 | |
| 238 | ao_gpio_irq0 | |
| 237 | ao_timerB_irq | |
| 236 | ao_timerA_irq | |
| 235 | cecb_irq | |
| 234 | ao_watchdog_irq | |
| 233 | ao_m_i2c_to_irq | |
| 232 | sar_adc_irq | |
| 231 | ao_cec_irq | |
| 230 | ao_ir_blaster_irq | |

GPIO Interrupt

There are 10 GPIO interrupts, SCP can respond to all of them, while A53 can respond to 8 of them (listed in Table 8-34, GIC bit 96~103). The figure below outlines the interrupts associated with each interrupt group:

Figure 8-26 A311D Interrupt

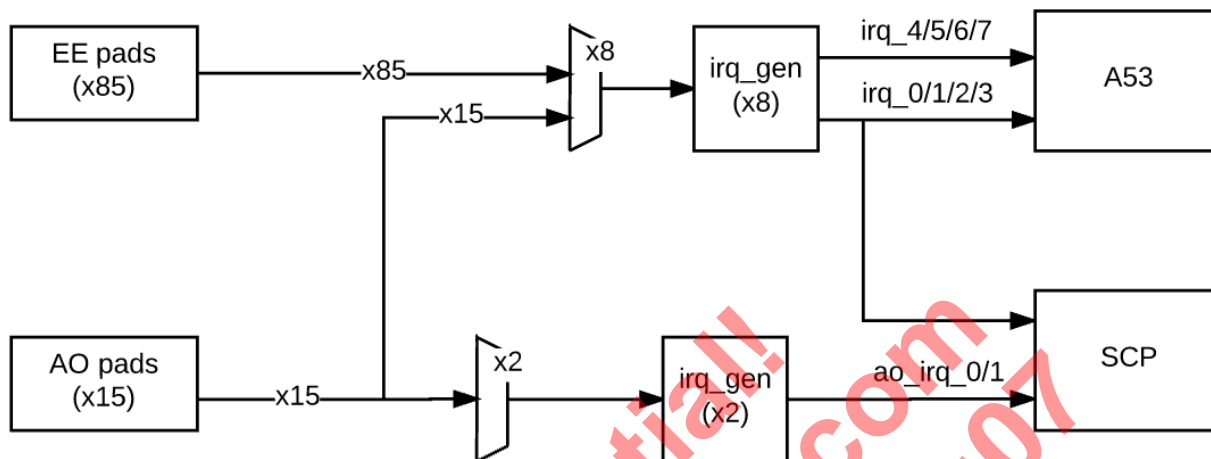

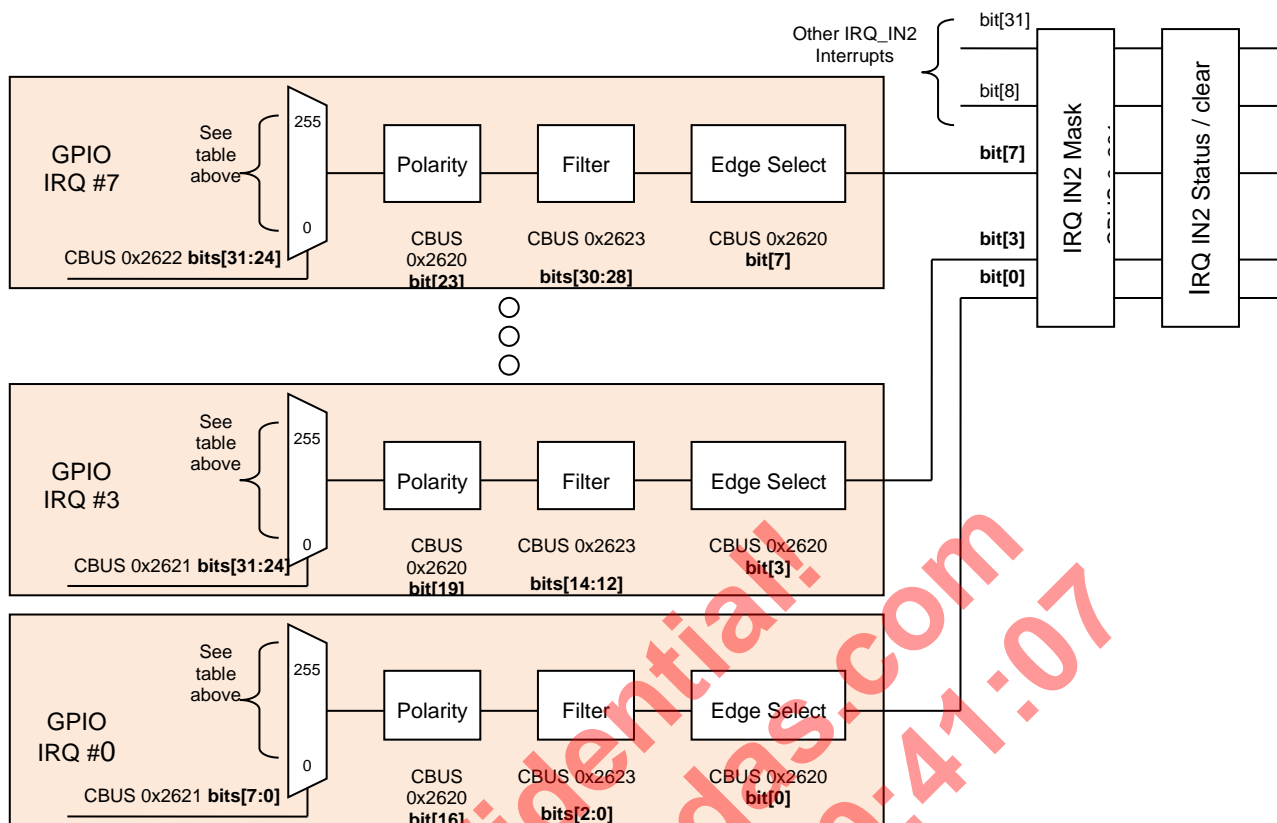

Table 8-34 GPIO Interrupt Sources

| Input Mux Location CBUS registers 0x2621 and 0x2622 | Description |
|--|-------------------------|
| [223:100] | Undefined(no interrupt) |
| [99:97] | gpioE[2:0] |
| [96:77] | gpioX[19:0] |
| [76:61] | gpioA[15:0] |
| [60:53] | gpioC[7:0] |
| [52:37] | Boot[15:0] |
| [36:28] | gpioH[8:0] |
| [27:12] | gpioZ[15:0] |
| [11:0] | gpioAO[11:0] |

The diagram below illustrates the path a GPIO takes to become an interrupt. The eight GPIO interrupts respond to the MASK, STATUS and STATUS/CLEAR registers just like any other interrupt in the chip. The difference for the GPIO interrupts is that they can be filtered and conditioned.

Figure 8-27 GPIO Interrupt Path

NOTE: The input for the GPIO interrupt module (the input into the 256:1 mux) comes directly from the I/O pad of the chip. Therefore, if a pad (say gpioA_11) is configured as a UART TX pin, then in theory, the UART TX pin can be a GPIO interrupt since the TX pin will drive gpioA_11 which in turn can drive the GPIO interrupt module.

8.10.3 Register Description

Each register final address = 0xffd00000 + address * 4

AO_IRQ_GPIO_REG 0x21

Interrupt masking and FIQ select

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-20 | R | 0 | Unused |
| 19 | R/W | 0 | GPIO_1_IRQ_EDGE: If this bit is 1, then GPIO_1_IRQ generates an interrupt on the rising (or falling edge if GPIO_1_POL is set) of the selected interrupt. |
| 18 | R/W | 0 | GPIO_0_IRQ_EDGE: If this bit is 1, then GPIO_0_IRQ generates an interrupt on the rising (or falling edge if GPIO_0_POL is set) of the selected interrupt. |
| 17 | R/W | 0 | GPIO_1_POL: This bit controls the polarity of the GPIO muxed into the GPIO_1 interrupt filter module |
| 16 | R/W | 0 | GPIO_0_POL: This bit controls the polarity of the GPIO muxed into the GPIO_0 interrupt filter module |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 15 | R/W | 0 | GPIO_1_FILTER_USE_CLK: Setting this bit to 1 connects the input filter to the system clock (the clock used by the media CPU). If this bit is 0, then the filter uses a 125nS clock to filter the GPIO_1 input |
| 14-12 | R/W | 0 | GPIO_1_FILTER_SEL: 0 = no filter, 1 = max filter (about 2.6uS) |
| 11 | R/W | 0 | GPIO_0_FILTER_USE_CLK |
| 10-8 | R/W | 0 | GPIO_0_FILTER_SEL: 0 = no filter, 1 = max filter (about 2.6uS) |
| 7-4 | R/W | 0 | GPIO_1_INPUT_SEL: These bits select which gpioAO[11:0] pin is connected to the GPIO_1 interrupt filter module. |
| 3-0 | R/W | 0 | GPIO_0_INPUT_SEL: These bits select which gpioAO[11:0] pin is connected to the GPIO_1 interrupt filter module. |

GPIO Interrupt EDGE and Polarity 0x3c20

This register controls the polarity of the GPIO interrupts and whether or not the interrupts are level or edge triggered. There are 8 GPIO interrupts. These 8 GPIO interrupts can be assigned to any one of up to 256 pins on the chip.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-24 | R | 0 | unused |
| 23 | | | GPIO_POLARITY_PATH_7: If a bit in this field is 1, then the GPIO signal for GPIO interrupt path 7 is inverted. |
| 22 | | | GPIO_POLARITY_PATH_6: |
| 21 | | | GPIO_POLARITY_PATH_5: |
| 20 | | | GPIO_POLARITY_PATH_4: |
| 19 | | | GPIO_POLARITY_PATH_3: |
| 18 | | | GPIO_POLARITY_PATH_2: |
| 17 | | | GPIO_POLARITY_PATH_1: |
| 16 | R/W | 0 | GPIO_POLARITY_PATH_0: |
| 15-8 | R | 0 | Unused |
| 7 | R/W | | GPIO_EDGE_SEL_PATH_7: If a bit is set to 1, then the GPIO interrupt for GPIO path 7 is configured to be an edge generated interrupt. If the polarity (above) is 0, then the interrupt is generated on the rising edge. If the polarity is 1, then the interrupt is generated on the falling edge of the GPIO. If a bit in this field is 0, then the GPIO is a level interrupt. |
| 6 | R/W | | GPIO_EDGE_SEL_PATH_6 |
| 5 | R/W | | GPIO_EDGE_SEL_PATH_5 |
| 4 | R/W | | GPIO_EDGE_SEL_PATH_4 |
| 3 | R/W | | GPIO_EDGE_SEL_PATH_3 |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|----------------------|
| 2 | R/W | | GPIO_EDGE_SEL_PATH_2 |
| 1 | R/W | | GPIO_EDGE_SEL_PATH_1 |
| 0 | R/W | 0 | GPIO_EDGE_SEL_PATH_0 |

GPIO 0 ~ 3 Pin Select 0x3c21

Each GPIO interrupt can select from any number of up to 256 GPIO pins on the chip. The Bits below control the pin selection for GPIO interrupts 0 ~3.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-24 | R/W | 0 | GPIO_PIN_SEL3: This value select which of up to 256 pins on the chip can be mapped to GPIO interrupt 3 |
| 23-16 | R/W | 0 | GPIO_PIN_SEL2: This value select which of up to 256 pins on the chip can be mapped to GPIO interrupt 2 |
| 15-8 | R/W | 0 | GPIO_PIN_SEL1: This value select which of up to 256 pins on the chip can be mapped to GPIO interrupt 1 |
| 7-0 | R/W | 0 | GPIO_PIN_SEL0: This value select which of up to 256 pins on the chip can be mapped to GPIO interrupt 0 |

GPIO 4 ~ 7 Pin Select 0x3c22

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-24 | R/W | 0 | GPIO_PIN_SEL7: This value select which of up to 256 pins on the chip can be mapped to GPIO interrupt 7 |
| 23-16 | R/W | 0 | GPIO_PIN_SEL6: This value select which of up to 256 pins on the chip can be mapped to GPIO interrupt 6 |
| 15-8 | R/W | 0 | GPIO_PIN_SEL5: This value select which of up to 256 pins on the chip can be mapped to GPIO interrupt 5 |
| 7-0 | R/W | 0 | GPIO_PIN_SEL4: This value select which of up to 256 pins on the chip can be mapped to GPIO interrupt 4 |

GPIO Filter Select (interrupts 0~7) 0x3c23

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------------|
| 31 | R/W | 0 | unused |
| 30-28 | R/W | 0 | FILTER_SEL7: (see FILTER_SELO) |
| 27 | R/W | 0 | Unused |
| 26-24 | R/W | 0 | FILTER_SEL6: (see FILTER_SELO) |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 23 | R/W | 0 | Unused |
| 22-20 | R/W | 0 | FILTER_SEL5: (see FILTER_SEL0) |
| 19 | R/W | 0 | Unused |
| 18-16 | R/W | 0 | FILTER_SEL4: (see FILTER_SEL0) |
| 15 | R/W | 0 | Unused |
| 14-12 | R/W | 0 | FILTER_SEL3: (see FILTER_SEL0) |
| 11 | R/W | 0 | Unused |
| 10-8 | R/W | 0 | FILTER_SEL2: (see FILTER_SEL0) |
| 7 | R/W | 0 | Unused |
| 6-4 | R/W | 0 | FILTER_SEL1: (see FILTER_SEL0) |
| 3 | R/W | 0 | unused |
| 2-0 | R/W | 0 | FILTER_SEL0: This value sets the filter selection for GPIO interrupt 0. A value of 0 = no filtering. A value of 7 corresponds to 7 x 3 x (111nS) of filtering. |

8.11 TIMER

8.11.1 Overview

The SOC contains 15 general purpose timers and 2 watchdog timers.

8.11.2 General-Purpose Timer

The SOC contains a number of general-purpose timers that can be used as general counters or interrupt generators. Each counter (except TIMER E) can be configured as a periodic counter (for generating periodic interrupts) or a simple count-down and stop counter. Additionally, the timers have a programmable count rate ranging from 1uS to 1mS. The table below outlines the general-purpose timers available in the chip.

Table 8-35 General-Purpose Timer

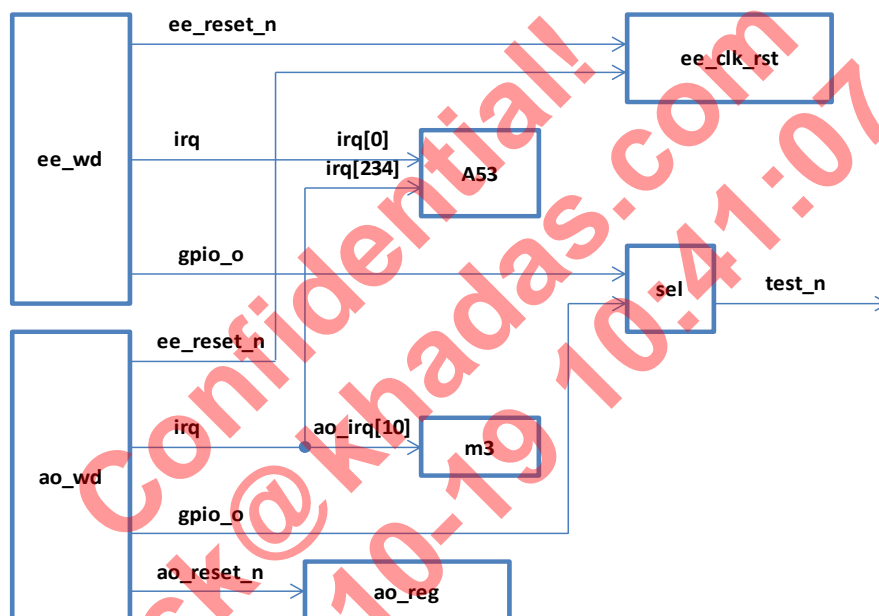

| Timer | Timebase Options | Counter size | Comment |
|------------|-------------------------------------|--------------|---|
| Timer A | 1uS, 10uS, 100uS, 1mS | 16-bits | The 16-bit counter allows the timer to generate interrupts as infrequent as every 65.535 Seconds |
| Timer B | 1uS, 10uS, 100uS, 1mS | 16-bits | |
| Timer C | 1uS, 10uS, 100uS, 1mS | 16-bits | |
| Timer D | 1uS, 10uS, 100uS, 1mS | 16-bits | |
| Timer E | System clock, 1uS, 10uS, 100uS, 1mS | 64-bits | Doesn't generate an interrupt. This is a count up counter that counts from 0 to 0xFFFFFFFF. The counter can be written at any time to reset the value to 0. |
| Timer F | 1uS, 10uS, 100uS, 1mS | 16-bits | |
| Timer G | 1uS, 10uS, 100uS, 1mS | 16-bits | |
| Timer H | 1uS, 10uS, 100uS, 1mS | 16-bits | |
| Timer I | 1uS, 10uS, 100uS, 1mS | 16-bits | |
| Timer A-AO | System clock, 1uS, 10uS, 100uS | 32-bits | Used in the Always On domain to generate interrupts for the AO-CPU |
| Timer B-AO | System clock, 1uS, 10uS, 100uS | 32-bits | Used in the Always On domain to generate interrupts for the AO-CPU |
| Timer C-AO | System clock, 1uS, 10uS, 100uS | 32-bits | Used in the Always On domain to generate interrupts for the AO-CPU |
| Timer E-AO | System clock | 64-bits | This Always On counter doesn't generate an interrupt. Instead it simply counts up from 0 to 0xFFFFFFFF. The counter can be written at any time to reset the value to 0. |

| Timer | Timebase Options | Counter size | Comment |
|------------|------------------|--------------|---|
| Timer F-AO | System clock | 64-bits | This Always On counter doesn't generate an interrupt. Instead it simply counts up from 0 to 0xFFFFFFFF. The counter can be written at any time to reset the value to 0. |
| Timer G-AO | System clock | 64-bits | This Always On counter doesn't generate an interrupt. Instead it simply counts up from 0 to 0xFFFFFFFF. The counter can be written at any time to reset the value to 0. |

8.11.3 Watchdog Timer

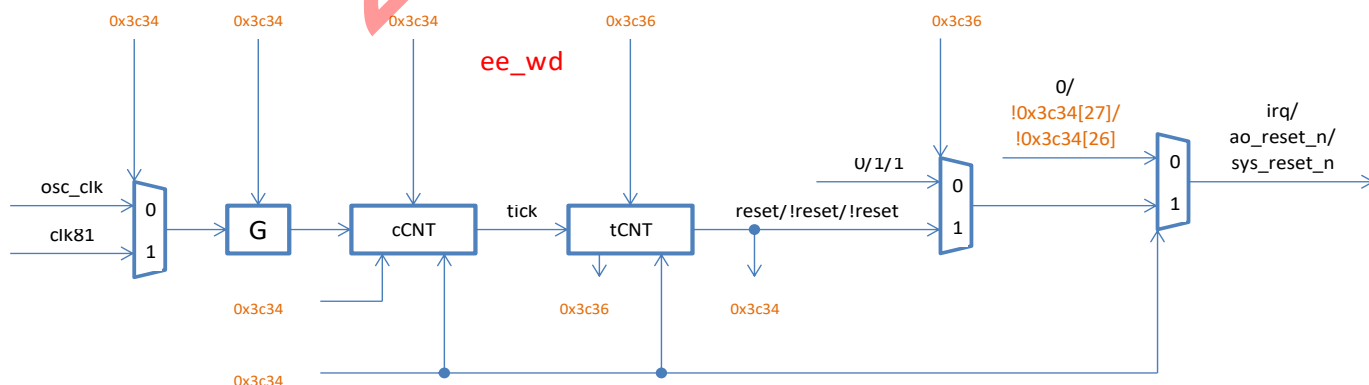

There are also two watchdog timers, one in AO and the other in EE domain, illustrated as following:

Figure 8-28 Watchdog Timer

AO domain watchdog timer and EE domain watchdog timer have the same design, as illustrated in the following figure:

Figure 8-29 EE domain Watchdog Timer Design

The AO Domain watchdog timer is driven from the system clock (typically 157Mhz). It is a 16-bit counter that is periodically reset by either the AO CPU or the System CPU (A53). This AO-watchdog timer can be used to generate an interrupt of the AO domain. Additionally, the AO-watchdog timer can be used to “enable” a delay generator that can toggle a GPIO pin (currently the TEST_n I/O pad). The “delay generator” allows an interrupt to first be acknowledged by the AO-CPU before the TEST_N pad is toggled. The “delay generator” is programmable from 1 to 65535 system clocks (typically 417uS).

It should be noted that the AO watchdog timer can also be used to reset the AO domain but this feature is only used when operating in a suspend mode (only the AO-domain is powered). As long as the system periodically resets the AO-watchdog timer the WD_GPIO_CNT (delay generator) will not be enabled and the I/O pad will not toggle.

NOTE:

The maximum delay between two AO-watchdog periodic resets is about 100mS (assuming a 157Mhz system clock).

The EE Domain watchdog timer is driven by the 24Mhz crystal clock and can be used to generate an interrupt to the system CPU (the A53) or optionally, the watchdog timer can completely reset the chip (causing a cold boot). There are a few registers that are not affected by watchdog timer. These registers are only reset by the external RESET_n I/O pad and can be used to store information related to a possible watchdog event. As long as the system CPU periodically resets the EE-watchdog timer, it will never timeout and cause an interrupt or system reset.

NOTE:

The maximum delay between two EE-watchdog periodic resets is about 8.3 Seconds. This time is independent of the system clocks and is driven by the external 24Mhz crystal.

8.11.4 Register Description

Each register final address = 0xffd00000 + address * 4

ISA_TIMER_MUX 0x3c50

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-20 | R | 0 | unused |
| 19 | R/W | 1 | TIMERD_EN: Set to 1 to enable Timer D |
| 18 | R/W | 1 | TIMERC_EN: Set to 1 to enable Timer C |
| 17 | R/W | 1 | TIMERB_EN: Set to 1 to enable Timer B |
| 16 | R/W | 1 | TIMERA_EN: Set to 1 to enable Timer A |
| 15 | R/W | 0 | TIMERD_MODE: If This bit is set to 1, then timerD is a periodic . 0 = one-shot timer |
| 14 | R/W | 0 | TIMERC_MODE: If This bit is set to 1, then timerC is a periodic . 0 = one-shot timer |
| 13 | R/W | 1 | TIMERB_MODE: If This bit is set to 1, then timerB is a periodic . 0 = one-shot timer |
| 12 | R/W | 1 | TIMERA_MODE: If This bit is set to 1, then timerA is a periodic . 0 = one-shot timer |
| 11 | R | 0 | unused |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 10-8 | R/W | 0x1 | TIMER E input clock selection: 000: System clock 001: 1uS Timebase resolution 010: 10uS Timebase resolution 011: 100uS Timebase resolution 100: 1mS timebase NOTE: The mux selection for Timer E is different from timer A, B, C and D |
| 7-6 | R/W | 0x0 | TIMER D input clock selection: See TIMER A below |
| 5-4 | R/W | 0x0 | TIMER C input clock selection: See TIMER A below |
| 2-3 | R/W | 0x0 | TIMER B input clock selection: See TIMER A below |
| 1-0 | R/W | 0x0 | TIMER A Input clock selection: These Bits select the input timebase for the counters for TimerA 00: 1uS Timebase resolution 01: 10uS Timebase resolution 10: 100uS Timebase resolution 11: 1mS Timebase resolution |

ISA_TIMER_A 0x3c51

Timer A is a 16 bit count DOWN counter driven by the clock selected in register 0x01000530. TIMER A will count down from some value to zero, generate an interrupt and then re-load the original start count value. This timer can be used to generate a periodic interrupt (e.g. interrupt every 22 uS).

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-16 | R | - | Current Count value |
| 15-0 | R/W | 0x0 | Starting count value. Write this value to start TIMER A. |

ISA_TIMER_B 0x3c52

Timer B is just like Timer A.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-16 | R | - | Current Count value |
| 15-0 | R/W | 0x0 | Starting count value. Write this value to start TIMER B |

ISA_TIMER_C 0x3c53

Timer C is just like Timer A.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31-16 | R | 0 | unused |

| | | | |
|------|-----|-----|---|
| 15-0 | R/W | 0x0 | Starting count value. Write this value to start TIMER C |
|------|-----|-----|---|

ISA_TIMERD 0x3c54

Timer D is identical to Timer A.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-16 | R | 0 | unused |
| 15-0 | R/W | 0x0 | Starting count value. Write this value to start TIMER D |

ISA_TIMERE 0x3c62

Timer E is simply a32-bit counter that increments at a rate set by register 0x2650. To reset the counter to zero, simply write this register with any value. The value below is a read-only value that reflects the current count of the internal counter. This register can be used by software to simply provide a polling delay loop based on a programmable timebase.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-0 | R | - | Current value of Timer E. Write this register with any value to clear the counter. |

ISA_TIMERE_HI 0x3c63

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-0 | R | - | Current value of Timer E[63:32]. Need read ISA_TIMERE first. |

ISA_TIMER_MUX1 0x3c64

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-20 | R | 0 | unused |
| 19 | R/W | 1 | TIMERI_EN: Set to 1 to enable Timer I |
| 18 | R/W | 1 | TIMERH_EN: Set to 1 to enable Timer H |
| 17 | R/W | 1 | TIMERG_EN: Set to 1 to enable Timer G |
| 16 | R/W | 1 | TIMERF_EN: Set to 1 to enable Timer F |
| 15 | R/W | 0 | TIMERI_MODE: If This bit is set to 1, then timerI is a periodic . 0 = one-shot timer |
| 14 | R/W | 0 | TIMERH_MODE: If This bit is set to 1, then timerH is a periodic . 0 = one-shot timer |
| 13 | R/W | 1 | TIMERG_MODE: If This bit is set to 1, then timerG is a periodic. 0 = one-shot timer |
| 12 | R/W | 1 | TIMERF_MODE: If This bit is set to 1, then timerF is a periodic. 0 = one-shot timer |
| 11 | R | 0 | unused |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 10-8 | R/W | 0x1 | TIMER J input clock selection: 000: System clock 001: 1uS Timebase resolution 010: 10uS Timebase resolution 011: 100uS Timebase resolution 100: 1mS timebase NOTE: The mux selection for Timer J is different from timer F, G, H and I |
| 7-6 | R/W | 0x0 | TIMER I input clock selection: See TIMER F below |
| 5-4 | R/W | 0x0 | TIMER H input clock selection: See TIMER F below |
| 2-3 | R/W | 0x0 | TIMER G input clock selection: See TIMER F below |
| 1-0 | R/W | 0x0 | TIMER F Input clock selection: These Bits select the input timebase for the counters for TimerF 00: 1uS Timebase resolution 01: 10uS Timebase resolution 10: 100uS Timebase resolution 11: 1mS Timebase resolution |

ISA_TIMERF 0x3c65

Timer F is a 16 bit count DOWN counter driven by the clock selected in register 0x01000530. TIMER A will count down from some value to zero, generate an interrupt and then re-load the original start count value. This timer can be used to generate a periodic interrupt (e.g. interrupt every 22 uS).

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-16 | R | - | Current Count value |
| 15-0 | R/W | 0x0 | Starting count value. Write this value to start TIMER A. |

ISA_TIMERG 0x3c66

Timer G is just like Timer F.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-16 | R | - | Current Count value |
| 15-0 | R/W | 0x0 | Starting count value. Write this value to start TIMER B |

ISA_TIMER_H 0x3c67

Timer H is just like Timer F.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-16 | R | 0 | unused |
| 15-0 | R/W | 0x0 | Starting count value. Write this value to start TIMER C |

ISA_TIMER_I 0x3c68

Timer I is just like Timer F.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-16 | R | 0 | unused |
| 15-0 | R/W | 0x0 | Starting count value. Write this value to start TIMER I |

WATCHDOG_CNTL 0x3c34

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R | 0 | Watchdog_reset |
| 30-28 | R/W | 0 | Reserved |
| 27 | R/W | 0 | Ao_reset_n_now, if watchdog_en =0, output ao_reset_n = !ao_reset_n_now |
| 26 | R/W | 0 | Sys_reset_n_now, if watch_dog_en = 0, output sys_reset_n = !sys_reset_n_now. |
| 25 | R/W | 0 | Clk_div_en: 0: no tick; 1: generate tick; |
| 24 | R/W | 0 | Clk_en: 0: no clk; 1: clk work; |
| 23 | R/W | 0 | Interrupt_en: 0: no irq out; 1: irq = watchdog_reset; |
| 22 | R/W | 0 | Ao_reset_n_en: 0: output ao_reset_n = 1; 1: output ao_reset_n = ! watchdog_reset; |
| 21 | R/W | 0 | Sys_reset_n_en 0: output sys_reset_n = 1; 1: output sys_reset_n = ! watchdog_reset; |
| 20 | R/W | 0 | Reserved |
| 19 | R/W | 0 | Clk_sel: 0:osc_clk; 1:clk_81 |
| 18 | R/W | 0 | Watchdog_en 0: no watchdog reset 1: gen watchdog reset |
| 17-0 | R/W | 0 | Clk_div_tcmt, when clk_div_en is 1, generate a tick each tcmt clock |

WATCHDOG_CNTL1 0x3c35

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-18 | R | 0 | Reserved |
| 17 | R/W | 0 | Gpio_pulse 0:level reset 1:pulse reset |
| 16 | R/W | 0 | Gpio_polarity 0: 1 is reset; 1: 0 is reset. |
| 15-0 | R/W | 0 | Gpio_pulse_tcmt If gpio_pulse is 1, level reset will hold tcmt clock. |

WATCHDOG_TCNT 0x3c36

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-16 | R | 0 | The cnt of tick. |
| 15-0 | R/W | 5000 | If watchdog_en is 1, when tick cnt reached "5000", generate watchdog_reset. |

WATCHDOG_RESET0x3c37

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-0 | W | 0 | When write any value(include 0), watchdog module will be reset. |

Below registers have the same base address: 0xFF800000, register address: 0xFF800000 + offset * 4, same for secure and non-secure access

AO_TIMER_CTRL 0xf0

Timer controls.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-7 | R/W | 0 | Unused |
| 6-5 | R/W | 0 | TIMERE_CLK_MUX: 00 = Timer E clock = Media CPU clock 01 = Timer E clock = 1uS ticks 10 = Timer E clock = 10uS ticks 11 = Timer E clock = 100uS ticks |
| 4 | R/W | 0 | TIMER_E_EN |
| 3 | R/W | 0 | TIMER_A_EN |
| 2 | R/W | 0 | TIMER_A_MODE: 1 = periodic, 0 = one-shot |

| 1-0 | R/W | 0 | TIMERC_CLK_MUX: 00 = Timer C clock = Media CPU clock 01 = Timer C clock = 1uS ticks 10 = Timer C clock = 10uS ticks 11 = Timer C clock = 100uS ticks |
|-----|-----|---|--|

AO_TIMERA_REG 0xf3

Timer A starts at a non-zero value and decrements to 0. When timer A reaches a count of 0 it will re-load with the TIMER_A_TCNT value.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-0 | R/W | 0 | timer A set value; if mode = 0, will clr timer to 0; |

AO_TIMERA_CUR_REG 0xf4

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------|
| 31-0 | R | 0 | TIMER A current count. |

AO_TIMERB_REG 0xf5

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-0 | R/W | 0 | timer B set value; if mode = 0, will clr timer to 0; |

AO_TIMERB_CUR_REG 0xf6

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------|
| 31-0 | R | 0 | TIMER B current count. |

AO_TIMERC_REG 0xf7

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-0 | R/W | 0 | timer C set value; if mode = 0, will clr timer to 0; |

AO_TIMERC_CUR_REG 0xf8

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------|
| 31-0 | R | 0 | TIMER C current count. |

AO_TIMERE_REG 0xf9

If this register is written (with any value), then Timer E is reset to 0. Immediately after being cleared, timer E will start incrementing at a clock rate equal to the clock used for the Media CPU..

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------|
| 31-0 | R/W | 0 | TIMER E current Count[31:0] |

AO_TIMERE_HI_REG 0xfa

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-0 | R/W | 0 | TIMER E current Count[63:32], latched by read timerE[31:0]; |

AO_TIMERF_REG 0xfb

If this register is written (with any value), then Timer F is reset to 0. Immediately after being cleared, timer F will start incrementing at a clock rate equal to the clock used for the Media CPU..

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------|
| 31-0 | R/W | 0 | TIMER F current Count[31:0] |

AO_TIMERF_HI_REG 0xfc

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-0 | R/W | 0 | TIMER F current Count[63:32], latched by read timerF[31:0]; |

AO_TIMERG_REG 0xfd

If this register is written (with any value), then Timer G is reset to 0. Immediately after being cleared, timer G will start incrementing at a clock rate equal to the clock used for the Media CPU..

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------|
| 31-0 | R/W | 0 | TIMER G current Count[31:0] |

AO_TIMERG_HI_REG 0xfe

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-0 | R/W | 0 | TIMER G current Count[63:32], latched by read timerG[31:0]; |

AO_WATCHDOG_CNTL 0x48

| A53/Secure | A53/Non Secure | M3/Secure | M3/Non Secure | Reset by watchdog |
|------------|----------------|-----------|---------------|-------------------|
| R/W | R/W | R/W | R/W | Yes |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------|
| 31-28 | R | 0 | unused |
| 27 | R/W | 0 | Ao_reset_n_now |
| 26 | R/W | 0 | Sys_reset_n_now |
| 25 | R/W | 0 | Clk_div_en |
| 24 | R/W | 1 | Clk_en |
| 23 | R/W | 0 | Interrupt_en |

| 31-17 | R | 0 | unused |
| 17 | R/W | 0 | Gpio_pulse |
| 16 | R/W | 0 | Gpio_polarity |
| 15-0 | R/W | 0 | Gpio_pulse_tcmt |

AO_WATCHDOG_TCNT 0x4a

| A53/Secure | A53/Non Secure | M3/Secure | M3/Non Secure | Reset by watchdog |
|------------|----------------|-----------|---------------|-------------------|
| R/W | R/W | R/W | R/W | Yes |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------|
| 31-16 | R | 0 | Watchdog count read |
| 15-0 | R/W | 0 | Watchdog_count set |

AO_WATCHDOG_RESET 0x4b

| A53/Secure | A53/Non Secure | M3/Secure | M3/Non Secure | Reset by watchdog |
|------------|----------------|-----------|---------------|-------------------|
| R/W | R/W | R/W | R/W | Yes |

Write any value can reset watchdog.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------|
| 31-0 | W | 0 | Watchdog soft reset |

8.12 Crypto

8.12.1 Overview

The crypto engine is one encrypt/decrypt function accelerator. It supports both encryption/decryption and signature/verification. Crypto engine supports 4 different modes, i.e. A53 secure, A53 non secure, M3 secure and M3 non secure. The crypto engine has special internal DMA controller to transfer data.

It has the following features:

- AES block cipher with 128/192/256 Bits keys, standard 16 bytes block size and streaming ECB, CBC and CTR modes
- DES/TDES block cipher with ECB and CBC modes supporting 64 Bits key for DES and 192 Bits key for 3DES
- Hardware key-ladder operation and DVB-CSA for transport stream encryption
- Built-in hardware True Random Number Generator (TRNG), CRC and SHA-1/SHA-2 engine

8.12.2 Key Ladder

The Key Ladder is a series of TDES / AES crypto processes that iterates on different user supplied and OTP keys. The key ladder module uses a single AES / TDES crypto module and iterates using internal storage to hold temporary states.

8.12.3 RNG

Functionality the Random Number Generator (RNG) contains two main modules: True Random Number Generator (TRNG) and Deterministic Random Number Generator (DRNG).

True Random Number Generator (TRNG): this TRNG is realized by using metastability and jitter for random bit generation based on four free running ring oscillator

Deterministic Random Number Generator (DRNG): this DRNG, which has 32-bit random number generator, is mainly designed to increase the throughput and do post-processing of the Digital TRNG, which will need hundreds cycles to collect entropy.

8.12.4 EFUSE

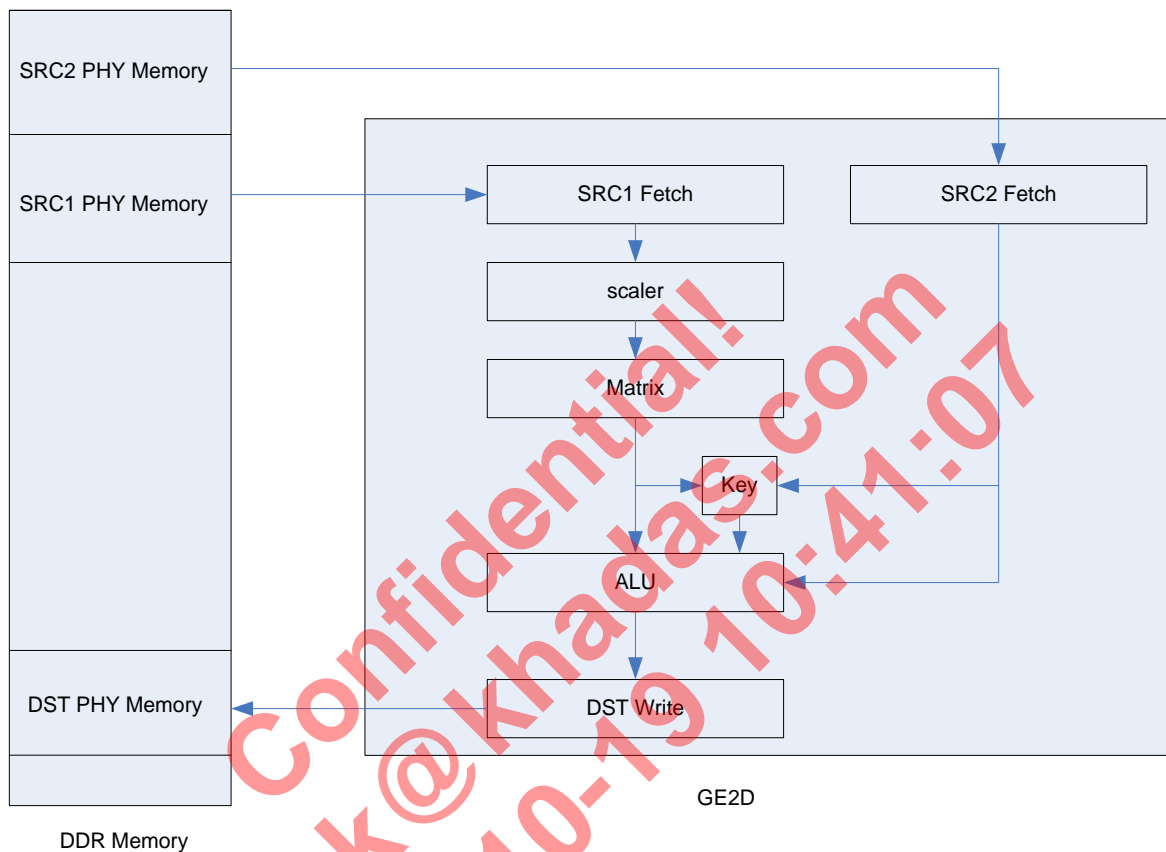

The EFUSE consists of a 4kbit One Time Programmable (OTP) memory that is broken up into 32, 128-bit blocks. Data is always read/written in 128-bit blocks using the APB bus (software) or by the Key-ladder which is integrated with EFUSE block.

9. GE2D

9.1 Overview

The basic structure of GE2D is shown in Fig below.

Figure 9-1 GE2D Structure

9.2 Register Description

GE2D_GEN_CTRL0 0x8A0

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | DST_BYTEMASK_ONLY: Applicable only if DST_BITMASK_EN=1. |
| 30 | R/W | 0 | DST_BITMASK_EN: destination bitmask enable. 0: disable; 1: enable. |
| 29 | R/W | 0 | SRC2_KEY_EN: source2 key enable. 0: disable; 1: enable. |
| 28 | R/W | 0 | SRC2_KEY_MODE: source2 key mode. |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| | | | 0: mask data when match; 1: mask data when unmatched. |
| 27 | R/W | 0 | SRC1_KEY_EN: source1 key enable. 0: disable; 1: enable. |
| 26 | R/W | 0 | SRC1_KEY_MODE: source1 key mode. 0: mask data when match; 1: mask data when unmatched. |
| 25-24 | R/W | 0 | DST1_8B_MODE_SEL: Destination 1's 8-bit mode component selection. 0: Select Y or R; 1: Select Cb or G; 2: Select Cr or B; 3: Select Alpha. |
| 23 | R/W | 0 | DST_CLIP_MODE: 0: Write inside clip window; 1: Write outside clip window. |
| 22-17 | R | 0 | Unused |
| 16-15 | R/W | 0 | SRC2_8B_MODE_SEL: Applicable only when SRC2_FORMAT=0, define the property of the 8-bit output data. 0: The 8-bit output data is for Y or R; 1: The 8-bit output data is for Cb or G; 2: The 8-bit output data is for Cr or B; 3: The 8-bit output data is for Alpha. |
| 14 | R/W | 0 | SRC2_FILL_MODE: When the display window is outside the boundary of the clipping window, this field defines how to fill the area outside the clipping window. 0: Fill with the pixels at the boundary of the clipping window; 1: Fill with the default color defined by register GE2D_SRC2_DEF_COLOR. |
| 13-12 | R/W | 0 | SRC2_PIC_STRUCT: Define how source2 reads the picture stored in DDR memory. 0: Read all lines; 1: Reserved; 2: Read even lines only; 3: Read odd lines only. |
| 11 | R/W | 0 | SRC2_X_YC_RATIO: Source2 x direction yc ratio. 0: 1:1; 1: 2:1. |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 9-7 | R | 0 | Unused |
| 6-5 | R/W | 0 | <p>SRC1_8B_MODE_SEL: Applicable only when SRC1_SEP_EN=0, SRC1_FORMAT=0 and SRC1_LUT_EN=0, define the property of the 8-bit output data.</p> <p>0: the 8-bit output data is for Y or R; 1: the 8-bit output data is for Cb or G; 2: the 8-bit output data is for Cr or B; 3: the 8-bit output data is for Alpha.</p> |
| 4 | R/W | 0 | <p>SRC1_FILL_MODE: When the display window is outside the boundary of the clipping window, this field defines how to fill the area outside the clipping window.</p> <p>0: Fill with the pixels at the boundary of the clipping window; 1: Fill with the default color defined by register GE2D_SRC1_DEF_COLOR.</p> |
| 3 | R/W | 0 | <p>SRC1_LUT_EN: Applicable only when SRC1_SEP_EN=0 and SRC1_FORMAT=0, define whether to enable 8-bit input data to look up a 32-bit pixel for output.</p> <p>0: Disable; 1: Enable.</p> |
| 2-1 | R/W | 0 | <p>SRC1_PIC_STRUCT: Define how source1 reads the picture stored in DDR memory.</p> <p>0: Read all lines; 1: Reserved; 2: Read even lines only; 3: Read odd lines only.</p> |

GE2D_GEN_CTRL1 0x8A1

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R/W | 0 | SOFT_RST: If true, reset GE2D. |
| 30 | R/W | 0 | dst write response counter reset |
| 29 | R/W | 0 | disable adding dst write response count to busy bit |
| 28-27 | R | 0 | Unused |
| 26 | R/W | 0 | <p>COLOR_CONVERSION_MODE[1] in alu. Mode[1:0]</p> <p>3 : color_out = color; 2 : color_out = (color != 255) ? color : color + 1; 1 : color_out = (color < 128) ? color : color + 1; 0 : color_out = (color == 0) ? color : color + 1.</p> |
| 25-24 | R/W | 0 | <p>INTERRUPT_CTRL: If bit[0] true, generate interrupt when one command done; if bit[1] true, generate interrupt when ge2d change from busy to not busy.</p> |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 23-22 | R/W | 0x3 | SRC2_BURST_SIZE_CTRL: Source2 DDR request burst size control. (Note: data to source2 are stored together in one DDR memory block.) 0: Burst size = 24 x 64-bit; 1: Burst size = 32 x 64-bit; 2: Burst size = 48 x 64-bit; 3: Burst size = 64 x 64-bit. |
| 21-16 | R/W | 0x3F | SRC1_BURST_SIZE_CTRL: Source1 DDR request burst size control. Bit[21:20] control Y burst size, bit[19:18] control Cb burst size, bit[17:16] control Cr burst size. Each 2-bit is decoded as below: 0: Burst size = 24 x 64-bit; 1: Burst size = 32 x 64-bit; 2: Burst size = 48 x 64-bit; 3: Burst size = 64 x 64-bit. |
| 15-14 | R/W | 0 | DST1_PIC_STRUCT: Define how destination 1 write the picture to DDR memory. 0: Write all lines (whole frame); 1: Reserved; 2: Write even lines only (top); 3: Write odd lines only (bottom). |
| 13-12 | R/W | 0 | SRC_RD_CTRL: Bit[13] if true, force read src1, bit[12] if true, force read src2. |
| 11 | R/W | 0 | DST2_URGENT_EN: Destination 2 DDR request urgent enable. |
| 10 | R/W | 0 | SRC1_URGENT_EN: Source1 DDR request urgent enable. |
| 9 | R/W | 0 | SRC2_URGENT_EN: Source2 DDR request urgent enable. |
| 8 | R/W | 0 | DST1_URGENT_EN: Destination 1 DDR request urgent enable. |
| 7-0 | R/W | 0 | SRC1_GB_ALPHA: Source1 global alpha. |

GE2D_GEN_CTRL2 0x8A2

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | ALPHA_CONVERSION_MODE[0] in alu. Mode[1:0]: 2,3 : alpha_out = (alpha!=255) ? alpha : alpha + 1; 1 : alpha_out = (alpha < 128) ? alpha : alpha + 1; 0 : alpha_out = (alpha == 0) ? alpha : alpha + 1. |
| 30 | R/W | 0 | COLOR_CONVERSION_MODE[0] in alu. Mode[1:0] 3 : color_out = color; |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| | | | <p>2 : color_out = (color != 255) ? color : color + 1;</p> <p>1 : color_out = (color < 128) ? color : color + 1;</p> <p>0 : color_out = (color == 0) ? color : color + 1.</p> |
| 29 | R/W | 0 | <p>SRC1_GB_ALPHA_EN in alu.</p> <p>As = src1_gb_alpha_en ? Asr * Ag : Asr</p> |
| 28 | R/W | 0 | <p>DST1_COLOR_ROUND_MODE.</p> <p>1 = Truncate the full bit color components to required output bit width;</p> <p>0 = Round (+ 0.5) the full bit color components to required output bit width.</p> |
| 27 | R/W | 0 | <p>SRC2_COLOR_EXPAND_MODE.</p> <p>1 = Expand the color components to 8-bit by padding LSBs with MSBs. E.g. If the input is 5'b11000, the output is expanded to 8'b11000110;</p> <p>0 = Expand the color components to 8-bit by padding LSBs with 0.</p> |
| 26 | R/W | 0 | <p>SRC2_ALPHA_EXPAND_MODE.</p> <p>1 = Expand alpha value to 8-bit by padding LSBs with MSBs. E.g. If the input is 5'b11000, the output is expanded to 8'b11000110;</p> <p>0 = If input alpha value is all 1, then expand the value to 8-bit by padding LSBs with 1; otherwise, pad LSBs with 0.</p> |
| 25 | R/W | 0 | <p>SRC1_COLOR_EXPAND_MODE.</p> <p>1 = Expand the color components to 8-bit by padding LSBs with MSBs. E.g. If the input is 5'b11000, the output is expanded to 8'b11000110;</p> <p>0 = Expand the color components to 8-bit by padding LSBs with 0.</p> |
| 24 | R/W | 0 | <p>SRC1_ALPHA_EXPAND_MODE.</p> <p>1 = Expand alpha value to 8-bit by padding LSBs with MSBs. E.g. If the input is 5'b11000, the output is expanded to 8'b11000110;</p> <p>0 = If input alpha value is all 1, then expand the value to 8-bit by padding LSBs with 1; otherwise, pad LSBs with 0.</p> |
| 23 | R/W | 0 | <p>DST_LITTLE_ENDIAN: define the endianness of SRC2 input data.</p> <p>1 = Little endian;</p> <p>0 = Big endian.</p> |
| 22-19 | R/W | 0 | <p>DST1_COLOR_MAP: Applicable to 16-bit, 24-bit and 32-bit pixel, defines the bit-field allocation of the pixel data. For whether to truncate or round full 8-bit to output, refer to GE2D_GEN_CTRL2.DST1_COLOR_ROUND_MODE.</p> |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| | | | <p>For 16-bit mode (DST1_FORMAT=1):</p> <p>0 = Unused;</p> <p>1 = 6:5:5 format. Bit[15:10] is Y[7:2] or R[7:2], bit[9:5] is Cb[7:3] or G[7:3], bit[4:0] is Cr[7:3] or B[7:3];</p> <p>2 = 8:4:4 format. | Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R/W | 0 | SRC1 clip x start extra, if true, one more data is read for chroma. |
| 30-29 | R | 0 | Unused. |
| 28-16 | R/W | 0 | SRC1 clip x start. |
| 15 | R/W | 0 | SRC1 clip x end extra, if true, one more data is read for chroma. |
| 14-13 | R | 0 | Unused. |
| 12-0 | R/W | 0x1FFF | SRC1 clip x end. |

GE2D_SRC1_CLIPY_START_END 0x8A8

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------|
| 30-29 | R | 0 | Unused. |
| 28-16 | R/W | 0 | SRC1 clip y start. |
| 14-13 | R | 0 | Unused. |
| 12-0 | R/W | 0x1FFF | SRC1 clip y end. |

GE2D_SRC1_CANVAS 0x8A9

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-24 | R/W | 0 | SRC1 canvas address0, for Y only or Y/Cb/Cr stored together. |
| 7-0 | R | 0 | Unused. |

GE2D_SRC1_X_START_END 0x8AA

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R/W | 0 | SRC1 x start extra bit1, if true, one more chroma data is read for x even start chroma data when y/c ratio = 2 or x even/odd start chroma extra data when y/c ratio = 1 |
| 30 | R/W | 0 | SRC1 x start extra bit0, if true, one more chroma data is read for x odd start chroma data when y/c ratio = 2 |
| 29-16 | R/W | 0 | SRC1 x start, signed data |
| 15 | R/W | 0 | SRC1 x end extra bit1, if true, one more chroma data is read for x odd end chroma data when y/c ratio = 2 or x even/odd end chroma extra data when y/c ratio = 1 |
| 14 | R/W | 0 | SRC1 x end extra bit0, if true, one more chroma data is read for x even end chroma data when y/c ratio = 2 |
| 13-0 | R/W | 0 | SRC1 x end, signed data. |

GE2D_SRC1_Y_START_END 0x8AB

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R/W | 0 | SRC1 y start extra bit1, if true, one more chroma line is read for y even start chroma data when y/c ratio = 2 or x even/odd start chroma extra data when y/c ratio = 1 |
| 30 | R/W | 0 | SRC1 y start extra bit0, if true, one more chroma line is read for y odd start chroma data when y/c ratio = 2 |
| 29-16 | R/W | 0 | SRC1 y start, signed data |
| 15 | R/W | 0 | SRC1 y end extra bit1, if true, one more chroma line is read for y odd end chroma data when y/c ratio = 2 or y even/odd end chroma extra data when y/c ratio = 1 |
| 14 | R/W | 0 | SRC1 y end extra bit0, if true, one more chroma line is read for y even end chroma data when y/c ratio = 2 |
| 13-0 | R/W | 0 | SRC1 y end, signed data. |

GE2D_SRC1_LUT_ADDR 0x8AC

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-9 | R | 0 | Unused. |
| 8 | R/W | 1 | 0 = Write LUT, 1 = Read LUT. |
| 7-0 | R/W | 0 | LUT_ADDR: The initial read or write address of the look-up table |

GE2D_SRC1_LUT_DAT 0x8AD

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------|
| 31-24 | R/W | 0 | Current LUT entry's Y or R |
| 23-16 | R/W | 0 | Current LUT entry's Cb or G |
| 15-8 | R/W | 0 | Current LUT entry's Cr or B |
| 7-0 | R/W | 0 | Current LUT entry's Alpha. |

GE2D_SRC1_FMT_CTRL 0x8AE

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-20 | R | 0 | Unused. |
| 19 | R/W | 0 | SRC1_CHFMT_RPT_PIX: if true, horizontal formatter using repeat to get the pixel, otherwise using interpolation. |
| 18 | R/W | 0 | SRC1_CHFMT_EN: horizontal formatter enable. |
| 17 | R/W | 0 | SRC1_CVFMT_RPT_PIX: if true, vertical formatter using repeat to get the pixel, otherwise using interpolation. |
| 16 | R/W | 0 | SRC1_CVFMT_EN: vertical formatter enable. |
| 15-8 | R/W | 0 | SRC1_X_CHR_PHASE: X direction chroma phase, Bit[15:12] for x direction even start/end chroma phase when y/c ratio = 2 or start/end even/odd chroma phase when y/c ratio = 1; Bit[11:8] for x direction odd start/end chroma phase only when y/c ratio = 2. |
| 7-0 | R/W | 0 | SRC1_Y_CHR_PHASE: Y direction chroma phase. Bit[7:4] for y direction even start/end chroma phase when y/c ratio = 2 or start/end even/odd chroma phase when y/c ratio = 1; Bit[3:0] for y direction odd start/end chroma phase only when y/c ratio = 2. |

GE2D_SRC2_DEF_COLOR 0x8AF

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------|
| 31-24 | R/W | 0 | Default Y or R. |
| 23-16 | R/W | 0x80 | Default Cb or G. |
| 15-8 | R/W | 0x80 | Default Cr or B. |
| 7-0 | R/W | 0 | Default Alpha. |

GE2D_SRC2_CLIPX_START_END 0x8B0

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------|
| 31-29 | R | 0 | Unused. |
| 28-16 | R/W | 0 | SRC2 clip x start. |

| Bit(s) | R/W | Default | Description |

| 31-29 | R | 0 | Unused. |
| 28-16 | R/W | 0 | DST y start. |
| 15-13 | R | 0 | Unused. |
| 12-0 | R/W | 0 | DST y end. |

GE2D_SRC2_DST_CANVAS 0x8B8

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|----------------------|
| 31-24 | R | 0 | Unused. |
| 23-16 | R/W | 0 | DST2 canvas address. |
| 15-8 | R/W | 0 | SRC2 canvas address. |
| 7-0 | R/W | 0 | DST1 canvas address. |

GE2D_VSC_START_PHASE_STEP 0x8B9

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--------------|
| 31-29 | R | 0 | Unused. |
| 28-0 | R/W | 0x01000000 | 5.24 format. |

GE2D_VSC_PHASE_SLOPE 0x8BA

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------|
| 31-25 | R | 0 | Unused. |
| 24-0 | R/W | 0 | Signed data. |

GE2D_VSC_INI_CTRL 0x8BB

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------------|
| 31 | R | 0 | Unused. |
| 30-29 | R/W | 0 | vertical repeat line0 number. |
| 28-24 | R | 0 | Unused. |
| 23-0 | R/W | 0 | vertical scaler initial phase. |

GE2D_HSC_START_PHASE_STEP 0x8BC

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--------------|
| 31-29 | R | 0 | Unused. |
| 28-0 | R/W | 0x01000000 | 5.24 format. |

GE2D_HSC_PHASE_SLOPE 0x8BD

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------|
| 31-25 | R | 0 | Unused. |
| 24-0 | R/W | 0 | Signed data. |

GE2D_HSC_INI_CTRL 0x8BE

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|----------------------------------|
| 31 | R | 0 | Unused. |
| 30-29 | R/W | 0 | horizontal repeat line0 number. |
| 28-24 | R | 0 | Unused. |
| 23-0 | R/W | 0 | horizontal scaler initial phase. |

GE2D_HSC_ADV_CTRL 0x8BF

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-24 | R/W | 0 | advance number in this round, if horizontal scaler is working on dividing mode. |
| 23-0 | R/W | 0 | horizontal scaler advance phase in this round, if horizontal scaler is working on dividing mode. |

GE2D_SC_MISC_CTRL 0x8C0

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R | 0 | Unused. |
| 30 | R/W | 0 | VSC_NEAREST_EN: vertical nearest mode enable, must set vt_bank_length = 4. |
| 29 | R/W | 0 | HSC_NEAREST_EN: horizontal nearest mode enable, must set hz_bank_length = 4. |

| | | | |
|-------|-----|---|--|
| 28 | R/W | 0 | HSC_DIV_EN: horizontal scaler dividing mode enable. |
| 27-15 | R/W | 0 | HSC_DIV_LENGTH: horizontal dividing length, if bit 25 is enable. |
| 14 | R/W | 0 | pre horizontal scaler enable. |
| 13 | R/W | 0 | pre vertical scale enable. |
| 12 | R/W | 0 | vertical scale enable. |
| 11 | R/W | 0 | horizontal scaler enable. |
| 10 | R | 0 | Unused. |
| 9 | R/W | 0 | HSC_RPT_CTRL: if true, treat horizontal repeat line number(GE2D_HSC_INI_CTRL bit 30:29) as repeating line, otherwise using treat horizontal repeat line number as minus line number. |
| 8 | R/W | 0 | VSC_RPT_CTRL: if true, treat vertical repeat line number(GE2D_VSC_INI_CTRL bit 30:29) as repeating line, otherwise using treat vertical repeat line number as minus line number. |
| 7 | R/W | 0 | VSC_PHASE0_ALWAYS_EN: if true, always use phase0 in vertical scaler. |
| 6-4 | R/W | 2 | VSC_BANK_LENGTH: vertical scaler bank length. |
| 3 | R/W | 0 | HSC_PHASE0_ALWAYS_EN: if true, always use phase0 in horizontal scaler. |
| 2-0 | R/W | 2 | HSC_BANK_LENGTH: horizontal scaler bank length. |

GE2D_VSC_NRND_POINT 0x8C1

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-14 | R | 0 | Unused. |
| 13-0 | R | 0 | vertical scaler next round integer pixel pointer, signed data. |

GE2D_VSC_NRND_PHASE 0x8C2

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------------|
| 31-24 | R | 0 | Unused. |
| 23-0 | R | 0 | vertical scaler next round phase. |

GE2D_HSC_NRND_POINT 0x8C3

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-14 | R | 0 | Unused. |
| 13-0 | R | 0 | horizontal scaler next round integer pixel pointer, signed data. |

| 15 | R/W | 0 | 0: vd_format doesnt have onoff mode, 1: vd format has onoff mode. |
| 14-0 | R/W | 0 | DP off counter. |

GE2D_SCALE_COEF_IDX 0x8D4

Because there are many coefficients used in the vertical filter and horizontal filters, indirect access the coefficients of vertical filter and horizontal filter is used. For vertical filter, there are 33x4 coefficients. For horizontal filter, there are 33x4 coefficients

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-16 | R | 0 | Unused. |
| 15 | R/W | 0 | index increment, if bit9 == 1 then (0: index increase 1, 1: index increase 2) else (index increase 2). |
| 14 | R/W | 0 | 1: read coef through cbus enable, just for debug purpose in case when we wanna check the coef in ram in correct or not. |
| 13-10 | R | 0 | Unused. |
| 9 | R/W | 0 | if true, use 9bit resolution coef, other use 8bit resolution coef. |
| 8 | R/W | 0 | type of index, 0: vertical coef; 1: horizontal coef. |
| 7 | R | 0 | Unused. |
| 6-0 | R/W | 0 | coef index. |

GE2D_SCALE_COEF 0x8D5

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-0 | R/W | 0 | coefficients for vertical filter and horizontal filter. |

GE2D_SRC_OUTSIDE_ALPHA 0x8D6

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-25 | R | 0 | Unused. |
| 24 | R/W | 0 | src2 alpha fill mode: together with GE2D_GEN_CTRL0[14](fill_mode), define what alpha values are used. 0: repeat inner alpha, 1: fill src2 outside alpha. for the area outside the clipping window. As below: fill_mode=0, alpha_fill_mode=0 : use inner alpha, (or default_alpha if src data have no alpha values); fill_mode=0, alpha_fill_mode=1 : use outside_alpha; fill_mode=1, alpha_fill_mode=0 : use default_alpha; fill_mode=1, alpha_fill_mode=1 : use outside_alpha. |
| 23-16 | R/W | 16 | src2 outside alpha. |
| 15-9 | R | 0 | Unused. |
| 8 | R/W | 1 | src1 alpha fill mode, refer to src2 alpha fill mode above. |
| 7-0 | R/W | 0 | src1 outside alpha. |

GE2D_ANTIFLICK_CTRL0 0x8D8

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | antiflick enable |
| 24 | R/W | 0 | 1: alpha value for the first line use repeated alpha, 0: use bit 23:16 as the first line alpha |
| 23-16 | R/W | 0 | register value for the first line alpha when bit 24 is 1. |
| 8 | R/W | 0 | 1: alpha value for the last line use repeated alpha, 0: use bit 7:0 as the last line alpha |
| 7-0 | R/W | 0 | register value for the last line alpha when bit 8 is 1. |

GE2D_ANTIFLICK_CTRL1 0x8D9

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 25 | R/W | 0 | rgb_sel, 1: antiflick RGBA, 0: antiflick YCbCrA |
| 24 | R/W | 0 | cbr_en, 1: also filter cbr in case of antiflicking YCbCrA, 0: no filter on cbr in case of antiflicking YCbCrA |
| 23-16 | R/W | 0 | R mult coef for converting RGB to Y |
| 15- 8 | R/W | 0 | G mult coef for converting RGB to Y |

| Bit(s) | R/W | Default | Description |
|---|-----|---------|-------------------------------------|
| 7-0 | R/W | 0 | B mult coef for converting RGB to Y |
| $Y = (R * y_r + G * y_g + B * y_b) / 256$ | | | |

GE2D_ANTIFLICK_COLOR_FILT0 0x8DA

| Bit(s) | R/W | Default | Description |
|---|-----|---------|--|
| 31-24 | R/W | 0 | Y threshold1, when $0 < Y \leq th1$, use filter0. |
| 23-16 | R/W | 0 | color antiflick filter0 n3 |
| 15- 8 | R/W | 0 | color antiflick filter0 n2 |
| 7-0 | R/W | 0 | color antiflick filter0 n1 |
| $Y = (line_up * n1 + line_center * n2 + line_dn * n3) / 128$ | | | |

GE2D_ANTIFLICK_COLOR_FILT1 0x8DB

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-24 | R/W | 0 | Y threshold2, when $th1 < Y \leq th2$, use filter1. |
| 23-16 | R/W | 0 | color antiflick filter1 n3 |
| 15- 8 | R/W | 0 | color antiflick filter1 n2 |
| 7-0 | R/W | 0 | color antiflick filter1 n1 |

GE2D_ANTIFLICK_COLOR_FILT2 0x8DC

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-24 | R/W | 0 | Y threshold3, when $th2 < Y \leq th3$, use filter2 ; $Y > th3$, use filter3. |
| 23-16 | R/W | 0 | color antiflick filter2 n3 |
| 15- 8 | R/W | 0 | color antiflick filter2 n2 |
| 7-0 | R/W | 0 | color antiflick filter2 n1 |

GE2D_ANTIFLICK_COLOR_FILT3 0x8DD

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|----------------------------|
| 23-16 | R/W | 0 | color antiflick filter3 n3 |
| 15- 8 | R/W | 0 | color antiflick filter3 n2 |
| 7-0 | R/W | 0 | color antiflick filter3 n1 |

GE2D_ANTIFLICK_ALPHA_FILT0 0x8DE

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-24 | R/W | 0 | Alpha threshold1, when $0 < Alpha \leq th1$, use filter0. |
| 23-16 | R/W | 0 | Alpha antiflick filter0 n3 |

| | | | |
|-------|-----|---|----------------------------|
| 15- 8 | R/W | 0 | Alpha antiflick filter0 n2 |
| 7-0 | R/W | 0 | Alpha antiflick filter0 n1 |

$\text{Alpha} = (\text{line_up} * \text{n1} + \text{line_center} * \text{n2} + \text{line_dn} * \text{n3}) / 128$

GE2D_ANTIFLICK_ALPHA_FILT1 0x8DF

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-24 | R/W | 0 | Alpha threshold2, when $\text{th1} < \text{Alpha} \leq \text{th2}$, use filter1. |
| 23-16 | R/W | 0 | Alpha antiflick filter1 n3 |
| 15- 8 | R/W | 0 | Alpha antiflick filter1 n2 |
| 7-0 | R/W | 0 | Alpha antiflick filter1 n1 |

GE2D_ANTIFLICK_ALPHA_FILT2 0x8E0

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-24 | R/W | 0 | Alpha threshold3, when $\text{th2} < \text{Alpha} \leq \text{th3}$, use filter2; $\text{Alpha} > \text{th3}$, use filter3. |
| 23-16 | R/W | 0 | Alpha antiflick filter2 n3 |
| 15- 8 | R/W | 0 | Alpha antiflick filter2 n2 |
| 7-0 | R/W | 0 | Alpha antiflick filter2 n1 |

GE2D_ANTIFLICK_ALPHA_FILT3 0x8E1

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|----------------------------|
| 23-16 | R/W | 0 | Alpha antiflick filter3 n3 |
| 15- 8 | R/W | 0 | Alpha antiflick filter3 n2 |
| 7-0 | R/W | 0 | Alpha antiflick filter3 n1 |

GE2D_SRC1_RANGE_MAP_Y_CTRL 0x8E3

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------|
| 30-22 | R/W | 0 | din_offset (signed data) |
| 21-14 | R/W | 0 | map_coef (unsigned data) |
| 13- 10 | R/W | 0 | map_sr (unsigned data) |
| 9-1 | R/W | 0 | dout_offset (signed data) |
| 0 | R/W | 0 | enable |

$\text{dout} = \text{clipto_0_255}(((\text{din} + \text{din_offset}) * \text{map_coef} + ((1 \ll (\text{map_sr} - 1))) \gg \text{map_sr} + \text{dout_offset})$

GE2D_SRC1_RANGE_MAP_CB_CTRL 0x8E4

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------|
| 30-22 | R/W | 0 | din_offset (signed data) |

| | | | |
|--------|-----|---|---------------------------|
| 21-14 | R/W | 0 | map_coef (unsigned data) |
| 13- 10 | R/W | 0 | map_sr (unsigned data) |
| 9-1 | R/W | 0 | dout_offset (signed data) |
| 0 | R/W | 0 | enable |

$dout = \text{clipto_0_255}(((\text{din} + \text{din_offset}) * \text{map_coef} + ((1 \ll (\text{map_sr} - 1))) \gg \text{map_sr} + \text{dout_offset})$

GE2D_SRC1_RANGE_MAP_CR_CTRL 0x8E5

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------|
| 30-22 | R/W | 0 | din_offset (signed data) |
| 21-14 | R/W | 0 | map_coef (unsigned data) |
| 13- 10 | R/W | 0 | map_sr (unsigned data) |
| 9-1 | R/W | 0 | dout_offset (signed data) |
| 0 | R/W | 0 | enable |

$dout = \text{clipto_0_255}(((\text{din} + \text{din_offset}) * \text{map_coef} + ((1 \ll (\text{map_sr} - 1))) \gg \text{map_sr} + \text{dout_offset})$

GE2D_ARB_BURST_NUM 0x8E6

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------------|
| 21-16 | R/W | 0x3f | Src1 prearbitor burst number |
| 13-8 | R/W | 0x3f | Src2 prearbitor burst number |
| 5-0 | R/W | 0x3f | dst prearbitor burst number |

GE2D_TID_TOKEN 0x8E7

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 21-16 | R/W | 0x3f | Src1 ID. High 4bit are thread ID, low 2bits are the token |
| 13-8 | R/W | 0x3f | Src2 ID. High 4bit are thread ID, low 2bits are the token |
| 5-0 | R/W | 0x3f | dst ID. High 4bit are thread ID, low 2bits are the token |

GE2D_GEN_CTRL3 0x8E8

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-28 | R/W | 0 | DST2_BYTEMASK_VAL: 1-bit mask for each byte (8-bit). Applicable only if both dst_bitmask_en=1 and dst_bytemask_only=1. |
| 27-26 | R/W | 0 | DST2_PIC_STRUCT: Define how destination 2 write the picture to DDR memory. 0: Write all lines (whole frame); 1: Reserved; 2: Write even lines only (top); 3: Write odd lines only (bottom). |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 25-24 | R/W | 0 | <p>DST2_8B_MODE_SEL: Destination 8-bit mode component selection.</p> <p>0: Select Y or R; 1: Select Cb or G; 2: Select Cr or B; 3: Select Alpha.</p> |
| 23 | R | 0 | Unused |
| 22-19 | R/W | 0 | <p>DST2_COLOR_MAP: Applicable to 16-bit, 24-bit and 32-bit pixel, defines the bit-field allocation of the pixel data. For whether to truncate or round full 8-bit to output, refer to GE2D_GEN_CTRL3.DST2_COLOR_ROUND_MODE.</p> <p>For 16-bit mode (DST2_FORMAT=1):</p> <p>0 = Unused; 1 = 6:5:5 format. Bit[15:10] is Y[7:2] or R[7:2], bit[9:5] is Cb[7:3] or G[7:3], bit[4:0] is Cr[7:3] or B[7:3]; 2 = 8:4:4 format. Bit[15:8] is Y or R, bit[7:4] is Cb[7:4] or G[7:4], bit[3:0] is Cr[7:4] or B[7:4]; 3 = 6:4:4:2 format. Bit[15:10] is Y[7:2] or R[7:2], bit[9:6] is Cb[7:4] or G[7:4], bit[5:2] is Cr[7:4] or B[7:4], bit[1:0] is Alpha[7:6]; 4 = 4:4:4:4 format. Bit[15:12] is Y[7:4] or R[7:4], bit[11:8] is Cb[7:4] or G[7:4], bit[7:4] is Cr[7:4] or B[7:4], bit[3:0] is Alpha[7:4]; 5 = 5:6:5 format. Bit[15:11] is Y[7:3] or R[7:3], bit[10:5] is Cb[7:2] or G[7:2], bit[4:0] is Cr[7:3] or B[7:3]; 6 = 4:4:4:4 format. Bit[15:12] is Alpha[7:4], bit[11:8] is Y[7:4] or R[7:4], bit[7:4] is Cb[7:4] or G[7:4], bit[3:0] is Cr[7:4] or B[7:4]; 7 = 1:5:5:5 format. Bit[15] is Alpha[7], bit[14:10] is Y[7:3] or R[7:3], bit[9:5] is Cb[7:3] or G[7:3], bit[4:0] is Cr[7:3] or B[7:3]; 8 = 4:6:4:2 format. Bit[15:12] is Y[7:4] or R[7:4], bit[11:6] is Cb[7:2] or G[7:2], bit[5:2] is Cr[7:4] or B[7:4], bit[1:0] is Alpha[1:0]; 9 = CbCr format. Bit[15:8] is Cb, bit[7:0] is Cr; 10 = CrCb format. Bit[15:8] is Cr, bit[7:0] is Cb.</p> <p>For 24-bit mode (DST2_FORMAT=2):</p> <p>0 = RGB 8:8:8 mode. Bit[23:16] is Y or R, bit[15:8] is Cb or G, bit[7:0] is Cr or B; 1 = RGBA 5:6:5:8 mode. Bit[23:19] is Y[7:3] or R[7:3], bit[18:13] is Cb[7:2] or G[7:2], bit[12:8] is Cr[7:3] or B[7:3], bit[7:0] is Alpha; 2 = ARGB 8:5:6:5 mode. Bit[23:16] is Alpha, bit[15:11] is Y[7:3] or R[7:3], bit[10:5] is Cb[7:2] or G[7:2], bit[4:0] is Cr[7:3] or B[7:3]; 3 = RGBA 6:6:6:6 mode. Bit[23:18] is Y[7:2] or R[7:2], bit[17:12] is Cb[7:2] or G[7:2], bit[11:6] is Cr[7:2] or B[7:2], bit[5:0] is Alpha[7:2]; 4 = ARGB 6:6:6:6 mode. Bit[23:18] is Alpha[7:2], bit[17:12] is Y[7:2] or R[7:2], bit[11:6] is Cb[7:2] or G[7:2], bit[5:0] is Cr[7:2] or B[7:2]; 5 = BGR 8:8:8 mode. Bit[23:16] is Cr or B, bit[15:8] is Cb or G, bit[7:0] is Y or R.</p> <p>For 32-bit mode (DST2_FORMAT=3):</p> |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| | | | <p>0 = RGBA 8:8:8:8 format. Bit[31:24] is Y or R, bit[23:16] is Cb or G; bit[15:8] is Cr or B; bit[7:0] is Alpha;</p> <p>1 = ARGB 8:8:8:8 format. Bit[31:24] is Alpha, bit[23:16] is Y or R; bit[15:8] is Cb or G; bit[7:0] is Cr or B;</p> <p>2 = ABGR 8:8:8:8 format. Bit[31:24] is Alpha, bit[23:16] is Cr or B; bit[15:8] is Cb or G; bit[7:0] is Y or R;</p> <p>3 = BGRA 8:8:8:8 format. Bit[31:24] is Cr or B, bit[23:16] is Cb or G; bit[15:8] is Y or R; bit[7:0] is Alpha.</p> |
| 18 | R | 0 | Unused |
| 17-16 | R/W | 0 | <p>DST2_FORMAT: define DST2 output pixel byte-width.</p> <p>0: Output pixel is 1-byte (8-bit) color component;</p> <p>1: Output pixel is 2-byte (16-bit), refer to GE2D_GEN_CTRL3.DST2_COLOR_MAP for further pixel color mapping;</p> <p>2: Output pixel is 3-byte (24-bit), refer to GE2D_GEN_CTRL3.DST2_COLOR_MAP for further pixel color mapping;</p> <p>3: Output pixel is 4-byte (32-bit), refer to GE2D_GEN_CTRL3.DST2_COLOR_MAP for further pixel color mapping.</p> |
| 15 | R | 0 | Unused |
| 14 | R/W | 0 | <p>DST2_COLOR_ROUND_MODE.</p> <p>1 = Truncate the full bit color components to required output bit width;</p> <p>0 = Round (+ 0.5) the full bit color components to required output bit width.</p> |
| 13-12 | R/W | 0 | <p>DST2_X_DISCARD_MODE: Define how DST2 discard X direction data before writing to DDR.</p> <p>Note: x is post reverse/rotation.</p> <p>0: No discard;</p> <p>1: Reserved;</p> <p>2: discard even x;</p> <p>3: discard odd x.</p> |
| 11-10 | R/W | 0 | <p>DST2_Y_DISCARD_MODE: Define how DST2 discard Y direction data before writing to DDR.</p> <p>Note: y is post reverse/rotation.</p> <p>0: No discard;</p> <p>1: Reserved;</p> <p>2: discard even y;</p> <p>3: discard odd y.</p> |

| 8 | R/W | 0 | <p>DST2_ENABLE:</p> <p>0: Disable destination 2;</p> <p>1: Enable destination 2.</p> |
| 7-6 | R | 0 | Unused |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 5-4 | R/W | 0 | DST1_X_DISCARD_MODE: Define how DST1 discard X direction data before writing to DDR. Note: x is post reverse/rotation. 0: No discard; 1: Reserved; 2: discard even x; 3: discard odd x. |
| 3-2 | R/W | 0 | DST1_Y_DISCARD_MODE: Define how DST1 discard Y direction data before writing to DDR. Note: y is post reverse/rotation. 0: No discard; 1: Reserved; 2: discard even y; 3: discard odd y. |
| 1 | R | 0 | Unused |
| 0 | R/W | 1 | DST1_ENABLE: 0: Disable destination 1; 1: Enable destination 1. |

GE2D_STATUS2 0x8E9

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------|
| 13-12 | R | 0 | ge2d_dst1.ctrl_status |
| 11 | R | 0 | ge2d_dst1.map_srdy |
| 10 | R | 0 | ge2d_dst1.map_d1_srdy |
| 9 | R | 0 | ge2d_dst1.s_v |
| 8 | R | 0 | ge2d_dst1.ofifo_dout_srdy |
| 7-1 | R | 0 | ge2d_dst1.ofifo_cnt |
| 0 | R | 0 | ge2d_dst1.dst_busy |

GE2D_GEN_CTRL4 0x8EA

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------|
| 0 | R/W | 0 | dis_dp_hang_bugfix. |

GE2D_DST1_BADDR_CTRL 0x8f1

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------------|
| 31-0 | R/W | 0 | DST1 base address in 64bits. |

GE2D_DST1_STRIDE_CTRL 0x8f2

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------|
| 19-0 | R/W | 0 | DST1 stride size in 64bits. |

GE2D_SRC1_BADDR_CTRL 0x8f3

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------------|
| 31-0 | R/W | 0 | SRC1 base address in 64bits. |

GE2D_SRC1_STRIDE_CTRL 0x8f4

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------|
| 19-0 | R/W | 0 | SRC1 stride size in 64bits. |

GE2D_SRC2_BADDR_CTRL 0x8f5

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------------|
| 31-0 | R/W | 0 | SRC2 base address in 64bits. |

GE2D_SRC2_STRIDE_CTRL 0x8f6

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------|
| 19-0 | R/W | 0 | SRC2 stride size in 64bits. |

10. Video Path

The data path of the video path module is shown in Figure 10-1 below:

This section describe A311D video path from the following aspects:

- Video Input
- Video Output
 - RDMA
 - VPP(VIU/VPP)
 - CVBS
 - HDMITX
 - MIPI-DSI

Figure 10-1 Data Path of Video Path

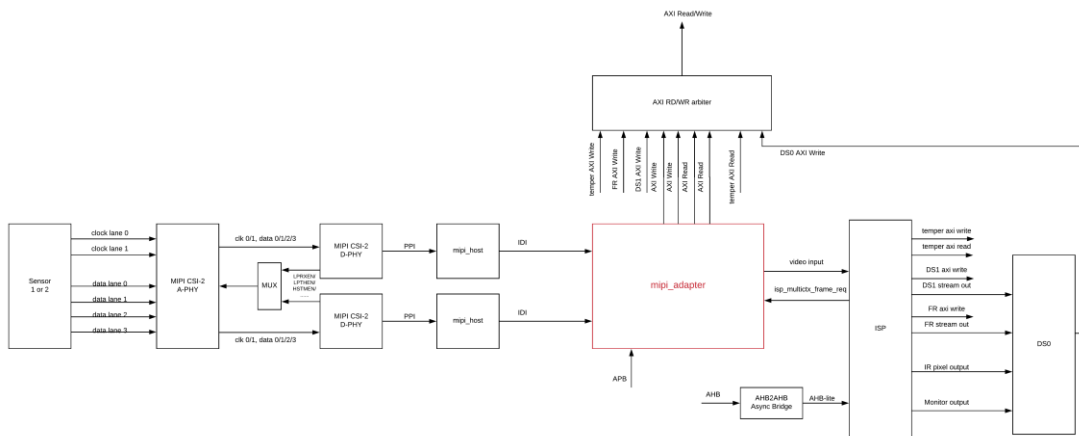

10.1 Video Input

10.1.1 Overview

This part describes the video input module of A311D, include MIPI CSI and DEMUX.

Figure below shows the MIPI CSI-ISP data path.

Figure 10-2 MIPI CSI Data Path

MIPI CSI host has the following features.

- Support up to 2 cameras, up to 8M pixel sensors, up to 60 fps
- 1 x 8Mpix x 60fps, or 1x 8Mpix x 30fps x 2exp
- 2 x 4Mpix x 60fps, or 2x 8Mpix x 30fps

Figure below shows the ISP internal data flow.

 nick@khadas.com
 2021-10-19 10:41:07

Figure 10-3 ISP Data Path

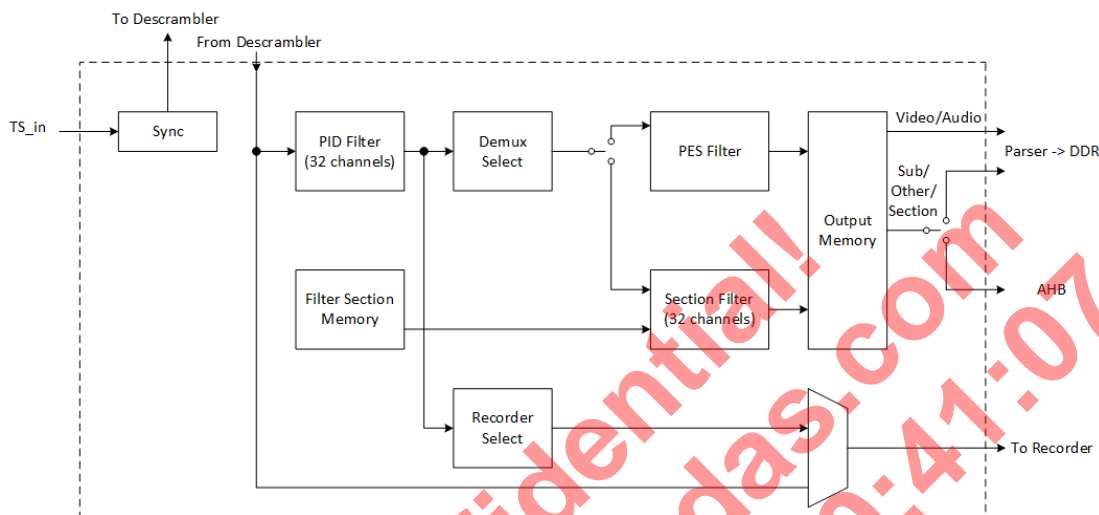

ISP features are listed below:

- Supports HDR sensor decompaning/ Dynamic Defect Pixel Correction/ Green channel equalization/ EW image flip
- Supports multipixel input
- Supports 3A(AE/AWB/AF)
- Supports Spatial/Temporal/Color Noise reduction
- Supports Static White balance
- Supports Lens shading correction
- Supports Demosaic
- Supports Chromatic aberration/purple Fringing correction
- Supports linear matrix color correction
- Supports Gamma correction

- Supports RGB sharpening
- Supports max resolution of 3840*2160@60fps

A311D uses DEMUX to handle input video signals, and store the demuxed signal in DDR, which can be read directly.

Demux submodule of A311D is designed for connecting to external digital TV tuner/demodular and demux the input signal. It decomposes the input signal from TS/DDR into video signal, audio signal, and clock signal, the video signal will be first written in to DDR, then decoded by the video decoder(VDEC). Below shows the diagram of Demux submodule.

A311D intergrades 3 demux controllers, with the following features:

- Supports PID filter up to 32 channels
- Supports session filter up to 32 channels
- Supports up to 96 channels filter when use 3 demux as one group
- Supports AES/DES/DVB-CSA 1.0 crypto
- Supports inputs from both external TS inputs (serial or parallel, depending on pinmux) and DDR memory (file playback path)
- Supports input loopback to TS-out pins
- Supports separate selection for playback and recorder

10.1.2 Register Description

10.1.2.1 MIPI CSI Registers

Below are MIPI analog PHY registers.

hi_csi_phy_cntl0 0xFF63C34C

| Bit(s) | R/W | Name | Description |
|--------|-----|------|---|
| 31:28 | | | lane 4 skew |
| 27 | | | HS skew adjust enable |
| 26 | | | HS CML resistor selection control, 1'b0: for larger than 1Gbps. |
| 25 | | | csi sync block reset signal, 1'b1: enable , 1'b0: reset |

| Bit(s) | R/W | Name | Description |
|--------|-----|------|--|
| 24 | | | 1'b1: enable BG/regulator power up control |
| 23:20 | | | low level reference voltage control in low power mode with one hot code |
| 19:16 | | | highlevel reference voltage control in low power mode with one hot code |
| 15:12 | | | lane 5 skew |
| 11 | | | low power mode bias current generation method |
| 10:7 | | | RX term resistor trimming control with binary code |
| 6 | | | lane high speed and low power mode bias current generation method |
| 5:4 | | | low power mode RX receiver bias current control |
| 3:1 | | | high speed mode RX receiver bias current control |

Below are MIPI digital PHY registers. For PHY0, the base address is ff650000, for PHY1, the base address is ff652000. The final address of each register is calculated as: final address = base address + offset*4.

MIPI_PHY_CTRL 0x00

| Bit(s) | R/W | Name | Description |
|------------|-----|------|---|
| 31 | | | soft reset. set 1 will reset the MIPI phy cil_scnn and cil_sfen modules. set 0 will release the reset. it's level signal. |
| 20 | | | if set, all analog control signals will directly from the related register bit |
| 19:18 | | | mipi hs clock to pad selection. //2'b00 : no output. //2'b01 : output /2 clock. //2'b10 : output /4 clock. //2'b11 : output /8 clock. |
| {22,17:15} | | | mipi analog signal to pad selection. //3'b000: no output. |

| Bit(s) | R/W | Name | Description |
|--------|-----|------|---|
| | | | //3'b001: clock lane. //3'b010: data lane 0. //3'b011: data lane 1. //3'b100: data lane 2. //3'b101: data lane 3. |
| 13 | | | ddr to reg. enable this bit the 8 interface DFFs result will be latch to // MIPI_PHY_DDR_STS registers. |
| 12 | | | enable this bit : all analog output signal will be latched to MIPI_PHY_ANA_STS registers. |
| 11 | | | Reserved |
| 10 | | | force analog MBIAS enable. |
| 9:5 | | | mipi_chpu to analog. |
| 4 | | | shut down digital clock lane. |
| 3 | | | Shut down digital data lane 3. |
| 2 | | | Shut down digital data lane 2. |
| 1 | | | Shut down digital data lane 1. |
| 0 | | | Shut down digital data lane 0. |

MIPI_PHY_CLK_LANE_CTRL 0x01

| Bit(s) | R/W | Name | Description |
|--------|-----|------|---|
| 11 | | | force clock lane TH check enable. |
| 10 | | | force clock lane LP enable. |
| 9 | | | force clock lane HS RECEIVER enable this signal is not used by analog. |
| 8 | | | force clock lane terminator enable |
| 7 | | | if set, will dislabe clock lane LPEN if clock lane is in HS mode. // if not set, the LPEN is always enabled until in ULPS state. |
| 6 | | | force clock TCLK_ZERO check when in clock lane HS mode. |
| 5:3 | | | TCLK_ZERO timing check. check with the hs clock counter. // 000: hs clock itself. // 001: hs clock /2 // 010: hs clock /4 // 011: hs clock /8 // 100: hs clock /16 |
| 2 | | | Shut down digital data lane 2. |

| Bit(s) | R/W | Name | Description |
|--------|-----|------|------------------------------------|
| 1 | | | force clock lane come out of ulps |
| 0 | | | force clock lane enter ULPS state. |

MIPI_PHY_DATA_LANE_CTRL 0x02

| Bit(s) | R/W | Name | Description |
|--------|-----|------|---|
| 31 | | | soft reset. set 1 will reset the MIPI phy cil_scnn and cil_sfen modules. set 0 will release the reset. it's level signal. |
| 19:18 | | | mipi hs clock to pad selection. //2'b00 : no output. //2'b01 : output /2 clock. //2'b10 : output /4 clock. //2'b11 : output /8 clock. |
| 15 | | | force data lane 3 THEN enable. |
| 14 | | | force data lane 3 LP receiver enable. |
| 13 | | | force data lane 3 HS receiver enable. |
| 12 | | | force data lane 3 terminator enable. |
| 11 | | | force data lane 2 THEN enable. |
| 10 | | | force data lane 2 LP receiver enable. |
| 9 | | | force data lane 2 HS receiver enable. |
| 8 | | | force data lane 2 terminator enable. |
| 7 | | | force data lane 1 THEN enable. |
| 6 | | | force data lane 1 LP receiver enable. |

|--------|-----|------|---|
| 23:12 | R/O | | LANE3. the count of input byte which equals 0xAA in the window for phase 13 |
| 11:0 | R/O | | LANE3. the count of input byte which equals 0xAA in the window for phase 12 |

MIPI_PHY_DESKEW_L3_AA_PHSFE

| Bit(s) | R/W | Name | Description |
|--------|-----|------|---|
| 23:12 | R/O | | LANE3. the count of input byte which equals 0xAA in the window for phase 15 |
| 11:0 | R/O | | LANE3. the count of input byte which equals 0xAA in the window for phase 14 |

MIPI_PHY_DESKEW_PHS_SEL

| Bit(s) | R/W | Name | Description |
|--------|-----|------|--|
| 15:12 | R/O | | lane3, analog phase select by hardware |
| 11:8 | R/O | | lane2, analog phase select by hardware |
| 7:4 | R/O | | lane1, analog phase select by hardware |
| 3:0 | R/O | | lane0, analog phase select by hardware |

MIPI_PHY_MUX_CTRL0

| Bit(s) | R/W | Name | Description |
|--------|-----|------|---|
| 17:16 | | | CK lane, 2'b00: select analog CK0, 2'b01: select analog CK1. 2'b10/11: input 0 |
| 14:12 | | | SFEN0 input source. 3'b000: select analog data lane0, 3'b001: select analog data lane1. 3'b010: select analog data lane2. 3'b011: select analog data lane3. else, input 0 |
| 11:8 | | | SFEN1 input source. 3'b000: select analog data lane0, 3'b001: select analog data lane1. 3'b010: select analog data lane2. 3'b011: select analog data lane3. else, input 0 |
| 7:4 | | | SFEN2 input source. 3'b000: select analog data lane0, 3'b001: select analog data lane1. 3'b010: select analog data lane2. 3'b011: select analog data lane3. else, input 0 |
| 3:0 | | | SFEN3 input source. 3'b000: select analog data lane0, 3'b001: select analog data lane1. 3'b010: select analog data lane2. 3'b011: select analog data lane3. else, input 0 |

MIPI_PHY_MUX_CTRL1

| Bit(s) | R/W | Name | Description |
|--------|-----|------|---|
| 17 | | | Analog CK1 control signal input source: 1'b0: from D-PHY SCNN. 1'b1: input 0. |
| 16 | | | Analog CK0 control signal input source: 1'b0: from D-PHY SCNN. 1'b1: input 0. |
| 14:12 | | | Analog data lane 0 control signal input source: 3'b000: from SFEN0, 3'b001: from SFEN1, 3'b010: from SFEN2, 3'b011: from SFEN3. else input 0. |
| 11:8 | | | Analog data lane 1 control signal input source: 3'b000: from SFEN0, 3'b001: from SFEN1, 3'b010: from SFEN2, 3'b011: from SFEN3. else input 0. |
| 7:4 | | | Analog data lane 2 control signal input source: 3'b000: from SFEN0, 3'b001: from SFEN1, 3'b010: from SFEN2, 3'b011: from SFEN3. else input 0. |
| 3:0 | | | Analog data lane 3 control signal input source: 3'b000: from SFEN0, 3'b001: from SFEN1, 3'b010: from SFEN2, 3'b011: from SFEN3. else input 0. |

MIPI_PHY_DESKEW_LEN_LANE01

| Bit(s) | R/W | Name | Description |
|--------|-----|------|---|
| 31:16 | R/O | | the deskew calibration length on lane0. |
| 15:0 | R/O | | the deskew calibration length on lane1. |

MIPI_PHY_DESKEW_LEN_LANE23

| Bit(s) | R/W | Name | Description |
|--------|-----|------|---|
| 31:16 | R/O | | the deskew calibration length on lane2. |
| 15:0 | R/O | | the deskew calibration length on lane3. |

Below are MIPI frontend based registers,

Frontend 0 base address: 0xFF654800

Frontend 1 base address: 0xFF654C00

Physical address = base address + offset * 4

CSI2_CLK_RESET

| Bit | R/W | Default | Description |
|------|-----|---------|---|
| 31:3 | R | 0 | Reserved |
| 2 | RW | 0 | clk_auto_gate_off: Enable/disable clock gating. 0=Enable auto clock gating for power saving; 1=Disable auto clock gating. |
| 1 | RW | 0 | clk_enable: To enable/disable clock to mipi_csi_adapt_frontend module. 0=Disable clock; 1=Enable clock. |
| 0 | RW | 1 | sw_reset: To reset mipi_csi_adapt_frontend module. 0=Release from reset; 1=Apply reset. |

CSI2_GEN_CTRL0

| Bit | R/W | Default | Description |
|-------|-----|---------|---|
| 31:21 | R | 0 | Reserved |
| 20:16 | RW | 0x1f | enable_packets. [16] enable_raw. 1=Enable receive Raw data; 0=Ignore Raw data. [17] enable_yuv. 1=Enable receive YUV data; 0=Ignore YUV data. [18] enable_rgb. 1=Enable receive RGB data; 0=Ignore RGB data. [19] enable_embedded. 1=Enable receive Embedded data; 0=Ignore. [20] enable_user. 1=Enable receive User-define data; 0=Ignore User-define data. |
| 15 | R | 0 | Reserved |
| 14 | RW | 0 | buffer_dds_wptr_other. 0=Reports the current ddr_wptr_other status; 1=Reports the buffered ddr_wptr_other status that was buffered at Frame_Start. |
| 13 | RW | 0 | dds_64byte. HW uses it to calculate stride for Embedded or User-Defined address increment per line-end. |

| Bit | R/W | Default | Description |
|-----|-----|---------|---|
| | | | 0=DDR is most efficient when address is 16-byte aligned; 1=DDR is most efficient when address is 64-byte aligned. |
| 12 | RW | 0 | ddr_wdone_mode. 0=After FrameEnd, assert interrupt when all previous writes are completed; 1=After (x_end_mem, y_end_mem) pixel are written to DDR, assert interrupt. However if somehow due to error, e.g. less lines are received, so that (x_end_mem, y_end_mem) never happens, then the interrupt will behave the same way as if cfg_ddr_wdone_mode=0 -- assert interrupt after FrameEnd, when all previous writes are completed. |
| 11 | RW | 0 | buffer_pic_size. Applicable only to direct path. 0=For active video size status, use non-buffered/instantaneous line/pixel count; 1=For active video size status, use line/pixel count that are buffered at end of field. |
| 10 | RW | 0 | use_null_packet. 0=Ignore Null packet; 1=Regard Null packet as one line. |
| 9 | RW | 0 | inv_field. Applicable only to interlace video to direct path. 0=first field is odd; 1=first field is even. |
| 8 | RW | 0 | interlace_en. Applicable only to direct path. 0=Progressive; 1=Interlace. |
| 7 | W | 0 | ddr_pingpong_init_set. Always read 0. Set to 1 when need to load ddr_pingpong_init_val into effect. |
| 6 | RW | 0 | ddr_pingpong_init_val. Only valid when ddr_pingpong_init_set=1. 0=Very 1st frame use start_addr; 1=Very 1st frame use start_addr_alt. |
| 5 | RW | 0 | ddr_pingpong_en. 0=DDR update with a new start_addr at every Frame_Start; 1=DDR set a pair of start_addr and start_addr_alt at INIT, and then DDR pointer will be ping-ponged at every Frame_Start. |
| 4 | RW | 0 | all_to_mem. 0=Depends on data type, some type might go to direct path, some might go to memory; 1=All data will go to memory, regardless of data type. |
| 3:0 | RW | 0 | virtual_channel_en: Enable one or more virtual channels at input. Bit[0] 1=Enable virtual channel 0, 0=Disable virtual channel 0; Bit[1] 1=Enable virtual channel 1, 0=Disable virtual channel 1; Bit[2] 1=Enable virtual channel 2, 0=Disable virtual channel 2; Bit[3] 1=Enable virtual channel 3, 0=Disable virtual channel 3; |

CSI2_GEN_CTRL1

| Bit | R/W | Default | Description |
|------|-----|---------|---|
| 31:8 | R | 0 | Reserved |
| 7:6 | RW | 3 | din_byte3_sel: Re-map the received 32-bit data's byte3. 0=Use input data's byte0 as actual byte3; 1=Use input data's byte1 as actual byte3; 2=Use input data's byte2 as actual byte3; 3=Use input data's byte3 as actual byte3. |
| 5:4 | RW | 2 | din_byte2_sel: Re-map the received 32-bit data's byte2. 0=Use input data's byte0 as actual byte2; 1=Use input data's byte1 as actual byte2; 2=Use input data's byte2 as actual byte2; 3=Use input data's byte3 as actual byte2. |
| 3:2 | RW | 1 | din_byte1_sel: Re-map the received 32-bit data's byte1. 0=Use input data's byte0 as actual byte1; 1=Use input data's byte1 as actual byte1; 2=Use input data's byte2 as actual byte1; 3=Use input data's byte3 as actual byte1. |
| 1:0 | RW | 0 | din_byte0_sel: Re-map the received 32-bit data's byte0. 0=Use input data's byte0 as actual byte0; 1=Use input data's byte1 as actual byte0; 2=Use input data's byte2 as actual byte0; 3=Use input data's byte3 as actual byte0. |

CSI2_X_START_END_ISP

| Bit | R/W | Default | Description |
|-------|-----|---------|--|
| 31:16 | RW | 0xffff | x_end_isp. Applicable only to Raw data, direct ISP path. |
| 15:0 | RW | 0 | x_start_isp. Applicable only to Raw data, direct ISP path. |

CSI2_Y_START_END_ISP

| Bit | R/W | Default | Description |
|-------|-----|---------|--|
| 31:16 | RW | 0xffff | y_end_isp. Applicable only to Raw data, direct ISP path. |
| 15:0 | RW | 0 | y_start_isp. Applicable only to Raw data, direct ISP path. |

CSI2_X_START_END_MEM

| Bit | R/W | Default | Description |
|-------|-----|---------|--|
| 31:16 | RW | 0xffff | x_end_mem. Applicable only to Raw data, direct MEM path. |
| 15:0 | RW | 0 | x_start_mem. Applicable only to Raw data, MEM path. |

CSI2_Y_START_END_MEM

| Bit | R/W | Default | Description |
|-------|-----|---------|--|
| 31:16 | RW | 0xffff | y_end_mem. Applicable only to Raw data, direct MEM path. |
| 15:0 | RW | 0 | y_start_mem. Applicable only to Raw data, MEM path. |

CSI2_VC_MODE

| Bit | R/W | Default | Description |
|-------|-----|---------|--|
| 31:28 | RW | 0xf | hs_mem_sel_vc. The HS signal that goes to MEM path, is the logic operation of $ (HS[all_4_channel_pre_reassign] \& hs_mem_sel_vc[3:0]) $. |
| 27:24 | RW | 0xf | vs_mem_sel_vc. The VS signal that goes to MEM path, is the logic operation of $ (VS[all_4_channel_pre_reassign] \& vs_mem_sel_vc[3:0]) $. |
| 23:20 | RW | 0xf | hs_isp_sel_vc. The HS signal that goes to direct path, is the logic operation of $ (HS[all_4_channel_pre_reassign] \& hs_isp_sel_vc[3:0]) $. |
| 19:16 | RW | 0xf | vs_isp_sel_vc. The VS signal that goes to direct path, is the logic operation of $ (VS[all_4_channel_pre_reassign] \& vs_isp_sel_vc[3:0]) $. |
| 15:14 | RW | 0 | vc_mode3[3]. Applicable only to Raw data. |
| 13:12 | RW | 0 | vc_mode3[2]. Applicable only to Raw data. |
| 11:10 | RW | 0 | vc_mode3[1]. Applicable only to Raw data. |
| 9:8 | RW | 0 | vc_mode3[0]. Applicable only to Raw data. |
| 7:6 | RW | 0 | vc_to_isp. Applicable only to Raw data. After VC re-assignment (if applicable), if the input data's $VC==vc_to_isp$, then the data go to direct path, otherwise it go to MEM path. |
| 5:4 | RW | 0 | vc_val1. Applicable only to Raw data. |
| 3:2 | RW | 0 | vc_val0. Applicable only to Raw data. |
| 1:0 | RW | 0 | assign_vc_mode. Applicable only to Raw data. 0=No virtual_channel re-assign. 1=Even line's $VC=vc_val0$, Odd line's $VC=vc_val1$. 2=If the first 64-bit (Payload vc_mode2_match_mask) |

| Bit | R/W | Default | Description |
|-----|-----|---------|--|
| | | | <p>==(vc_mode2_match_to_vc vc_mode2_match_mask), this line's VC=vc_val0;</p> <p>If the first 64-bit (Payload vc_mode2_match_mask) ==(vc_mode2_match_to_ignore vc_mode2_match_mask), this line is to be ignored;</p> <p>Otherwise this line's VC=vc_val1.</p> <p>3=Reassign this line's VC to vc_mode3[VC].</p> |

CSI2_VC_MODE2_MATCH_MASK_L

| Bit | R/W | Default | Description |
|------|-----|---------|---|
| 31:0 | RW | 0 | vc_mode2_match_mask[31:0]. Refer to assign_vc_mode. |

CSI2_VC_MODE2_MATCH_MASK_H

| Bit | R/W | Default | Description |
|------|-----|---------|--|
| 31:0 | RW | 0 | vc_mode2_match_mask[63:32]. Refer to assign_vc_mode. |

CSI2_VC_MODE2_MATCH_TO_VC_L

| Bit | R/W | Default | Description |
|------|-----|---------|--|
| 31:0 | RW | 0 | vc_mode2_match_to_vc[31:0]. Refer to assign_vc_mode. |

CSI2_VC_MODE2_MATCH_TO_VC_H

| Bit | R/W | Default | Description |
|------|-----|---------|---|
| 31:0 | RW | 0 | vc_mode2_match_to_vc[63:32]. Refer to assign_vc_mode. |

CSI2_VC_MODE2_MATCH_TO_IGNORE_L

| Bit | R/W | Default | Description |
|------|-----|---------|--|
| 31:0 | RW | 0 | vc_mode2_match_to_ignore[31:0]. Refer to assign_vc_mode. |

CSI2_VC_MODE2_MATCH_TO_IGNORE_H

| Bit | R/W | Default | Description |
|------|-----|---------|---|
| 31:0 | RW | 0 | vc_mode2_match_to_ignore[63:32]. Refer to assign_vc_mode. |

CSI2_DDR_START_PIX

| Bit | R/W | Default | Description |
|------|-----|---------|--|
| 31:0 | RW | 0 | DDR start address for pixel-based data (Raw/RGB/YUV). Must be 16-byte aligned, so low 4-bit will be ignored. |

CSI2_DDR_START_PIX_ALT

| Bit | R/W | Default | Description |
|------|-----|---------|--|
| 31:0 | RW | 0 | Alternative DDR start address for pixel-based data (Raw/RGB/YUV). Refer to ddr_pingpong_en. Must be 16-byte aligned, so low 4-bit will be ignored. |

CSI2_DDR_START_OTHER

| Bit | R/W | Default | Description |
|------|-----|---------|---|
| 31:0 | RW | 0 | DDR start address for non-pixel-based data (Embedded or User-defined). Must be 16-byte aligned, so low 4-bit will be ignored. |

CSI2_DDR_START_OTHER_ALT

| Bit | R/W | Default | Description |
|------|-----|---------|---|
| 31:0 | RW | 0 | Alternative DDR start address for non-pixel-based data (Embedded or User-defined). Refer to ddr_pingpong_en. Must be 16-byte aligned, so low 4-bit will be ignored. |

CSI2_DDR_MAX_BYTES_OTHER

| Bit | R/W | Default | Description |
|------|-----|---------|---|
| 31:0 | RW | 0 | Maximum bytes allocated to DDR for storing non-pixel-based data (Embedded or User-defined). |

Note: About reading Embedded or User-defined packets from DDR

The first packet starts from CSI2_DDR_START_OTHER(_ALT).

Byte0={virtual_channel[1:0],data_type[5:0]};

Byte1=word_count[7:0];

Byte2=word_count[15:8];

The rest of the bytes are packet payload bytes, total bytes of payload is word_count, with lowest byte first, highest byte last.

SW calculates where to read the next packet, (if there is any):

$new_packet_start_addr = last_packet_start_addr + (((last_packet_word_count+3)+M-1)/M)*M$

Where M is defined by CSI2_GEN_CTRL0's bit[13] -- ddr_64byte. If cfg_ddr_64byte=0, M=16; if ddr_64byte=1, M=64.

If the new_packet_start_addr >= the value read from CSI2_DDR_WPTR_STAT_OTHER. Then there is no more packets. Do not read the content starting from new_packet_start_addr.

CSI2_DDR_WPTR_STAT_OTHER's value can be current address pointer or previous address pointer buffered by Frame_Start.

CSI2_INTERRUPT_CTRL_STAT

| Bit | R/W | Default | Description |
|-------|-----|---------|---|
| 31:21 | R | 0 | Reserved |
| 20:16 | RW | 0 | interrupt status/clear. [16] vs_rise_isp sticky status, write 1 to clear it; |

| Bit | R/W | Default | Description |
|------|-----|---------|---|
| | | | [17] vs_fall_isp sticky status, write 1 to clear it; [18] ddr_wdone sticky status, write 1 to clear it; [19] vs_rise_mem sticky status, write 1 to clear it; [20] vs_fall_mem sticky status, write 1 to clear it. |
| 15:5 | R | 0 | Reserved |
| 4:0 | RW | 0 | interrupt_sel. Enable one or more interrupts. [0]=1 to enable vs_rise_isp interrupt; [1]=1 to enable vs_fall_isp interrupt; [2]=1 to enable ddr_wdone interrupt; [3]=1 to enable vs_rise_mem interrupt; [4]=1 to enable vs_fall_mem interrupt. |

CSI2_GEN_STAT0

| Bit | R/W | Default | Description |
|-------|-----|---------|--|
| 31:10 | R | 0 | Reserved |
| 9 | R | 0 | afifo_nempty. |
| 8 | R | 0 | afifo_full. |
| 7:6 | R | 0 | Reserved |
| 5:0 | R | 0 | afifo_count. The counter of async FIFO at input. |

CSI2_ERR_STAT0

| Bit | R/W | Default | Description |
|-------|-----|---------|-----------------------|
| 31:13 | R | 0 | Reserved |
| 12 | R | 0 | err_addr_other_overfl |
| 11 | R | 0 | err_axi_overdue |
| 10 | R | 0 | err_bfifo_underfl |
| 9 | R | 0 | err_bfifo_overfl |
| 8 | R | 0 | err_axi_bresp |
| 7 | R | 0 | err_axi_bresp_extra |
| 6 | R | 0 | err_wfifo_underfl |
| 5 | R | 0 | err_wfifo_overfl |
| 4 | R | 0 | err_awfifo_underfl |
| 3 | R | 0 | err_awfifo_overfl |
| 2 | R | 0 | err_afifo_ovfl |
| 1 | R | 0 | err_wc_ovfl |
| 0 | R | 0 | err_wc_unfl |

CSI2_PIC_SIZE_STAT

| Bit | R/W | Default | Description |
|-------|-----|---------|--|
| 31:16 | R | 0 | line_count measure for direct path only. Maybe buffered or non-buffered, depends on buffer_pic_size. |
| 15:0 | R | 0 | pix_count measure for direct path only. Maybe buffered or non-buffered, depends on buffer_pic_size. |

CSI2_DDR_WPTR_STAT_PIX

| Bit | R/W | Default | Description |
|------|-----|---------|--|
| 31:0 | R | 0 | Memory pointer for pixel lines. Always current status. |

CSI2_DDR_WPTR_STAT_OTHER

| Bit | R/W | Default | Description |
|------|-----|---------|---|
| 31:0 | R | 0 | Memory pointer for non-pixel lines. Can be buffered or current status depending on buffer_dds_wptr_other. |

CSI2_STAT_MEM_0

| Bit | R/W | Default | Description |
|-------|-----|---------|---|
| 31:20 | R | 0 | Reserved |
| 19:10 | R | 0 | wfifo_count. |
| 9 | R | 0 | axi_w_state. 0=AXI_W_IDLE; 1=AXI_W_WAIT_READY |
| 8:2 | R | 0 | awfifo_cnt. |
| 1:0 | R | 0 | axi_aw_state. 0=AXI_AW_IDEL; 1= AXI_AW_WAIT_READY; 2= AXI_AW_WAIT_W. |

CSI2_STAT_MEM_1

| Bit | R/W | Default | Description |
|-------|-----|---------|--|
| 31:16 | R | 0 | aw_pending_cnt. |
| 15:0 | R | 0 | y_pos. Current line number, for RAW data only. |

CSI2_STAT_GEN_SHORT_08

| Bit | R/W | Default | Description |
|-------|-----|---------|---|
| 18 | R | 0 | General Short Packet (type=0x08) receive flag. The flag will be cleared once the register is read. 0=Not received; 1=Received new packet. |
| 17:16 | R | 0 | Virtual Channel for General Short Packet (type=0x08). |
| 15:0 | R | 0 | Received General Short Packet (type=0x08). |

CSI2_STAT_GEN_SHORT_09

| Bit | R/W | Default | Description |
|-------|-----|---------|---|
| 18 | R | 0 | General Short Packet (type=0x09) receive flag. The flag will be cleared once the register is read. 0=Not received; 1=Received new packet. |
| 17:16 | R | 0 | Virtual Channel for General Short Packet (type=0x09). |
| 15:0 | R | 0 | Received General Short Packet (type=0x09). |

CSI2_STAT_GEN_SHORT_0A

| Bit | R/W | Default | Description |
|-------|-----|---------|---|
| 18 | R | 0 | General Short Packet (type=0x0A) receive flag. The flag will be cleared once the register is read. 0=Not received; 1=Received new packet. |
| 17:16 | R | 0 | Virtual Channel for General Short Packet (type=0x0A). |
| 15:0 | R | 0 | Received General Short Packet (type=0x0A). |

CSI2_STAT_GEN_SHORT_0B

| Bit | R/W | Default | Description |
|-------|-----|---------|---|
| 18 | R | 0 | General Short Packet (type=0x0B) receive flag. The flag will be cleared once the register is read. 0=Not received; 1=Received new packet. |
| 17:16 | R | 0 | Virtual Channel for General Short Packet (type=0x0B). |
| 15:0 | R | 0 | Received General Short Packet (type=0x0B). |

CSI2_STAT_GEN_SHORT_0C

| Bit | R/W | Default | Description |
|-------|-----|---------|---|
| 18 | R | 0 | General Short Packet (type=0x0C) receive flag. The flag will be cleared once the register is read. 0=Not received; 1=Received new packet. |
| 17:16 | R | 0 | Virtual Channel for General Short Packet (type=0x0C). |
| 15:0 | R | 0 | Received General Short Packet (type=0x0C). |

CSI2_STAT_GEN_SHORT_0D

| Bit | R/W | Default | Description |
|-------|-----|---------|---|
| 18 | R | 0 | General Short Packet (type=0x0D) receive flag. The flag will be cleared once the register is read. 0=Not received; 1=Received new packet. |
| 17:16 | R | 0 | Virtual Channel for General Short Packet (type=0x0D). |
| 15:0 | R | 0 | Received General Short Packet (type=0x0D). |

CSI2_STAT_GEN_SHORT_0E

| Bit | R/W | Default | Description |
|-------|-----|---------|---|
| 18 | R | 0 | General Short Packet (type=0x0E) receive flag. The flag will be cleared once the register is read. 0=Not received; 1=Received new packet. |
| 17:16 | R | 0 | Virtual Channel for General Short Packet (type=0x0E). |
| 15:0 | R | 0 | Received General Short Packet (type=0x0E). |

CSI2_STAT_GEN_SHORT_0F

| Bit | R/W | Default | Description |
|-------|-----|---------|---|
| 18 | R | 0 | General Short Packet (type=0x0F) receive flag. The flag will be cleared once the register is read. 0=Not received; 1=Received new packet. |
| 17:16 | R | 0 | Virtual Channel for General Short Packet (type=0x0F). |
| 15:0 | R | 0 | Received General Short Packet (type=0x0F). |

Below are DDR RD registers.

base address: 0xFF655000

Physical address = base address + offset * 4

MIPI_ADAPT_DDR_RD0_CNTL0 0x00

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | RW | 0x0 | frame_rd_start start read frame data from ddr, used in single frame read scenario, this bit is self-cleared |
| 30 | RW | 0x0 | port_sel |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| | | | 0: direct path mode, data from direct path input 1: ddr mode, data from ddr |
| 29:28 | RW | 0x0 | burst_type burst type for AXI read command 0: single 1: incr2 2: incr4 3: inc8 |
| 27:26 | RW | 0x0 | reg_sample_sel By default, control register will be latched from apb clk domain to vclk domain by enable and soft_load, you can use the following signal to latch the control register too 0: at posedge of frame_rd_start 1: vsync from frontend 2: delayed vsync from frontend 3: reserved |
| 25 | RW | 0x0 | soft_load control register will be latched from apb clk domain to vclk domain at posedge of soft_load |
| 24 | RW | 0x0 | continue_mode Used in ddr mode, if this bit is high, continuous frames will be read from ddr without any software control in every vblank period 0: single frame scenario 1: multiple frame scenario |
| 23 | RW | 0x0 | dol_mode 0: single exposure mode 1: DOL mode for HDR, 2-exposure mode |
| 22 | RW | 0x0 | pingpong_mode This bit is used for frame base address control. 0: frame_base_address_0 is used 1: frame_base_address_0 and frame_base_address_1 are used alternately |
| 21 | RW | 0x0 | dol_time_out_en Enable for the timeout control in DOL mode. 0: disable 1: enable |
| 20 | RW | 0x0 | frame_wr_done_sel When frontend module has written the whole frame data to ddr, it will send a flag to ddr_rd module. This is the flag source select control. 0: flag from frontend 0 |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| | | | 1: flag from frontend 1 |
| 19 | RW | 0x0 | line_wr_done_sel When frontend module has written the whole line data to ddr, it will send a flag to ddr_rd module. This is the flag source select control. 0: flag from frontend 0 1: flag from frontend 1 |
| 18 | RW | 0x0 | dol_frame_end_en Enable ddr_rd module read the missing lines when frontend module write less lines than expectation, only used in DOL mode |
| 17 | RW | 0x0 | dol_vblank_clr_sel In DOL mode, vblank flag is set by frame write done flag from frontend module, and clear by the following signal: 0: ddr_rd has read all the lines from ddr for a frame 1: vsync from frontend module |
| 16 | RW | 0x0 | din_vs_sel Vsync source select 0:from frontend 1 1:from frontend 0 |
| 15:4 | RW | 0x0 | din_vs_dly_cnt Vsync from frontend will be delayed internally, this is the delay time setting in vck cycle |
| 3:2 | RW | 0x0 | lbuf_soft_rst_sel Line buffer 0 soft reset source select 0: reserved 1: vsync from frontend 0 2: vsync from frontend 1 3: delayed vsync |
| 0 | RW | 0x0 | Module enable for ddr_rd |

MIPI_ADAPT_DDR_RD0_CNTL1 0x01

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 28:16 | RW | 0x0 | line_number Line number in a frame,when N ,set N |
| 15:12 | RW | 0x0 | dol_line_threshold In DOL mode, ddr_rd start to read frame data from ddr when frontend module has written "dol_line_threshold" lines into ddr |
| 9:0 | RW | 0x0 | line_size Data size for a line, unit: 128bit |

MIPI_ADAPT_DDR_RD0_CNTL2 0x02

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | RW | 0x0 | frame_base_address_0 Base address 0 for frame data |

MIPI_ADAPT_DDR_RD0_CNTL3 0x03

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | RW | 0x0 | frame_base_address_1 Base address 1 for frame data, valid in pingpong mode |

MIPI_ADAPT_DDR_RD0_CNTL4 0x04

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:13 | RW | 0x0 | dol_time_out Set the IDLE period in yck cycle for frontend-ddr_rd interface to set the time out flag, valid in DOL mode |
| 12:0 | RW | 0x0 | line_threshold line number threshold for interrupt, when ddr_rd has read "line_threshold" lines, it will send out an interrupt flag |

MIPI_ADAPT_DDR_RD0_ST0 0x05

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 18 | R | 0x0 | pixel_line_valid Valid line period for direct path |
| 17:8 | R | 0x0 | lbuf_counter Valid data number in line buffer |
| 7:4 | R | 0x0 | fe_frame_wr_counter Frame numbers present in DDR for read |
| 3 | R | 0x0 | lbuf_not_full full flag for line buffer 0: full 1: not full |
| 2:0 | R | 0x0 | ddr_rd_state Internal FSM state for ddr read control |

MIPI_ADAPT_DDR_RD0_ST1 0x06

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R | 0x0 | frame_base_address_sel Indicate which base address is used for current frame 0: frame_base_address_0 1: frame_base_address_1 |
| 28:16 | R | 0x0 | v_counter Line number that has been read from ddr for a frame |
| 9:0 | R | 0x0 | line_count data number that has been read from ddr for a line |

MIPI_ADAPT_DDR_RD0_ST2 0x07

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 29 | R | 0x0 | fe_line_wr_done_mask Indicate frontend has written more lines than expectation to ddr for a frame |
| 28:16 | R | 0x0 | fe_line_wr_counter Valid Line number present in ddr, valid in DOL mode |
| 13 | R | 0x0 | dol_timeout_valid Time out flag in DOL mode |
| 12:0 | R | 0x0 | dol_frame_line_cnt Line number that frontend has written to ddr, valid in DOL mode |

MIPI_ADAPT_DDR_RD1_CNTL0 0x10

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | RW | 0x0 | frame_rd_start start read frame data from ddr, used in single frame read scenario, this bit is self-cleared |
| 30 | RW | 0x0 | port_sel 0: direct path mode, data from direct path input 1: ddr mode, data from ddr |
| 29:28 | RW | 0x0 | burst_type burst type for AXI read command 0: single 1: incr2 2: incr4 3: inc8 |
| 27:26 | RW | 0x0 | reg_sample_sel |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| | | | <p>By default, control register will be latched from apb clk domain to vclk domain by enable and soft_load, you can use the following signal to latch the control register too</p> <p>0: at posedge of frame_rd_start</p> <p>1: vsync from frontend</p> <p>2: delayed vsync from frontend</p> <p>3: reserved</p> |
| 25 | RW | 0x0 | <p>soft_load</p> <p>control register will be latched from apb clk domain to vclk domain at posedge of soft_load</p> |
| 24 | RW | 0x0 | <p>continue_mode</p> <p>Used in ddr mode, if this bit is high, continuous frames will be read from ddr without any software control in every vblank period</p> <p>0: single frame scenario</p> <p>1: multiple frame scenario</p> |
| 23 | RW | 0x0 | <p>dol_mode</p> <p>0: single exposure mode</p> <p>1: DOL mode for HDR, 2-exposure mode</p> |
| 22 | RW | 0x0 | <p>pingpong_mode</p> <p>This bit is used for frame base address control.</p> <p>0: frame_base_address_0 is used</p> <p>1: frame_base_address_0 and frame_base_address_1 are used alternately</p> |
| 21 | RW | 0x0 | <p>dol_time_out_en</p> <p>Enable for the timeout control in DOL mode.</p> <p>0: disable</p> <p>1: enable</p> |
| 20 | RW | 0x0 | <p>frame_wr_done_sel</p> <p>When frontend module has written the whole frame data to ddr, it will send a flag to ddr_rd module. This is the flag source select control.</p> <p>0: flag from frontend 0</p> <p>1: flag from frontend 1</p> |
| 19 | RW | 0x0 | <p>line_wr_done_sel</p> <p>When frontend module has written the whole line data to ddr, it will send a flag to ddr_rd module. This is the flag source select control.</p> <p>0: flag from frontend 0</p> <p>1: flag from frontend 1</p> |
| 18 | RW | 0x0 | <p>dol_frame_end_en</p> <p>Enable ddr_rd module read the missing lines when frontend module write less lines than expectation, only used in DOL mode</p> |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 17 | RW | 0x0 | dol_vblank_clr_sel In DOL mode, vblank flag is set by frame write done flag from frontend module, and clear by the following signal: 0: ddr_rd has read all the lines from ddr for a frame 1: vsync from frontend module |
| 16 | RW | 0x0 | din_vs_sel Vsync source select 0:from frontend 1 1:from frontend 0 |
| 15:4 | RW | 0x0 | din_vs_dly_cnt Vsync from frontend will be delayed internally, this is the delay time setting in vck cycle |
| 3:2 | RW | 0x0 | lbuf_soft_rst_sel Line buffer 0 soft reset source select 0: reserved 1: vsync from frontend 1 2: vsync from frontend 0 3: delayed vsync |
| 0 | RW | 0x0 | Module enable for ddr_rd |

MIPI_ADAPT_DDR_RD1_CNTL1 0x11

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 28:16 | RW | 0x0 | line_number Line number in a frame,when N ,set N |
| 15:12 | RW | 0x0 | dol_line_threshold In DOL mode, ddr_rd start to read frame data from ddr when frontend module has written "dol_line_threshold" lines into ddr |
| 9:0 | RW | 0x0 | line_size Data size for a line, unit: 128bit |

MIPI_ADAPT_DDR_RD1_CNTL2 0x12

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | RW | 0x0 | frame_base_address_0 Base address 0 for frame data |

MIPI_ADAPT_DDR_RD1_CNTL3 0x13

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | RW | 0x0 | frame_base_address_1 Base address 1 for frame data, valid in pingpong mode |

MIPI_ADAPT_DDR_RD1_CNTL4 0x14

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:13 | RW | 0x0 | dol_time_out Set the IDLE period in vck cycle for frontend-ddr_rd interface to set the time out flag, valid in DOL mode |
| 12:0 | RW | 0x0 | line_threshold line number threshold for interrupt, when ddr_rd has read "line_threshold" lines, it will send out an interrupt flag |

MIPI_ADAPT_DDR_RD1_ST0 0x15

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 18 | R | 0x0 | pixel_line_valid Valid line period for direct path |
| 17:8 | R | 0x0 | lbuf_counter Valid data number in line buffer |
| 7:4 | R | 0x0 | fe_frame_wr_counter Frame numbers present in DDR for read |
| 3 | R | 0x0 | lbuf_not_full full flag for line buffer 0: full 1: not full |
| 2:0 | R | 0x0 | ddr_rd_state Internal FSM state for ddr read control |

MIPI_ADAPT_DDR_RD1_ST1 0x16

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R | 0x0 | frame_base_address_sel Indicate which base address is used for current frame 0: frame_base_address_0 1: frame_base_address_1 |
| 28:16 | R | 0x0 | v_counter Line number that has been read from ddr for a frame |
| 9:0 | R | 0x0 | line_count data number that has been read from ddr for a line |

MIPI_ADAPT_DDR_RD1_ST2 0x17

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 29 | R | 0x0 | fe_line_wr_done_mask Indicate frontend has written more lines than expectation to ddr for a frame |
| 28:16 | R | 0x0 | fe_line_wr_counter Valid Line number present in ddr, valid in DOL mode |
| 13 | R | 0x0 | dol_timeout_valid Time out flag in DOL mode |
| 12:0 | R | 0x0 | dol_frame_line_cnt Line number that frontend has written to ddr, valid in DOL mode |

Below are pixel registers.

base address: 0xFF655000

Physical address = base address + offset * 4

MIPI_ADAPT_PIXEL0_CNTL0 0x20

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | RW | 0x0 | data_mode 0 ddr mode 1 direct mode |
| 30 | RW | 0x0 | sf_fifo_rd_size_en 0:sf_fifo_rd_size invalid,will auto calculate fifo_rd_size by data_type and pixel_num 1:sf_fifo_rd_size valid,will use sf_fifo_rd_size as fifo_rd_size |
| 25:16 | RW | 0x0 | sf_fifo_rd_size Fifo rd data number from fifo for each line configured by software,valid when sf_fifo_rd_size_en = 1 The number of data should be N x 128bit |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 15:13 | RW | 0x0 | data_type Input video data format 1 RAW6 2 RAW7 3 RAW8 4 RAW10 5 RAW12 6 RAW14 |
| 12:0 | RW | 0x0 | pixel_num Pixel number in a line (Set N when N pixel per line) |

MIPI_ADAPT_PIXEL0_CNTL1 0x21

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | RW | 0x0 | start_en Start enable, write 1 to start , will auto clear to 0 |
| 30:16 | RW | 0x0 | frame_sync_dely_time Frame_sync delay time, N x vclk cycles, valid when frame_sync_dely_en = 1 |
| 15 | RW | 0x0 | frame_sync_dely_en Can use frame_sync from frontend after delay some cycles of vclk 0 Frame_sync delay disable 1 Frame_sync delay enable |
| 12 | RW | 0x0 | frame_sync_sel 0 frame_sync from frontend0 1 frame_sync from frontend1 |
| 11 | RW | 0x0 | frame_sync_en Can use frame_sync from frontend to soft reset pixel model 0 frame_sync disable 1 frame_sync enable, will sync and reload register when frame_sync valid |
| 9:0 | RW | 0x0 | fifo_threshold pixel will start read fifo after fifo depth > threshold |

MIPI_ADAPT_PIXEL1_CNTL0 0x22

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | RW | 0x0 | data_mode 0 ddr mode 1 direct mode |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 30 | RW | 0x0 | sf_fifo_rd_size_en 0:sf_fifo_rd_size invalid,will auto calculate fifo_rd_size by data_type and pixel_num 1:sf_fifo_rd_size valid,will use sf_fifo_rd_size as fifo_rd_size |
| 25:16 | RW | 0x0 | sf_fifo_rd_size Fifo rd data number from fifo for each line configured by software,valid when sf_fifo_rd_size_en = 1 The number of data should be N x 128bit |
| 15:13 | RW | 0x0 | data_type Input video data format 1 RAW6 2 RAW7 3 RAW8 4 RAW10 5 RAW12 6 RAW14 |
| 12:0 | RW | 0x0 | pixel_num Pixel number in a line (Set N when N pixel per line) |

MIPI_ADAPT_PIXEL1_CNTL1 0x23

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | RW | 0x0 | start_en Start enable,write 1 to start ,will auto clear to 0 |
| 30:16 | RW | 0x0 | frame_sync_dely_time Frame_sync delay time,N x vclk cycles,valid when frame_sync_dely_en = 1 |
| 15 | RW | 0x0 | frame_sync_dely_en Can use frame_sync from frontend after delay some cycles of vclk 0 Frame_sync delay disable 1 Frame_sync delay enable |
| 12 | RW | 0x0 | frame_sync_sel 0 frame_sync from frontend0 1 frame_sync from frontend1 |
| 11 | RW | 0x0 | frame_sync_en Can use frame_sync from frontend to soft reset pixel model 0 frame_sync disable 1 frame_sych enable,will sync and reload register when frame_sync valid |
| 9:0 | RW | 0x0 | fifo_threshold pixel will start read fifo after fifo depth > threshold |

Below are Alignment registers.

base address: 0xFF655000

Physical address = base address + offset * 4

MIPI_ADAPT_ALIG_CNTL0 0x30

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 28:16 | RW | 0x0 | h_num_a For camera A,H total in a line,when N,set N |
| 12:0 | RW | 0x0 | v_num_a For camera A,V total in a frame,when N,set N |

MIPI_ADAPT_ALIG_CNTL1 0x31

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 28:16 | RW | 0x0 | hps_num_a For camera A,Start pixel in a line,when N,set N |
| 12:0 | RW | 0x0 | hpe_num_a For camera A,End pixel in a line,when N,set N+1 |

MIPI_ADAPT_ALIG_CNTL2 0x32

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 28:16 | RW | 0x0 | vps_num_a For camera A,Start line in a frame,when N,set N |
| 12:0 | RW | 0x0 | vpe_num_a For camera A,End line in a frame,when N,set N+1 |

MIPI_ADAPT_ALIG_CNTL3 0x33

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 28:16 | RW | 0x0 | h_num_b For camera B,H total in a line,when N,set N |
| 12:0 | RW | 0x0 | v_num_b For camera B,V total in a frame,when N,set N |

MIPI_ADAPT_ALIG_CNTL4 0x34

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 28:16 | RW | 0x0 | hps_num_b For camera B,Start pixel in a line,when N,set N |
| 12:0 | RW | 0x0 | hpe_num_b For camera B,End pixel in a line,when N,set N+1 |

MIPI_ADAPT_ALIG_CNTL5 0x35

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 28:16 | RW | 0x0 | vps_num_b For camera B,Start line in a frame,when N,set N |
| 12:0 | RW | 0x0 | vpe_num_b For camera B,End line in a frame,when N,set N+1 |

MIPI_ADAPT_ALIG_CNTL6 0x36

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 29:16 | RW | 0x0 | fill_data Fill data value when less line or less pixel in direct path,will use this value to fill the missing pixel |
| 15 | RW | 0x0 | vdata3_en 0:vdata3 disable 1:vdata3 enable |
| 14 | RW | 0x0 | vdata2_en |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| | | | 0:vdata2 disable 1:vdata2 enable |
| 13 | RW | 0x0 | vdata1_en 0:vdata1 disable 1:vdata1 enable |
| 12 | RW | 0x0 | vdata0_en 0:vdata0 disable 1:vdata0 enable |
| 11 | RW | 0x0 | vdata3_sel When camera_mode = 1,this bit replaced by camera_sel When camera_mode = 0,vdata3 select 0:lane0 data 1:lane1 data |
| 10 | RW | 0x0 | vdata2_sel When camera_mode = 1,this bit replaced by camera_sel When camera_mode = 0,vdata2 select 0:lane0 data 1:lane1 data |
| 9 | RW | 0x0 | vdata1_sel When camera_mode = 1,this bit replaced by camera_sel When camera_mode = 0,vdata1 select 0:lane0 data 1:lane1 data |
| 8 | RW | 0x0 | vdata0_sel When camera_mode = 1,this bit replaced by camera_sel When camera_mode = 0,vdata0 select 0:lane0 data 1:lane1 data |
| 5 | RW | 0x0 | pix_datamode_1 Pixel 1 data mode 0 ddr mode 1 direct mode |
| 4 | RW | 0x0 | pix_datamode_0 Pixel 0 data mode 0 ddr mode 1 direct mode |
| 3 | RW | 0x0 | lane1_sel |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| | | | Lane1 input source select 0 pixel 0 1 pixel 1 |
| 2 | RW | 0x0 | lane1_en 0 lane1 disable 1 lane1 enable When camera_mode =1,camera_sel should set to 1 to make lane1 enable |
| 1 | RW | 0x0 | lane0_sel Lane0 input source select 0 pixel 0 1 pixel 1 |
| 0 | RW | 0x0 | lane0_en 0 lane0 disable 1 lane0 enable When camera_mode =1,camera_sel should set to 0 to make lane0 enable |

MIPI_ADAPT_ALIG_CNTL7 0x37

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:16 | RW | 0x0 | inc_mask_timeout When inc_mask_timeout_en = 1,those bits are valid will be timeout after when no valid data with direct mode in vvalid period after N x vclk cycles |
| 15 | RW | 0x0 | inc_mask_timeout_en 0:in_mask timeout disable 1:in_mask timeout enable |
| 13 | RW | 0x0 | frame_sync_en Can use frame_sync from frontend to do soft reset for this model,and can reset the start line and start pixel to certain line and certain pixel 0 frame_sync disable 1 frame_sync enable |
| 13 | RW | 0x0 | frame_sync_sel frame_sync source select 0 frame_sync from frontend0 1 frame_sync from frontend1 |
| 12:0 | RW | 0x0 | frame_start_line Will valid ,When frame_sync_en =1 Can start at N line of frame at the time of frame_sync |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| | | | Should not greater than the vps_num(first valid line position) |

MIPI_ADAPT_ALIG_CNTL8 0x38

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | RW | 0x0 | start_en Aligment start enable,will auto clear to 0 |
| 28:16 | RW | 0x0 | frame_start_pixel Will valid ,When frame_sync_en =1 Can start at N pixel of frame_start_line at the time of frame_sync Should be less than the h_num(h total) |
| 13 | RW | 0x0 | no_frame_sv_sync_en When frame_sync_en =0,can start frame at frame_start_line and frame_start_pixel after counter equal h_num and v_num |
| 12 | RW | 0x0 | exc_mask_dis When in direct mode pixel or line is received is more than setting,and the inc_mask_timeout_en is valid,will treat it as pixel or line exceed,can select stop counter or not stop counter until received the lineend/frameend information. 0 hold counter when pixel or line exceed 1 not hold counter when pixel or line exceed |
| 11 | RW | 0x0 | mult_camera_req_sf_en 0 mult_camera_req_sf disable 1 mult_camera_req_sf enable |
| 10 | RW | 0x0 | mult_camera_req_sf ISP in mult camera mode will output isp_multictx_frame_req, we should start transmit when isp_multictx_frame_req.But we can use this register instant of isp_multictx_frame_req when mult_camera_req_sf_en = 1 |
| 9 | RW | 0x0 | camera_mode 0 single camera mode 1 dual camera mode |
| 8 | RW | 0x0 | camera_sel When camera_mode =1,camera_sel should set to 1 to make lane1 enable When camera_mode =1,camera_sel should set to 0 to make lane0 enable 0 select camera A 1 select camera B |
| 5 | RW | 0x0 | frame_continue 0 disable continue mode,should set start_en each frame 1 enable continue mode,will auto start the next frame transmit |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 4 | RW | 0x0 | fr_vdata_rrdy_dis fr_vdata_rrdy is the ready single from swrmif,will valid when swrmif can not receive more data from isp.When fr_vdata_rrdy is valid,alignment will desert cke to hold ISP. 0 fr_vdata_rrdy valid 1 fr_vdat_rrdy invalid |
| 1:0 | RW | 0x0 | frame_vs_sel Alignment will send out a frame_vs single to swrmif for sync. frame_vs to swrmif select 0 frame_sync 1 frame start by auto count 2 frame_sync before delay 3 frame end by auto count |

MIPI_ADAPT_ALIG_CNTL9 0x39

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | RW | 0x0 | frame_sync_dely_en Can use frame_sync from frontend after delay some cycles of vclk 0 Frame_sync delay disable 1 Frame_sync delay enable |
| 30:16 | RW | 0x0 | frame_sync_dely_time Frame_sync delay time,N x vclk cycles,valid when frame_sync_dely_en = 1 |

Below are MISC registers.

base address: 0xFF655000

Physical address = base address + offset * 4

MIPI_OTHER_CNTL0 0x40

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:28 | RW | 0x0 | reg_soft_rst Can use register to soft reset those modules: bit 3 : lbuf0,lbuf1,pixel0,pixel1,aligment bit 2 : aligment bit 1 : ddr_rd1,lbuf1,pixel1 bit 0 : ddr_rd0,lbuf0,pixel0 |
| 17 | RW | 0x0 | reg_lbuf1_clk_on 0 :lbuf1 clock gate disable 1 :lbuf1 clock gate enable |
| 16 | RW | 0x0 | reg_lbuf0_clk_on |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| | | | 0 :lbuf0 clock gate disable 1 :lbuf0 clock gate enable |
| 15:14 | RW | 0x0 | reg_gclk_ctrl_mipi_axi_arb for axi arb |
| 12:4 | RW | 0x0 | reg_ugt_cntl Axi arbit ugt can set by software Bit8 :sc_wrmif axi write Bit7 :isp temper axi write Bit6 :isp ds axi write Bit5 :isp fr axi write Bit4 :frontend1 axi write Bit3 :frontend0 axi write Bit2 :isp temper axi read Bit1 :ddr_rd1 axi read Bit0 :ddr_rd0 axi read |

MIPI_OTHER_CNTL1 0x41

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | RW | 0x0 | cmd_mask_en ddr_rd0 axi read cmd bus can be hold intermittent by this bit to reduce the bandwidth loading 0 : disable 1 : enable |
| 15:8 | RW | 0x0 | cmd_number When cmd_mask_en = 1,will hold ddr_rd0 axi read cmd bus after send those number of read cmd |
| 7:0 | RW | 0x0 | cmd_block_cycle When cmd_mask_en =1,after the number of read cmd equal cmd_number will hold the cmd bus for cmd_block_cycle cycles of vclk. |

MIPI_OTHER_CNTL2 0x42

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | RW | 0x0 | cmd_mask_en ddr_rd1 axi read cmd bus can be hold intermittent by this bit to reduce the bandwidth loading 2 : disable 3 : enable |
| 15:8 | RW | 0x0 | cmd_number |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| | | | When cmd_mask_en = 1, will hold ddr_rd0 axi read cmd bus after send those number of read cmd |
| 7:0 | RW | 0x0 | cmd_block_cycle When cmd_mask_en =1, after the number of read cmd equal cmd_number will hold the cmd bus for cmd_block_cycle cycles of vclk. |

MIPI_OTHER_CNTL3 0x43

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | RW | 0x0 | noblock_en Isp ds axi wrbus can not wait bresp when this bit set 0: disable 1: enable |
| 30 | RW | 0x0 | soft_rst ds_noblock soft_rst, write 1 to reset ds_noblock module |
| 29 | RW | 0x0 | cmd_cnt_clr Set cmd_cnt to 0, cmd_cnt used to count the number of cmd have not receive bresp from bus |
| 18:16 | RW | 0x0 | frame_sync_sel Check cmd_cnt equal 0 at frame_sync 5 : isp_vvalid_neg 4 : isp_vvalid_pos 3 : frame_vs (from alignment) 2 : frontend1_vs 1 : frontend0_vs 0 : disable |
| 15 | RW | 0x0 | frame_sync_dely_en 0 : frame_sync delay disable 1 : frame_sync delay enable |
| 14:0 | RW | 0x0 | frame_sync_dely_time frame_sync delay time, N x vclk cycles, valid when frame_sync_dely_en = 1 |

MIPI_OTHER_CNTL4 0x44

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | RW | 0x0 | noblock_en Isp fr axi wrbus can not wait bresp when this bit set 0: disable 1: enable |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 30 | RW | 0x0 | soft_rst fr_noblock soft_rst,write 1 to reset fr_noblock module |
| 29 | RW | 0x0 | cmd_cnt_clr Set cmd_cnt to 0,cmd_cnt used to count the number of cmd have not receive bresp from bus |
| 18:16 | RW | 0x0 | frame_sync_sel Check cmd_cnt equal 0 at frame_sync 5 : isp_vvalid_neg 5 : isp_vvalid_pos 4 : frame_vs (from alignment) 3 : frontend1_vs 2 : frontend0_vs 0 : disable |
| 15 | RW | 0x0 | frame_sync_dely_en 0 : frame_sync delay disable 1 : frame_sync delay enable |
| 14:0 | RW | 0x0 | frame_sync_dely_time frame_sync delay time,N x vclk cycles,valid when frame_sync_dely_en = 1 |

MIPI_OTHER_ST0 0x4a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R | 0x0 | cmd_cnt in ds axi wrbus noblock module |

MIPI_OTHER_ST1 0x4b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R | 0x0 | cmd_cnt in fr axi wrbus noblock module |

DDR_RD0_LBUF_STATUS 0x50

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 14 | R | 0x0 | ddr_rd_0_lbuf_overflow |
| 13 | R | 0x0 | ddr_rd_0_lbuf_underflow |
| 12 | R | 0x0 | ddr_rd_0_lbuf_full |
| 11 | R | 0x0 | ddr_rd_0_lbuf_halffull |
| 10 | R | 0x0 | ddr_rd_0_lbuf_empty |
| 9:0 | R | 0x0 | ddr_rd_0_lbuf_count |

DDR_RD1_LBUF_STATUS 0x51

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 14 | R | 0x0 | ddr_rd_0_lbuf_overflow |
| 13 | R | 0x0 | ddr_rd_0_lbuf_underflow |
| 12 | R | 0x0 | ddr_rd_0_lbuf_full |
| 11 | R | 0x0 | ddr_rd_0_lbuf_halffull |
| 10 | R | 0x0 | ddr_rd_0_lbuf_empty |
| 9:0 | R | 0x0 | ddr_rd_0_lbuf_count |

MIPI_ADAPT_IRQ_MASK0 0x60

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 30:0 | RW | 0x0 | Irq_mask, set 1 to each bit to enable the pending in MIPI_ADAPT_IRQ_PENDING0 as interrupt |

MIPI_ADAPT_IRQ_PENDING0 0x61

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 30 | RW | 0x0 | ddr_rd1_dol_more_line_pending When ddr_rd in dol mode and with ddr mode, will set this pending when ddr_rd received more lines than the setting for ddr_rd1 |
| 29 | RW | 0x0 | ddr_rd1_dol_less_line_pending When ddr_rd in dol mode and with ddr mode, will set this pending at 2 cases: 1 ddr_rd received the next frame_vsync and the number of lines is less than the setting for ddr_rd1 2 when set dol_time_out_en=1, and ddr_rd did not received valid line in the setting time period for ddr_rd1 |
| 28 | RW | 0x0 | ddr_rd_1_lbuf_wr_ov_pending When lbuf1 overflow will set this pending |
| 27 | RW | 0x0 | ddr_rd_0_lbuf_wr_ov_pending When lbuf0 overflow will set this pending |
| 26 | RW | 0x0 | fe_1_pending[4]:frame_end_mem frame end for ddr mode data in frontend1 |
| 25 | RW | 0x0 | fe_1_pending[3]:frame_start_mem frame start for ddr mode data in frontend1 |
| 24 | RW | 0x0 | fe_1_pending[2]:ddr_wdone frame ddr data have been write to ddr by frontend1 |
| 23 | RW | 0x0 | fe_1_pending[1]:frame_end_isp frame end for direct mode data in frontend1 |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 22 | RW | 0x0 | fe_1_pending[0]:frame_start_isp frame start for direct mode data in frontend1 |
| 21 | RW | 0x0 | fe_0_pending[4]:frame_end_mem frame end for ddr mode data in frontend0 |
| 20 | RW | 0x0 | fe_0_pending[3]:frame_start_mem frame start for ddr mode data in frontend0 |
| 19 | RW | 0x0 | fe_0_pending[2]:ddr_wdone frame ddr data have been write to ddr by frontend0 |
| 18 | RW | 0x0 | fe_0_pending[1]:frame_end_isp frame end for direct mode data in frontend0 |
| 17 | RW | 0x0 | fe_0_pending[0]:frame_start_isp frame start for direct mode data in frontend0 |
| 16 | RW | 0x0 | ddr_rd0_dol_more_line_pending When ddr_rd in dol mode and with ddr mode,will set this pending when ddr_rd received more lines than the setting fro ddr_rd0 |
| 15 | RW | 0x0 | ddr_rd0_dol_less_line_pending When ddr_rd in dol mode and with ddr mode,will set this pending at 2 cases: 1 ddr_rd received the next frame_vsync and the number of lines is less than the setting for ddr_rd0 2 when set dol_time_out_en=1,and ddr_rd did not received valid line in the setting time period for ddr_rd0 |
| 14 | RW | 0x0 | DS0 interrupt pending |
| 13 | RW | 0x0 | ddr_rd0_frame_rd_done_pending When ddr_rd0 read over one frame with setting in ddr_rd0,will set this pending |
| 12 | RW | 0x0 | ddr_rd0_frame_v_count_pending When ddr_rd0 has read "line_threshold" lines,will set this pending |
| 11 | RW | 0x0 | ddr_rd1_frame_rd_done_pending When ddr_rd1 read over one frame with setting in ddr_rd1,will set this pending |
| 10 | RW | 0x0 | ddr_rd1_frame_v_count_pending When ddr_rd1 has read "line_threshold" lines,will set this pending |
| 9 | RW | 0x0 | alig_data_less_timeout_pending When inc_mask_timeout_en is valid, will set this pending when no valid date from pixel last inc_mask_timeout x vclk cycles |
| 8 | RW | 0x0 | alig_frame_end_pending |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| | | | When alignment send out the entire frame with camera setting in alignment (both valid period and blank period),will set this pending |
| 7 | RW | 0x0 | alig_lane0_pixel_less_pending When lane0 is in direct mode,will set this pending when the number of pixel in a line from source is less than camera setting in alignment |
| 6 | RW | 0x0 | alig_lane0_pixel_exc_pending When lane0 is in direct mode,will set this pending when the number of pixel in a line from source is more than camera setting in alignment |
| 5 | RW | 0x0 | alig_lane0_line_less_pending When lane0 is in direct mode,and inc_mask_timeout_en is valid, will set this pending when the number of line from source is less than camera setting in alignment |
| 4 | RW | 0x0 | alig_lane0_line_exc_pending When lane0 is in direct mode,will set this pending when the number of line from source is more than camera setting in alignment |
| 3 | RW | 0x0 | alig_lane1_pixel_less_pending When lane1 is in direct mode,will set this pending when the number of pixel in a line from source is less than camera setting in alignment |
| 2 | RW | 0x0 | alig_lane1_pixel_exc_pending When lane1 is in direct mode,will set this pending when the number of pixel in a line from source is more than camera setting in alignment |
| 1 | RW | 0x0 | alig_lane1_line_less_pending When lane1 is in direct mode,and inc_mask_timeout_en is valid, will set this pending when the number of line from source is less than camera setting in alignment |
| 0 | RW | 0x0 | alig_lane1_line_exc_pending When lane1 is in direct mode,will set this pending when the number of line from source is more than camera setting in alignment |

MIPI_ADAPT_IRQ_MASK1 0x62

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 5:0 | RW | 0x0 | Irq_mask,set 1 to each bit to enable the pending in MIPI_ADAPT_IRQ_PENDING1 as interrupt |

MIPI_ADAPT_IRQ_PENDING1 0x63

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 5 | RW | 0x0 | axi_ds_wbus_noblock_pending When noblock enable for ds axi wbus and frame_sync_en valid in the noblock module,will set this pending at frame_sync if the cmd number from ISP not equal the bresp number from NIC |
| 4 | RW | 0x0 | axi_fr_wbus_noblock_pending |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| | | | When noblock enable for fr axi wbus and frame_sync_en valid in the noblock module,will set this pending at frame_sync if the cmd number from ISP not equal the bresp number from NIC |
| 3 | RW | 0x0 | ddr_rd0_dol_hang_pending When ddr_rd in dol mode,will set this pending when the next frame_sync come before ddr_rd send out all valid pixel |
| 2 | RW | 0x0 | ddr_rd1_dol_hang_pending When ddr_rd in dol mode,will set this pending when the next frame_sync come before ddr_rd send out all valid pixel |
| 1 | RW | 0x0 | alig_lane0_dir_data_timeout_pending When lane0 valid,will set this pending if did not receive valid data in valid period for 65535 vclk cycles |
| 0 | RW | 0x0 | alig_lane1_dir_data_timeout_pending When lane1 valid,will set this pending if did not receive valid data in valid period for 65535 vclk cycles |

Below are MIPI CSI host registers.

Version 0x000

| Bit(s) | R/W | Name | Description |
|--------|-----|---------|--------------------------------------|
| 31:0 | R | Version | Version of the CSI-2 Host Controller |

N_LANES 0x004

| Bit(s) | R/W | Name | Description |
|--------|-----|---------|---|
| 1:0 | R/W | N_LANES | Number of Active Data Lanes. <ul style="list-style-type: none"> • 00: 1 Data Lane (Lane 0) • 01: 2 Data Lanes (Lane 0, and 1) • 10: 3 Data Lanes (Lane 0,1 and 2) • 11: 4 Data Lanes (All) Can only be updated when the PHY lane is in stopstate. |

PHY_SHUTDOWNZ 0x008

| Bit(s) | R/W | Name | Description |
|--------|-----|---------------|---|
| 0 | R/W | PHY_SHUTDOWNZ | Shutdown input. This line is used to place the complete macro in power down. All analog blocks are in power down mode and digital logic is cleared. Active Low. |

DPHY_RSTZ 0x00C

| Bit(s) | R/W | Name | Description |
|--------|-----|-----------|--------------------------------|
| 0 | R/W | DPHY_RSTZ | DPHY reset output. Active Low. |

CSI2_RESETN 0x010

| Bit(s) | R/W | Name | Description |
|--------|-----|-------------|--|
| 0 | R/W | CSI2_RESETN | CSI-2 controller reset output. Active Low. |

PHY_STATE 0x014

| Bit(s) | R/W | Name | Description |
|--------|-----|---------------------|--|
| 0 | R | phy_rxulpesc_0 | Lane module 0 has entered the Ultra Low Power mode |
| 1 | R | phy_rxulpesc_1 | Lane module 1 has entered the Ultra Low Power mode |

| 1 | R/W | 0 | scaler fsm reset 1 = synchronous reset of FSMs in scaler design |
| 0 | R/W | 0 | Global FSM reset 1 = synchronous reset of FSMs in design (faster recovery after broken frame) when the MCU detects a broken frame or any other abnormal condition, the global_fsm_rest is expected to be used. MCU needs to follow a certain sequence for the same 1. Read the status register to know the exact source of the error interrupt. 2. Read the details of the error status register. 3. Mask all the interrupts. 4. Configure the input port register ISP_COMMON:input port: mode request to safe_stop mode. |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| | | | 5. Read back the ISP_COMMON:input port: mode status register to see the status of mode request. And wait until it shows the correct status. 6. Wait for the ISP_COMMON:isp global monitor: fr pipeline busy signal to become low. 7. Assert the global fsm reset. 8. Clear the global fsm reset. 9. Reconfigure the ISP configuration space. 10. Unmask the necessary interrupt sources. 11. Configure the input port in safe_start mode. |

<a>:dma global config [26:0]

[0] : check bid

[1] : check rid

The following signals are diagnostic signals which helps identifying some of the AXI interface error cases. This must be used only as debug signals. You should follow these sequence

- Mask the dma error interrupt
- clear DMA interrupt if there is an active interrupt
- Write appropriate values to these registers
- Clear DMA alarms to clear the existing alarm
- unmask the DMA error interrpt

| 31:0 | RO | - | hblank sum. The total number of the horizontal blanking samples observed within the sampling period |

0x000E0

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | RO | - | hblank num. The total number of the lines observed within the sampling period |

0x000E4

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | RO | - | vblank min. The minimum number of vertical blanking samples observed within the sampling period |

0x000E8

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | RO | - | vblank max. The maximum number of vertical blanking samples observed within the sampling period |

0x000EC

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | RO | - | vblank sum. The total number of the vertical blanking samples observed within the sampling period |

0x000F0

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | RO | - | vblank num. The total number of frames observed within the sampling period |

LUT3D_MEM Array

This is an array of 1000 32-bit registers. The address for element (i) is: $0x00508 + 4i$.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x00508 | 31:0 | R/W | - | Data(0) |
| 0x0050c | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x014A4 | 31:0 | R/W | - | Data(999) |

DS_SCALER_HFILT_COEFMEM Array

This is an array of 512 32-bit registers. The address for element (i) is: $0x014A8 + 4i$.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x014A8 | 31:0 | R/W | - | Data(0) |
| 0x014AC | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x01CA4 | 31:0 | R/W | - | Data(511) |

DS_SCALER_VFILT_COEFMEM Array

This is an array of 512 32-bit registers. The address for element (i) is: $0x01CA8 + 4i$.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x01CA8 | 31:0 | R/W | - | Data(0) |
| 0x01CAC | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x024A4 | 31:0 | R/W | - | Data(511) |

AEXP_HIST_STATS_MEM Array

This is an array of 1024 32-bit registers. The address for element (i) is: 0x024A8 + 4i.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x024A8 | 31:0 | R/W | - | Data(0) |
| 0x024AC | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x034A4 | 31:0 | R/W | - | Data(1023) |

IHIST_STATS_MEM Array

This is an array of 1024 32-bit registers. The address for element (i) is: 0x034A8 + 4i.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x034A8 | 31:0 | R/W | - | Data(0) |
| 0x034AC | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x044A4 | 31:0 | R/W | - | Data(1023) |

METERING_STATS_PING_MEM Array

This is an array of 6575 32-bit registers. The address for element (i) is: 0x044B0 + 4i.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x044B0 | 31:0 | R/W | - | Data(0) |
| 0x044B4 | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x0AB68 | 31:0 | R/W | - | Data(6574) |

DECOMPANDER0_PING_MEM Array

This is an array of 33 32-bit registers. The address for element (i) is: 0x0AB6C + 4i.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x0AB6C | 31:0 | R/W | - | Data(0) |
| 0x0AB70 | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x0ABEC | 31:0 | R/W | - | Data(32) |

DECOMPANDER1_PING_MEM Array

This is an array of 257 32-bit registers. The address for element (i) is: $0x0ABF0 + 4i$.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x0ABF0 | 31:0 | R/W | - | Data(0) |
| 0x0ABF4 | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x0AFF0 | 31:0 | R/W | - | Data(256) |

DPC_PING_MEM Array

This is an array of 4096 32-bit registers. The address for element (i) is: $0x0AFF4 + 4i$.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x0AFF4 | 31:0 | R/W | - | Data(0) |
| 0x0AFF8 | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x0EFF0 | 31:0 | R/W | - | Data(4095) |

CA_CORRECTION_FILTER_PING_MEM

Chromatic aberration correction polyphase filter lookup table, 32 entries of 32 bits each. Each entry address corresponds to fractional part of the pixel displacement.

Each entry is four 8-bit filter coefficients in fix point format.

- Codes 0...128 correspond to values 0.0 ... 1.0 (with resolution 1/128)
- Codes 129...191 correspond to values 129/128 ... 191/128
- Codes 192...255 correspond to values -64/128 ... -1/128

Array

This is an array of 32 32-bit registers. The address for element (i) is: $0x0EFF4 + 4i$.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x0EFF4 | 31:0 | R/W | - | Data(0) |
| 0x0EFF8 | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x0F070 | 31:0 | R/W | - | Data(31) |

CA_CORRECTION_MESH_PING_MEM

Chromatic aberration correction coordinate lookup table, 8192 entries for tile displacement of 16 bits each. Each entry is 16 bits, 8 LSBs is X displacement of the tile and 8 MSBs is Y displacement. The coordinates are coded as two's complement, 3.5 fixed point.

Array

This is an array of 4096 32-bit registers. The address for element (i) is: $0x0F074 + 4i$

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x0F074 | 31:0 | R/W | - | Data(0) |
| 0x0F078 | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x13070 | 31:0 | R/W | - | Data(4095) |

MESH_SHADING_PING_MEM Array

This is an array of 4096 32-bit registers. The address for element (i) is: $0x13074 + 4i$.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x13074 | 31:0 | R/W | - | Data(0) |
| 0x13078 | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x17070 | 31:0 | R/W | - | Data(4095) |

RADIAL_SHADING_PING_MEM

4 banks of radial shading lookup tables - for R,G,B,Ir channels. The banks start at the addresses 0, 256, 512, 768.

Each bank has 129 entries for piecewise linear table, each entry occupies 32 bits, of which 16 least significant bits are encoding shading correction factor in 4.12 fix point format.

Array

This is an array of 897 32-bit registers. The address for element (i) is: $0x17074 + 4i$.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x17074 | 31:0 | R/W | - | Data(0) |
| 0x17078 | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x17E74 | 31:0 | R/W | - | Data(896) |

IRIDIX_RP_PING_MEM Array

This is an array of 129 32-bit registers. The address for element (i) is: $0x17E78 + 4i$.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x17E78 | 31:0 | R/W | - | Data(0) |
| 0x17E7C | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x18078 | 31:0 | R/W | - | Data(128) |

IRIDIX_FP1_PING_MEM Array

This is an array of 129 32-bit registers. The address for element (i) is: $0x1807C + 4i$.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x1807C | 31:0 | R/W | - | Data(0) |
| 0x18080 | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x1827C | 31:0 | R/W | - | Data(128) |

FR_GAMMA_RGB_PING_MEM Array

This is an array of 129 32-bit registers. The address for element (i) is: $0x18280 + 4i$.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x18280 | 31:0 | R/W | - | Data(0) |
| 0x18284 | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x18480 | 31:0 | R/W | - | Data(128) |

DS_GAMMA_RGB_PING_MEM Array

This is an array of 129 32-bit registers. The address for element (i) is: $0x18484 + 4i$.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x18484 | 31:0 | R/W | - | Data(0) |
| 0x18488 | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x18684 | 31:0 | R/W | - | Data(128) |

LUMVAR_STATS_PING_MEM Array

This is an array of 512 32-bit registers. The address for element (i) is: 0x18688 + 4i.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x18688 | 31:0 | R/W | - | Data(0) |
| 0x1868C | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x18E84 | 31:0 | R/W | - | Data(512) |

ISP_CONFIG_PING (SINGLE_CONTEXT_CONFIG)

Top

Miscellaneous top-level ISP controls

0x18E88

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x04380780 | Active Height. Active video height in lines |
| 15:0 | R/W | | Active Width. Active video width in pixels |

0x18E8C

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:26 | R/W | 0x00000000 | Reserved |
| 25:24 | R/W | | Linear data src. Linear data src 0 = Sensor stitched and linear data directly coming from sensor 1 = linear data from frame stitch 2 = Sensor companded data linearised through decompander 3 = reserved |
| 23:18 | R/W | | Reserved |
| 17:16 | R/W | | Cfa pattern. The pixel arrangement of the CFA array on the sensor. Set in the Top register group and used by several blocks in the pipeline: 0 = RGGB |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| | | | 1 = reserved 2 = RlRGB 3 = RGlRB |
| 15:10 | R/W | | Reserved |
| 9:8 | R/W | | RGGb start post mirror. Starting color of the rggb pattern for all the modules after mirror this must be same as RGGb start pre mirror if mirror is bypassed |
| 7:2 | R/W | | Reserved |
| 1:0 | R/W | | RGGb start pre mirror. Starting color of the rggb pattern for all the modules before mirror 0 = R Gr Gb B 1 = Gr R B Gb 2 = Gb B R Gr 3 = B Gb Gr R |

0x18EAC

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:6 | R/W | | Reserved |
| 5 | R/W | | Bypass frame stitch. Bypass frame stitching logic |
| 4 | R/W | | Bypass gain wdr. Bypass gain wdr |
| 3 | R/W | 0x00000000 | Bypass sensor offset wdr. Bypass sensor offset wdr |
| 2 | R/W | | Bypass decompande. Bypass front end decompander |
| 1 | R/W | | Bypass input formatter. Bypass input formatter module. |
| 0 | R/W | | Bypass video test gen. Bypass video test generator |

0x18EB0

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:5 | R/W | | Reserved |
| 4 | R/W | | Bypass defect pixel. Bypass static defect pixel |
| 3 | R/W | 0x00000004 | Bypass RAW frontend. Bypass RAW frontend (green equalization and dynamic defect pixel) |
| 2 | R/W | | Bypass fe sqrt. Bypass square root function before raw frontend |

| | | | |
|---|-----|--|---|
| 1 | R/W | | Bypass frontend sensor offset. Bypass digital gain module |
| 0 | R/W | | Bypass digital gain. Bypass digital gain module |

0x18EB8

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:3 | R/W | 0x00000002 | Reserved |
| 2 | R/W | | Bypass ca correction. Bypass chromatic aberration correction |
| 1 | R/W | | Bypass temper |
| 0 | R/W | | Bypass sinter |

0x18EBC

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:7 | R/W | 0x00000000 | Reserved |
| 6 | R/W | | Bypass iridix |
| 5 | R/W | | Bypass iridix gain |
| 4 | R/W | | Bypass white balance |
| 3 | R/W | | Bypass mesh shading |
| 2 | R/W | | Bypass radial shading |
| 1 | R/W | | Bypass sensor offset pre shading. Bypass sensor offset pre shading |
| 0 | R/W | | Bypass square be. Bypass backend square |

0x18EC0

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|------------------------|
| 31:8 | R/W | 0x00000000 | Reserved |
| 7 | R/W | | Bypass noneq u gamma |
| 6 | R/W | | Bypass s 3D lut |
| 5 | R/W | | Bypass s CNR |
| 4 | R/W | | Bypass s CCM |
| 3 | R/W | | Bypass pf correctio n |
| 2 | R/W | | Bypass demosai c rgbir |
| 1 | R/W | | Bypass demosai c rgb |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------------|
| 0 | R/W | | Bypass s mirror. Bypass EW mirror |

0x18EC4

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---------------------|
| 31:4 | R/W | 0x00000000 | Reserved |
| 3 | R/W | | Bypass fr cs conv |
| 2 | R/W | | Bypass fr sharpen |
| 1 | R/W | | Bypass fr gamma rgb |
| 0 | R/W | | Bypass fr crop |

0x18EC8

| Bit(s) | R/W | Default | Description |

| 31:5 | R/W | 0x00000000 | Reserved |
| 4 | R/W | | Bypass ds cs conv |
| 3 | R/W | | Bypass ds sharpen |
| 2 | R/W | | Bypass ds gamma rgb |
| 1 | R/W | | Bypass ds scaler |
| 0 | R/W | | Bypass ds crop |

0x18ECC

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:10 | R/W | 0x00000000 | Reserved |
| 9:8 | R/W | | ISP processing fr bypass mode. ISP FR bypass modes. For debug purposes only. Should be set to 0 during normal operation. Used to bypass entire ISP after input port or to pass the stitched image directly to the output. 0 = Full processing 1 = Bypass entire ISP processing and output [19:4] of raw sensor data After video test gen 2 = Bypass entire ISP processing and output LSB 10-bits bits of raw sensor data After video test gen. Data must be MSB aligned 3 = Reserved |
| 7:2 | R/W | | Reserved |
| 1 | R/W | | ISP downscale pipe disable. |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| | | | 0: Downscale pipeline is enabled 1: Downscale pipeline is disabled. No data is sent out in DMA and streaming channel 0 = Select processed. 1 = Bypass ISP RAW processing. |
| 0 | R/W | | ISP RAW bypass. Used to select between normal ISP processing with image sensor data and up to 12 bit RGB input. In the latter case data is reinserted into pipeline after purple fringing correction block. 0 = Select processed. 1 = Bypass ISP RAW processing. |

0x18ED0

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:25 | R/W | | Reserved |
| 24 | R/W | | aexp src. 0 = After static white balance when applied before shading 1 = After static white balance when applied after shading |
| 23:20 | R/W | | Reserved |
| 19 | R/W | | Lumavar switch. Luma variance tap in the pipeline. 0 = Full resolution pipeline, 1 = Downscaled pipeline |
| 18 | R/W | | Lumavar Disable. 0 = Enabled, 1 = Disabled |
| 17 | R/W | | Reserved |
| 16 | R/W | 0x00010000 | iHist disable. Post iridix histogram enable. Enables statistics gathering for global histogram 0 = Enabled, 1 = Disabled |
| 15 | R/W | | Reserved |
| 14:13 | R/W | | AEXP Histogram switch. AE global histogram tap in the pipeline. Location of statistics gathering for 1024 bin global histogram 0 = After static white balance whose position is selected by aexp_src signal 1 = After WDR Frame Stitch. if its sensor companded data, then use decompanded output. If its sensor linearised data, then use it directly 2 = After VTPG, 3 = reserved |
| 12 | R/W | | AEXP hist disable. 0: AEXP 1024-bin histogram enabled 1: AEXP 1024-bin histogram disabled |
| 11:10 | R/W | | Reserved |
| 9 | R/W | | AWB switch. AWB tap in the pipeline. Location of AWB statistics collection. |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| | | | 0 = Immediately after demosaic, 1 = Immediately after CNR |
| 8 | R/W | | AWB disable. 0: AWB enabled, 1: AWB disabled |
| 7:6 | R/W | | Reserved |
| 5 | R/W | | AF switch. AF tap in the pipeline. . 0 = After Sinter, 1 = before Sinter |
| 4 | R/W | | AF disable. 0: AF enabled, 1: AF disabled |
| 3 | R/W | | Reserved |
| 2:1 | R/W | | AE switch. AE 5bin histogram tap in the pipeline. Location of AE statistic collection. 0 = After static white balance whose position is selected by aexp_src signal 1 = After WDR Frame Stitch. if its sensor companded data, then use decompanded output. If its sensor linearised data, then use it directly 2 = After VTPG, 3 = reserved |
| 0 | R/W | | AE 5bin hist disable. 0: AEXP 5-bin histogram enabled, 1: AEXP 5-bin histogram disabled |

|--------|-----|------------|---|
| 31:20 | R/W | 0x00008FFF | Reserved |
| 19:0 | R/W | | b foregnd. Blue foreground value 16bit, MSB aligned to used width |

0x18F88

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:20 | R/W | 0x00003CAA | Reserved |
| 19:0 | R/W | | rgb gradient. RGB gradient increment per pixel (0-15) for first channel Format: unsigned 4.12-bit fixed-point |

0x18F8C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | rgb gradient start. RGB gradient start value for first channel 16bit, MSB aligned to used width |

0x18F90

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:30 | R/W | 0x01000001 | Reserved |
| 29:16 | R/W | | rect bot. Rectangle bottom line number 1-n |
| 15:14 | R/W | | Reserved |
| 13:0 | R/W | | rect top. Rectangle top line number 1-n |

0x18F94

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:30 | R/W | 0x01000001 | Reserved |
| 29:16 | R/W | | rect right. Rectangle right pixel number 1-n |
| 15:14 | R/W | | Reserved |
| 13:0 | R/W | | rect left. Rectangle left pixel number 1-n |

input formatter

Adapts received data format to ISP format see below table of setting to be used for various sensors/modes.

| Sensor mode | Description |
|---|--|
| Linear data | Up to 20 bits and MSB aligned. |
| Sensor companded data | Up to 16 bits and MSB aligned. |
| 3-2 exposures wdr: 16bit Linear + 12bit VS | Supported companded data widths are: 8, 10, 12, 14, 16 |
| 3-2 exposures wdr: 12bit companded + 12bit VS | OV2770 or equivalent. |
| 3:2 mux mode | OV10640 3:2 mux mode |
| 16-bit log mode | OV10640 16bit log mode |

0x18F98

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:19 | R/W | 0x00020000 | Reserved |
| 18:16 | R/W | | input bitwidth select. Input bitwidth select 0 = 8 bits 1 = 10 bits 2 = 12 bits 3 = 14 bits 4 = 16 bits 5 = 20 bits (no 18 bits) 6 = Reserved 7 = Reserved |
| 15:3 | R/W | | Reserved |
| 2:0 | R/W | | mode in. Input mode |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| | | | 0 = Linear data 1 = 2:3 multiple exposure multiplexing 2 = Logarithmic encoding 3 = Companding curve with knee points 4 = 16bit linear+ 12bit VS 5 = 12bit companded + 12bit VS 6 = Reserved 7 = pass through mode |

0x18F9C

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:18 | R/W | 0x00001000 | Reserved |
| 17:0 | R/W | | factor ML. 18 bit, 6.12 fix point - ratio between long and medium exposure for 2:3 multiplexed mode |

0x18FA0

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:13 | R/W | 0x00001000 | Reserved |
| 12:0 | R/W | | factor MS. 13 bit, 1.12 fix point - ratio between short and medium exposure for 2:3 multiplexed mode |

0x18FA4

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | black level. Black level of sensor data for 2:3 multiplexed mode |

0x18FA8

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--------------------------------|
| 31:16 | R/W | 0x05800200 | knee point1. Second knee point |
| 15:0 | R/W | | knee point0. First knee point |

0x18FAC

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|-------------------------------|
| 31:16 | R/W | 0x00000881 | Reserved |
| 15:0 | R/W | | knee point2. Third knee point |

0x18FB0

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:28 | R/W | 0x09060402 | Reserved |
| 27:24 | R/W | | slope3 select. Last slope for companding table segments (encoding is the same as slope0 select) |
| 23:20 | R/W | | Reserved |
| 19:16 | R/W | | slope2 select. Third slope for companding table segments (encoding is the same as slope0 select) |
| 15:12 | R/W | | Reserved |
| 11:8 | R/W | | slope1 select. Second slope for companding table segments (encoding is the same as slope0 select) |
| 7:4 | R/W | | Reserved |
| 3:0 | R/W | | slope0 select. First slope for companding table segments 0 = 1x 1 = 2x 2 = 4x 3 = 8x 4 = 16x 5 = 32x 6 = 64x 7 = 128x 8 = 256x 9 = 512x 10 = 1024x 11 = 2048x 12 = 4096x 13 = 8192x 14 = 16384x 15 = 32768x |

sensor offset wdr l

offset offset subtraction for each color channel and exposure

0x18FB4

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | offset 01. offset offset for color channel 01 (Gr) |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | offset 00. offset offset for color channel 00 (R) |

0x18FB8

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | offset 11. offset offset for color channel 11 (B) |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | offset 10. offset offset for color channel 10 (Gb) |

sensor offset wdr m

offset offset subtraction for each color channel and exposure

0x18FBC

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | offset 01. offset offset for color channel 01 (Gr) |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | offset 00. offset offset for color channel 00 (R) |

0x18FC0

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | offset 11. offset offset for color channel 11 (B) |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | offset 10. offset offset for color channel 10 (Gb) |

sensor offset wdr s

offset offset subtraction for each color channel and exposure

0x18FC4

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | offset 01. offset offset for color channel 01 (Gr) |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | offset 00. offset offset for color channel 00 (R) |

0x18FC8

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | offset 11. offset offset for color channel 11 (B) |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | offset 10. offset offset for color channel 10 (Gb) |

sensor offset wdr vs

offset offset subtraction for each color channel and exposure

0x18FCC

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | offset 01. offset offset for color channel 01 (Gr) |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | offset 00. offset offset for color channel 00 (R) |

0x18FD0

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | offset 11. offset offset for color channel 11 (B) |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | offset 10. offset offset for color channel 10 (Gb) |

gain wdr

Gain adjustment for the WDR stitching

0x18FD4

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:29 | R/W | 0x01000100 | Reserved |
| 28:16 | R/W | | Gain m. Gain applied to ch-medium data in 5.8 format |
| 15:13 | R/W | | Reserved |
| 12:0 | R/W | | Gain l. Gain applied to ch-long data in 5.8 format |

0x18FD8

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:29 | R/W | 0x01000100 | Reserved |
| 28:16 | R/W | | Gain vs. Gain applied to ch-vs data in 5.8 format |
| 15:13 | R/W | | Reserved |
| 12:0 | R/W | | Gain s. Gain applied to ch-short data in 5.8 format |

0x18FDC

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | black level m. Sensor offset applied to ch-medium data |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | black level l. Sensor offset applied to ch-long data |

0x18FE0

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | black level vs. Sensor offset applied to ch-veryshort data |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | black level s. Sensor offset applied to ch-short data |

frame stitch

4-exposure wide-dynamic-range blending

NOTE:

If the WDR is configured to stitch 2 exposures, then the configuration must be done through the LM_ pair the short exposures black level must be programmed through the med_black_level register so that the LM pair can be used.

0x18FE4

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:16 | R/W | 0 | Reserved |
| 15:8 | R/W | 0 | output select. This register is only for debug purpose. for normal operation it must be kept in its default value (0) 0 : normal stitched output 1 : long data routed out 2 : medium data routed out 4 : short data routed out 8 : very short data routed out 16: LM stitched output taken out 32: MS stitched output taken out 64: SVS stitched output taken out others: reserved |
| 7:2 | R/W | 0 | Reserved |
| 1:0 | R/W | 0 | mode in. 0 : 4-exposure 1 : 2-exposure 2 : 3-exposure 3 : 4-exposure |

0x18FE8

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:28 | R/W | 0x01000100 | Reserved |
| 27:16 | R/W | | MS Exposure Ratio. Sets ratio between medium and short exposures - this must match the actual exposure ratio on the sensor Format: unsigned 6.6-bit fixed-point |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | LM Exposure Ratio. Sets ratio between long and medium exposures - this must match the actual exposure ratio on the sensor Format: unsigned 6.6-bit fixed-point |

0x18FEC

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:12 | R/W | 0x01000100 | Reserved |
| 11:0 | R/W | | SVS Exposure Ratio. Sets ratio between short and very short exposures - this must match the actual exposure ratio on the sensor Format: unsigned 6.6-bit fixed-point |

0x18FF0

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:28 | R/W | 0x0C000F00 | Reserved |
| 27:16 | R/W | | LM Thresh low. Data below this threshold will be taken from long exposure only |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | LM Thresh high. These two thresholds are for LM pairs. Both are with respect to the longer stitches. Data above this threshold will be taken from short exposure only |

0x18FF4

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:28 | R/W | 0x0C000F00 | Reserved |
| 27:16 | R/W | | Data below this threshold will be taken from long exposure only |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | LM Thresh high. These two thresholds are for MS pairs. Both are with respect to the longer stitches. Data above this threshold will be taken from short exposure only |

0x18FF8

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:28 | R/W | 0x0C000F00 | Reserved |
| 27:16 | R/W | | SVS Thresh low. Data below this threshold will be taken from long exposure only |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | SVS Thresh high. These two thresholds are for SVS pairs. Both are with respect to the longer stitches. Data above this threshold will be taken from short exposure only |

0x18FFC

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | Black level Medium. Black level for medium exposure input |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | Black level long. Black level for long exposure input Note: <i>If the wdr unit is configured to use as 2-exposure, THIS REGISTER POSITION must contain the black level of short exposure as the LM pair is used for all other configurations</i> |

0x19000

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | Black level very Short. Black level for very short exposure input |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | Black level Short. Black level for short exposure input |

0x19004

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | Black level Out. Black level for module output |

0x19008

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:28 | R/W | 0x06000180 | Reserved |
| 27:16 | R/W | | MS NP mult. The noise profile weights are multiplied by this value to give expected noise amplitude. |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | LM NP mult. The noise profile weights are multiplied by this value to give expected noise amplitude. |

0x1900C

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|-------------|
| 31:28 | R/W | 0x0C000600 | Reserved |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 27:16 | R/W | | LM Alpha MOV slope. This defines the gradient of the motion alpha ramp. Higher values mean a steeper ramp and so a more rapid transition between non-motion-corrected and motion-corrected regions. |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | SVS NP mult. The noise profile weights are multiplied by this value to give expected noise amplitude. |

0x19010

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:28 | R/W | 0x01800180 | Reserved |
| 27:16 | R/W | | SVS Alpha MOV slope. This defines the gradient of the motion alpha ramp. Higher values mean a steeper ramp and so a more rapid transition between non-motion-corrected and motion-corrected regions. |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | MS Alpha MOV slope. This defines the gradient of the motion alpha ramp. Higher values mean a steeper ramp and so a more rapid transition between non-motion-corrected and motion-corrected regions. |

0x19014

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:28 | R/W | 0x01000100 | Reserved |
| 27:16 | R/W | | Gain B. Multiplier for color channel B Format: unsigned 4.8-bit fixed-point |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | Gain R. Multiplier for color channel R Format: unsigned 4.8-bit fixed-point |

0x19018

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:12 | R/W | 0x00000100 | Reserved |
| 11:0 | R/W | | Consistency thresh mov. Pixel consistency reporting - motion threshold Format: unsigned 4.8-bit fixed-point |

0x1901C

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:20 | R/W | 0x00080000 | Reserved |
| 19:0 | R/W | | Consistency thresh lvl. Pixel consistency reporting - flicker threshold Format: unsigned 4.8-bit fixed-point |

0x19020

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:22 | R/W | 0 | Reserved |
| 21:16 | R/W | 0 | lm neg weight. Higher values make it more likely to interpret differences between the long and medium exposures as noise (and thus do no motion correction). |
| 15:14 | R/W | 0 | Reserved |
| 13:8 | R/W | 0 | lm pos weight. Lower values make it more likely to interpret differences between the long and medium exposures as noise (and thus do no motion correction). |
| 7:6 | R/W | 0 | Reserved |
| 5:0 | R/W | 0 | lm noise thresh. Higher values make it more likely to interpret differences between the long and medium exposures as noise (and thus do no motion correction). |

frame stitch NP LUT VS

Noise profile for short exposure data at frame stitch.

This is an array of 128 8-bit registers. The address for element (i) is: $0x19064 + 4 * \text{int}(i / 4)$.

| Address | Bit(s) | R/W | Default | Description |
|---------|--------|-----|---------|--|
| 0x19064 | 31:24 | R/W | - | Weight lut(3). Noise profile LUT. Calculated during calibration process. |

| Address | Bit(s) | R/W | Default | Description |
|------------------------|--------|-----|---------|---|
| | 23:16 | R/W | - | Weight lut(2). Noise profile LUT. Calculated during calibration process. |
| | 15:8 | R/W | - | Weight lut(1). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(0). Noise profile LUT. Calculated during calibration process. |
| 0x19068 | 31:24 | R/W | - | Weight lut(7). Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(6). Noise profile LUT. Calculated during calibration process. |
| | 15:8 | R/W | - | Weight lut(5). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(4). Noise profile LUT. Calculated during calibration process. |
| ... repeated until ... | | | | |
| 0x190E0 | 31:24 | R/W | - | Weight lut(127) . Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(126) . Noise profile LUT. Calculated during calibration process. |
| | 15:8 | R/W | - | Weight lut(125). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(124). Noise profile LUT. Calculated during calibration process. |

frame stitch NP LUT S

Noise profile for med2 exposure data at frame stitch

This is an array of 128 8-bit registers. The address for element (i) is: $0x190E4 + 4 * \text{int}(i / 4)$.

| Address | Bit(s) | R/W | Default | Description |
|------------------------|--------|-----|---------|---|
| 0x190E4 | 31:24 | R/W | - | Weight lut(3). Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(2). Noise profile LUT. Calculated during calibration process. |
| | 15:8 | R/W | - | Weight lut(1). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(0). Noise profile LUT. Calculated during calibration process. |
| 0x190E8 | 31:24 | R/W | - | Weight lut(7). Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(6). Noise profile LUT. Calculated during calibration process. |
| | 15:8 | R/W | - | Weight lut(5). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(4). Noise profile LUT. Calculated during calibration process. |
| ... repeated until ... | | | | |
| 0x19160 | 31:24 | R/W | - | Weight lut(127) . Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(126) . Noise profile LUT. Calculated during calibration process. |

| Address | Bit(s) | R/W | Default | Description |
|---------|--------|-----|---------|--|
| | 15:8 | R/W | - | Weight lut(125). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(124). Noise profile LUT. Calculated during calibration process. |

frame stitch NP LUT M

Noise profile for med1 exposure data at frame stitch

This is an array of 128 8-bit registers. The address for element (i) is: $0x19164 + 4 * \text{int}(i / 4)$.

| Address | Bit(s) | R/W | Default | Description |
|------------------------|--------|-----|---------|---|
| 0x19164 | 31:24 | R/W | - | Weight lut(3). Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(2). Noise profile LUT. Calculated during calibration process. |
| | 15:8 | R/W | - | Weight lut(1). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(0). Noise profile LUT. Calculated during calibration process. |
| 0x19168 | 31:24 | R/W | - | Weight lut(7). Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(6). Noise profile LUT. Calculated during calibration process. |
| | 15:8 | R/W | - | Weight lut(5). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(4). Noise profile LUT. Calculated during calibration process. |
| ... repeated until ... | | | | |
| 0x191E0 | 31:24 | R/W | - | Weight lut(127) . Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(126) . Noise profile LUT. Calculated during calibration process. |
| | 15:8 | R/W | - | Weight lut(125). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(124). Noise profile LUT. Calculated during calibration process. |

frame stitch NP LUT L

Noise profile for long exposure data at frame stitch

This is an array of 128 8-bit registers. The address for element (i) is: $0x191E4 + 4 * \text{int}(i / 4)$.

| Address | Bit(s) | R/W | Default | Description |
|------------------------|--------|-----|---------|---|
| 0x191E4 | 31:24 | R/W | - | Weight lut(3). Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(2). Noise profile LUT. Calculated during calibration process. |
| | 15:8 | R/W | - | Weight lut(1). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(0). Noise profile LUT. Calculated during calibration process. |
| 0x191E8 | 31:24 | R/W | - | Weight lut(7). Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(6). Noise profile LUT. Calculated during calibration process. |
| | 15:8 | R/W | - | Weight lut(5). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(4). Noise profile LUT. Calculated during calibration process. |
| ... repeated until ... | | | | |
| 0x19260 | 31:24 | R/W | - | Weight lut(127) . Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(126) . Noise profile LUT. Calculated during calibration process. |
| | 15:8 | R/W | - | Weight lut(125). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(124). Noise profile LUT. Calculated during calibration process. |

decompander0 0x19264

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:5 | R/W | 0 | Reserved |
| 4 | R/W | 0 | Offset Mode. Lookup0 reflection mode for black offset region 0 = Manual curve reflection 1 = Automatic curve reflection |
| 3:1 | R/W | 0 | Reserved |
| 0 | R/W | 0 | Enable. Frontend lookup0 enable: 0=off 1=on |

decompander1 0x19268

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:5 | R/W | 0 | Reserved |
| 4 | R/W | 0 | Offset Mode. Lookup0 reflection mode for black offset region 0 = Manual curve reflection 1 = Automatic curve reflection |
| 3:1 | R/W | 0 | Reserved |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 0 | R/W | 0 | Enable. Frontend lookup0 enable: 0=off 1=on |

digital gain 0x1926C

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:12 | R/W | 0x00000100 | Reserved |
| 11:0 | R/W | | Gain. Gain applied to data in 4.8 format |

sensor offset fe

offset offset subtraction for each color channel and exposure

0x19274

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | offset 00. offset offset for color channel 00 (R) |

0x19278

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | offset 01. offset offset for color channel 01 (Gr) |

0x1927C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | offset 10. offset offset for color channel 10 (Gb) |

0x19280

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | offset 11. offset offset for color channel 11 (B) |

sqrt

sensor offset for the sqrt module

0x19284

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | black level in. input Data black level |

0x19288

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | black level out. output Data black level |

raw frontend

RAW frontend processing

0x1928C

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:8 | R/W | 0x00000005 | Reserved |
| 7 | R/W | | bright disable. Disable detection of bright pixels |
| 6 | R/W | | dark disable. Disable detection of dark pixels |
| 5:4 | R/W | | Reserved |
| 3 | R/W | | show dynamic defect pixel. Show Defect Pixel: 0=off, 1=on |
| 2 | R/W | | dp enable. Dynamic Defect Pixel enable: 0=off, 1=on |
| 1 | R/W | | Reserved |
| 0 | R/W | | ge enable. Green equalization enable: 0=off, 1=on |

0x19290

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------|
| 31:16 | R/W | 0 | Reserved |
| 15:0 | R/W | 0 | debug sel. Debug selection port |

0x19294

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---------------------------------------|
| 31:28 | R/W | 0x00400200 | Reserved |
| 27:16 | R/W | | dp threshold. Defect pixel threshold. |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | dp slope. Slope for HP Mask function |

0x19298

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:24 | R/W | 0x00000266 | Reserved |
| 23:16 | R/W | | dp blend. Controls blending between non-directional and directional replacement values in dynamic defect pixel correction. 0x00 Replace detected defects with non-directional replacement value 0xFF Replace detected defects with directional replacement value |
| 15:0 | R/W | | dpdev threshold. Controls the aggressiveness of the dynamic defect pixel correction near edges. |

0x1929C

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x04000000 | ge threshold. green equalization threshold |
| 15:8 | R/W | | Reserved |
| 7:0 | R/W | | ge strength. Controls strength of Green equalization. Set during calibration. |

0x192A0

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:24 | R/W | 0x008000AA | Reserved |
| 23:15 | R/W | | ge sens. Controls the sensitivity of green equalization to edges. |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | ge slope. Slope for GE Mask function |

0x192A4

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:16 | R/W | 0x00000150 | Sigma In. Manual override of noise estimation |
| 15:0 | R/W | | line thresh. Controls the directional nature of the dynamic defect pixel correction near edges |

0x19A8

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:16 | R/W | 0x00003000 | Reserved |
| 15:8 | R/W | | Thresh Long. Noise threshold for long exposure data Format: unsigned 4.4-bit floating-point |
| 7:0 | R/W | | Thresh Short. Noise threshold for short exposure data Format: unsigned 4.4-bit floating-point |

raw frontend np

Noise profile controls for RAW frontend

0x192AC

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:16 | R/W | 0x0000FFFF | Reserved |
| 15:0 | R/W | | Exp Thresh. Threshold for determining long/short exposure data |

0x192B0

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:16 | R/W | 0x00000420 | Reserved |
| 15:8 | R/W | | Long Ratio. Multiplier applied to long exposure data for noise profile calculation Format: unsigned 6.2-bit fixed-point |
| 7:0 | R/W | | Short Ratio. Multiplier applied to short exposure data for noise profile calculation Format: unsigned 6.2-bit fixed-point |

0x192B4

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:9 | R/W | 0 | Reserved |
| 8 | R/W | 0 | NP off reflect. Defines how values below black level are obtained. 0: Repeat the first table entry. |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| | | | 1: Reflect the noise profile curve below black level. |
| 7 | R/W | 0 | Reserved |
| 6:0 | R/W | 0 | NP off. Noise profile black level offset |

raw frontend np lut

Noise profile controls for RAW frontend

This is an array of 128 8-bit registers. The address for element (i) is: $0x192B8 + 4 * \text{int}(i / 4)$.

| Address | Bit(s) | R/W | Default | Description |
|------------------------|--------|-----|---------|--|
| 0x192B8 | 31:24 | R/W | - | Weight lut(3). Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(2). Noise profile LUT. Calculated during calibration process. |
| | 15:8 | R/W | - | Weight lut(1). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(0). Noise profile LUT. Calculated during calibration process. |
| 0x192BC | 31:24 | R/W | - | Weight lut(7). Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(6). Noise profile LUT. Calculated during calibration process. |

| | 15:8 | R/W | - | Weight lut(125). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(124). Noise profile LUT. Calculated during calibration process. |

defect pixel

Detection and processing of static defect-pixels

0x1933C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:4 | R/W | 0 | Reserved |
| 3 | R/W | 0 | Detection enable. Starts detection |
| 2 | R/W | 0 | Show Static Defect Pixels. Show which pixels have been detected as bad |
| 1 | R/W | 0 | Correction Enable. Correction enable: 0=off 1=on |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 0 | R/W | 0 | Show Reference. For debug purposes. Show reference values which are compared with actual values to detect bad pixels |

0x19340

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | RO | - | Reserved |
| 27:16 | RO | - | Table Start. Address of first defect-pixel in defect-pixel store |
| 15:13 | RO | - | Reserved |
| 12:1 | RO | - | Defect Pixel Count. Number of defect-pixels detected |
| 0 | RO | - | Overflow. Table overflow flag |

0x19344

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | Defect Pixel Count In. Number of defect-pixels in the written table |

sinter**0x19348**

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:8 | R/W | 0x0000001C | Reserved |
| 7 | R/W | | rm enable. Adjusts sinter strength radially from center to compensate for Lens shading correction. enable: 0=off, 1=on |
| 6 | R/W | | Int select. Select intensity filter. Should not be modified from suggested values. |
| 5 | R/W | | Filter select. Sinter filter fine tuning. Should not be modified from suggested values. |
| 4 | R/W | | Enable. Sinter enable: 0=off 1=on |
| 3:0 | R/W | | Reserved |

0x1934C

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:6 | R/W | 0x00000034 | Reserved |
| 5 | R/W | | nonlinear wkgen. This config is only valid fr sinter3 Enables (1) or disables (0) nonlinear weight generation |
| 4 | R/W | | nln en. This config is only valid fr sinter3 Enables (1) or disables (0) the NLM filter |
| 3:0 | R/W | | int config. Intensity blending with mosaic raw |

0x19350

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:8 | R/W | 0x00000009 | Reserved |
| 7:0 | R/W | | sad filt thresh. Block match difference filtering threshold |

0x19354

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x01680280 | rm center y. Center y coordinate of shading map |
| 15:0 | R/W | | rm center x. Center x coordinate of shading map |

0x19358

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:16 | R/W | 0x00000100 | Reserved |
| 15:0 | R/W | | rm off center mult. Normalizing factor which scales the radial table to the edge of the image. Calculated as $2^{31}/R^2$ where R is the furthest distance from the center coordinate to the edge of the image in pixels. |

0x1935C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:24 | R/W | 0 | Thresh 4h. Noise threshold for low horizontal spatial frequencies |
| 23:16 | R/W | 0 | Thresh 2h. Noise threshold for low horizontal spatial frequencies |
| 15:8 | R/W | 0 | Thresh 1h. Noise threshold for high horizontal spatial frequencies |
| 7:0 | R/W | 0 | Thresh 0h. Noise threshold for high horizontal spatial frequencies |

0x19360

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:24 | R/W | 0 | Thresh 4v. Noise threshold for high vertical spatial frequencies |
| 23:16 | R/W | 0 | Thresh 2v. Noise threshold for high vertical spatial frequencies |
| 15:8 | R/W | 0 | Thresh 1v. Noise threshold for low vertical spatial frequencies |
| 7:0 | R/W | 0 | Thresh 0v. Noise threshold for low vertical spatial frequencies |

0x19364

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:24 | R/W | 0xFFFFFFFF | Strength 4. Noise reduction effect for low spatial frequencies |
| 23:16 | R/W | | Strength 2. Unused - no effect |
| 15:8 | R/W | | Strength 1. Noise reduction effect for high spatial frequencies |
| 7:0 | R/W | | Strength 0. Unused - no effect |

sinter Noise Profile

Noise profile controls for Sinter

0x19368

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:16 | R/W | 0x00000803 | Reserved |
| 15:8 | R/W | | global offset. A global offset that will be added to each of the hlog... values above.. |
| 7:3 | R/W | | Reserved |
| 2 | R/W | | Black Reflect. Specifies how to deal with data below black level. 0: Clip to zero, 1: Reflect. |
| 1 | R/W | | use exp mask. 1 = use exposure mask provided by Frame stitching or threshold |
| 0 | R/W | | Use LUT. 1 = use LUT data 0 = use exposure mask provided by Frame stitching or threshold |

0x1936C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:16 | R/W | 0 | Reserved |
| 15:0 | R/W | 0 | Black Level. Black level offset for Mode 0 |

0x19370

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | | Reserved |
| 15:0 | R/W | 0x00004000 | <p>Thresh1. Exposure thresholds. Used to determine which exposure generated the current pixel.</p> <p>Pixels with a value greater than or equal to a given threshold will be deemed to have been generated by the shorter exposure.</p> <p>Pixels with a value less than a given threshold will be deemed to have been generated by the longer exposure.</p> <p>E.G. Where 4 exposures are used: $VS \geq \text{Thresh } 3 > S \geq \text{Thresh } 2 > M \geq \text{Thresh } 1 > L$</p> <p>For 3 exposures set Thresh 1 to 0 For 2 exposures set Thresh 1 and Thresh 2 to 0 For 1 exposures set all exposure thresholds to 0</p> |

0x19374

temper

Temporal noise reduction

0x1AA1C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:2 | R/W | 0 | Reserved |
| 1 | R/W | 0 | Temper2 Mode. 0: 0=Temper3 mode 1=Temper2 mode |
| 0 | R/W | 0 | Enable. Temper enable: 0=off 1=on |

0x1AA24

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x00000202 | Reserved |
| 15:8 | R/W | | Delta |
| 7:4 | R/W | | Reserved |
| 3:0 | R/W | | Recursion Limit. Controls length of filter history. Low values result in longer history and stronger temporal filtering |

temper Noise Profile

Noise profile controls for Temper

0x1AA28

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x00000803 | Reserved |
| 15:8 | R/W | | global offset. A global offset that will be added to each of the hlog... values above. |
| 7:3 | R/W | | Reserved |
| 2 | R/W | | Black Reflect. Specifies how to deal with data below black level. 0: Clip to zero, 1: Reflect |
| 1 | R/W | | use exp mask. 1 = use exposure mask provided by Frame stitching or threshold |
| 0 | R/W | | Use LUT |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| | | | 1 = use LUT data 0 = use exposure mask provided by Frame stitching or threshold |

0x1AA2C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:16 | R/W | 0 | Reserved |
| 15:0 | R/W | 0 | Black Level. Black level offset for Mode 0 |

0x1AA30

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:16 | R/W | | Reserved |
| 15:0 | R/W | 0x00004000 | Thresh1. Exposure thresholds. Used to determine which exposure generated the current pixel. Pixels with a value greater than or equal to a given threshold will be deemed to have been generated by the shorter exposure. Pixels with a value less than a given threshold will be deemed to have been generated by the longer exposure. E.G. Where 4 exposures are used: $VS \geq \text{Thresh } 3 > S \geq \text{Thresh } 2 > M \geq \text{Thresh } 1 > L$ For 3 exposures set Thresh 1 to 0 For 2 exposures set Thresh 1 and Thresh 2 to 0 For 1 exposures set all exposure thresholds to 0 |

0x1AA34

| | | | 31 0 |

0x1AB84

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | R/W | 0 | msb bank base writer. base address for frame buffer, should be word-aligned. This is used only in 16bit temper3 mode. In 16bit temper3 mode, each 40 bit temper data (32bit data+8bit meta data) is split into 2 chunks and each is stored in one of the buffers. The MSB part is stored into this buffer. |

0x1AB88

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | R/W | 0 | lsb bank base writer. base address for frame buffer, should be word-aligned. This is used all the times temper is used.. In 16bit temper3 mode, each 40 bit temper data (32bit data+8bit meta data) is split into 2 chunks and each is stored in one of the buffers. The LSB part is stored into this buffer. |

0x1AB8C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | R/W | 0 | msb bank base reader. base address for frame buffer, should be word-aligned. This is used only in 16bit temper3 mode. In 16bit temper3 mode, each 40 bit temper data (32bit data+8bit meta data) is split into 2 chunks and each is stored in one of the buffers. The MSB part is stored into this buffer |

0x1AB90

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | R/W | 0 | lsb bank base reader. base address for frame buffer, should be word-aligned. This is used all the times temper is used.. In 16bit temper3 mode, each 40 bit temper data (32bit data+8bit meta data) is split into 2 chunks and each is stored in one of the buffers. The LSB part is stored into this buffer. |

0x1AB94

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:0 | R/W | 0x00001000 | Line offset. Indicates the offset in bytes from the start of one line to the next line. This value should be equal to or larger than one line of image data and should be word-aligned |

0x1AB98

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:2 | R/W | 0x00000002 | Reserved |
| 1 | R/W | | linetick eol. linetick start/end of line control. 0 = use start of line, 1 = use end of line |
| 0 | R/W | | Reserved |

0x1ABA0

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:16 | R/W | 0x00000040 | linetick repeat. line number of first linetick. 0 = no repeat |
| 15:0 | R/W | | linetick first. line number of first linetick. 0 = no linetick |

0x1ABA8

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:9 | R/W | 0x0F007E00 | Reserved |
| 8 | R/W | | writer axi id multi. 0= static value (axi_id_value) for awid/wid, 1 = incrementing value per transaction for awid/wid wrapping to 0 after axi_id_value |
| 7:4 | R/W | | lsb writer axi id value. value to send for awid, wid and expected on bid |
| 3:0 | R/W | | msb writer axi id value. value to send for awid, wid and expected on bid. |

0x1ABAC

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:8 | R/W | 0x0F007E00 | Reserved |
| 7:4 | R/W | | lsb reader axi id value. value to send for awid, wid and expected on bid. Good default = "0000" |
| 3:0 | R/W | | msb reader axi id value. value to send for awid, wid and expected on bid. Good default = "0000" |

ca correction**0x1ABB0**

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:6 | R/W | 0 | Reserved |
| 5:4 | R/W | 0 | Mesh Scale. extra shift of mesh data: 00- no shift, 01- shift left by 1, ..., 11- shift left by 3, used to increase the range at cost of accuracy |
| 3:1 | R/W | 0 | Reserved |
| 0 | R/W | 0 | Enable. module enable, if 0 the data $i(dw*(kh-1)/2+dw-1$ downto $dw*(kh-1)/2$ is presented at data_o after pipeline length |

0x1ABB4

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:23 | R/W | 0x00400040 | Reserved |
| 22:16 | R/W | | Mesh Height. number of tiles vertically. Maximum supported mesh height is 64 for RGGB sensor and 42 for RGBIr sensors. |
| 15:7 | R/W | | Reserved |
| 6:0 | R/W | | Mesh Width. number of tiles across. Maximum supported mesh width is 64. |

0x1ABB8

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:29 | R/W | 0x00400040 | Reserved |
| 28:16 | R/W | | Plane Offset. offset between colour planes, can differ from $line_offset*mesh_height$ |
| 15:13 | R/W | | Reserved |
| 12:0 | R/W | | Line Offset. offset between lines of tiles, can differ from $mesh_width$, but its safe to keep same as mesh width |

square be

sensor offset for the square module

0x1ABC0

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:16 | R/W | 0 | Reserved |
| 15:0 | R/W | 0 | black level in. input Data black level |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | black level out. output Data black level |

sensor offset pre shading

offset offset subtraction for each color channel and exposure

0x1ABC8

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | offset 00. offset offset for color channel 00 (R) |

0x1ABCC

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | offset 01. offset offset for color channel 01 (Gr) |

0x1ABD0

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | offset 10. offset offset for color channel 10 (Gb) |

0x1ABD4

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | offset 11. offset offset for color channel 10 (B) |

radial shading

Radial Lens shading correction

0x1ABD8

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:1 | R/W | 0 | Reserved |
| 0 | R/W | 0 | Enable. Lens shading correction enable: 0=off, 1=on |

0x1ABDC

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x021C03C0 | centerR y. Center y coordinate of the red shading map |
| 15:0 | R/W | | centerR x. Center x coordinate of the red shading map |

0x1ABE0

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:16 | R/W | 0x021C03C0 | centerG y. Center y coordinate of the green shading map |
| 15:0 | R/W | | centerG x. Center x coordinate of the green shading map |

0x1ABE4

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:16 | R/W | 0x021C03C0 | centerB y. Center y coordinate of the blue shading map |
| 15:0 | R/W | | centerB x. Center x coordinate of the blue shading map |

0x1ABE8

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x021C03C0 | centerIr y. Center y coordinate of the IR shading map |
| 15:0 | R/W | | centerIr x. Center x coordinate of the IR shading map |

0x1ABEC

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x06EA06EA | off center multRy. Normalizing Y factor which scales the Red radial table to the edge of the image. Calculated as $2^{31}/R^2$ where R is the furthest distance from the center coordinate to the edge of the image in pixels. |
| 15:0 | R/W | | off center multRx. Normalizing X factor which scales the Red radial table to the edge of the image. Calculated as $2^{31}/R^2$ where R is the furthest distance from the center coordinate to the edge of the image in pixels. |

0x1ABF0

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x06EA06EA | off center multGy. Normalizing Y factor which scales the green radial table to the edge of the image. Calculated as $2^{31}/R^2$ where R is the furthest distance from the center coordinate to the edge of the image in pixels |
| 15:0 | R/W | | off center multGx. Normalizing X factor which scales the green radial table to the edge of the image. Calculated as $2^{31}/R^2$ where R is the furthest distance from the center coordinate to the edge of the image in pixels. |

0x1ABF4

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:16 | R/W | 0x06EA06EA | off center multBy. Normalizing Y factor which scales the blue radial table to the edge of the image. Calculated as $2^{31}/R^2$ where R is the furthest distance from the center coordinate to the edge of the image in pixels. |
| 15:0 | R/W | | off center multBx. Normalizing X factor which scales the blue radial table to the edge of the image. Calculated as $2^{31}/R^2$ where R is the furthest distance from the center coordinate to the edge of the image in pixels. |

0x1ABF8

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x06EA06EA | off center multiRy. Normalizing Y factor which scales the lr radial table to the edge of the image. Calculated as $2^{31}/R^2$ where R is the furthest distance from the center coordinate to the edge of the image in pixels. |
| 15:0 | R/W | | off center multiRx. Normalizing X factor which scales the lr radial table to the edge of the image. Calculated as $2^{31}/R^2$ where R is the furthest distance from the center coordinate to the edge of the image in pixels. |

mesh shading

Mesh Lens shading correction

0x1ABFC

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:30 | R/W | 0x3F3FE406 | Reserved |
| 29:24 | R/W | | Mesh height. Number of vertical nodes minus 1 |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 23:22 | R/W | | Reserved |
| 21:16 | R/W | | Mesh width. Number of horizontal nodes minus 1 |
| 15:14 | R/W | | Mesh page Ir. Selects memory page for IR pixels correction. |
| 13:12 | R/W | | Mesh page B. Selects memory page for blue pixels correction. |
| 11:10 | R/W | | Mesh page G. Selects memory page for green pixels correction. |
| 9:8 | R/W | | Mesh page R. Selects memory page for red pixels correction. |
| 7 | R/W | | Reserved |
| 6:5 | R/W | | Mesh alpha mode. Sets alpha blending between mesh shading tables. 0 = no alpha blending; 1=2 banks (odd/even bytes) 2=4 banks (one per 8 bit lane in each dword) |
| 4:2 | R/W | | Mesh scale. Selects the precision and maximal gain range of mesh shading correction Gain range: 00- 0..2; 01- 0..4; 02- 0..8; 03- 0..16; 04- 1..2; 05- 1..3; 06- 1..5; 07- 1..9(float) |
| 1 | R/W | | Mesh show. Lens shading correction debug: 0=off, 1=on (show mesh data) |
| 0 | R/W | | Enable. Lens shading correction enable: 0=off, 1=on |

0x1AC04

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:12 | R/W | 0 | Reserved |
| 11:9 | R/W | 0 | Mesh alpha bank Ir. Bank selection for Ir blend: 0: 0+1; 1: 1+2; 2: 2:3; 3: 3+0; 4:0+2; 5: 1+3; 6,7: reserved |
| 8:6 | R/W | 0 | Mesh alpha bank B. Bank selection for B blend: 0: 0+1; 1: 1+2; 2: 2:3; 3: 3+0; 4:0+2; 5: 1+3; 6,7: reserved |
| 5:3 | R/W | 0 | Mesh alpha bank G. Bank selection for G blend: 0: 0+1; 1: 1+2; 2: 2:3; 3: 3+0; 4:0+2; 5: 1+3; 6,7: reserved: |
| 2:0 | R/W | 0 | Mesh alpha bank R. Bank selection for R blend: 0: 0+1; 1: 1+2; 2: 2:3; 3: 3+0; 4:0+2; 5: 1+3; 6,7: reserved |

0x1AC08

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | R/W | 0 | Mesh alpha Ir. Alpha blend coeff for IR |
| 23:16 | R/W | 0 | Mesh alpha B. Alpha blend coeff for B |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------------|
| 15:8 | R/W | 0 | Mesh alpha G. Alpha blend coeff for G |
| 7:0 | R/W | 0 | Mesh alpha R. Alpha blend coeff for R |

0x1AC0C

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:16 | R/W | 0x00001000 | Reserved |
| 15:0 | R/W | | Mesh strength. Mesh strength in 4.12 format, e.g. 0 - no correction, 4096 - correction to match mesh data. Can be used to reduce shading correction based on AE. |

white balance

Static white balance - independent gain for each color channel

0x1AC10

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:28 | R/W | 0x01000100 | Reserved |
| 27:16 | R/W | | Gain 01. Multiplier for color channel 01 (Gr) Format: unsigned 4.8-bit fixed-point |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | Gain 00. Multiplier for color channel 00 (R) Format: unsigned 4.8-bit fixed-point |

0x1AC14

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:28 | R/W | 0x01000100 | Reserved |
| 27:16 | R/W | | Gain 11. Multiplier for color channel 11 (B) Format: unsigned 4.8-bit fixed-point |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | Gain 10. Multiplier for color channel 10 (Gb) Format: unsigned 4.8-bit fixed-point |

white balance aexp**0x1AC18**

| Bit(s) | R/W | Default | Description |

iridix gain

Digital gain for RAW sensor data

0x1AC20

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:12 | R/W | 0x00000100 | Reserved |
| 11:0 | R/W | | Gain. Gain applied to data in 4.8 format |

0x1AC24

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | Offset. Data black level |

iridix

Iridix is an adaptive, space-variant tone mapping engine.

It is used to maintain or enhance shadow detail while preserving highlights.

0x1AC28

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x00004629 | Reserved |
| 15:14 | R/W | | stat mult |
| 13:7 | R/W | | Reserved |
| 6 | R/W | | postgamma pos. PosGamma application 0=gain 1=data |
| 5 | R/W | | black level amp0. 1=Ignore Black level (set to zero) in amplifier. 0=Use Black level value. |
| 4 | R/W | | Reserved |
| 3 | R/W | | max alg type. Max Bayer Algorithm Type. |
| 2:1 | R/W | | Reserved |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------------------|
| 0 | R/W | | iridix on. Iridix enable: 0=off 1=on |

0x1AC2C

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:24 | R/W | 0x00408012 | Reserved |
| 13:16 | R/W | | slope min. Restricts the minimum slope (gain) which can be generated by the adaptive algorithm |
| 15:8 | R/W | | slope max. Restricts the maximum slope (gain) which can be generated by the adaptive algorithm |
| 7:4 | R/W | | variance intensity. Sets the degree of luminance sensitivity of the algorithm(Irdx7F) |
| 3:0 | R/W | | variance space. Sets the degree of spatial sensitivity of the algorithm(Irdx7F) |

0x1AE84

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:28 | R/W | 0x00A00131 | Reserved |
| 27:16 | R/W | | AA Thresh. Threshold for the range of angular (45/135) blending. The threshold defines the difference of 45 and 135 gradients at which the 45 gradient will start to be taken into account in the blending (if AA Offset is set to 0). Setting the offset not null (or the slope low) will include proportion of the 45 gradient in the blending before even the gradient difference reaches the threshold (see AA Offset for more details). |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | VH Thresh. Threshold for the range of vertical/horizontal blending The threshold defines the difference of vertical and horizontal gradients at which the vertical gradient will start to be taken into account in the blending (if VH Offset is set to 0). Setting the offset not null (or the slope low) will include proportion of the vertical gradient in the blending before even the gradient difference reaches the threshold (see VH Offset for more details). |

0x1AE88

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:28 | R/W | 0x01710070 | Reserved |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | offset g. Offset subtracted from the G channel |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | offset r. Offset subtracted from the R channel |

0x1C074

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | offset b. Offset subtracted from the B channel |

fr sharpen

Sharpen

Luma transform red coefficient. u0.8

Luma transform blue coefficient. u0.8

0x1C078

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:1 | R/W | 0 | Reserved |
| 0 | R/W | 0 | Enable. Sharpening enable: 0=off, 1=on |

0x1C07C

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:9 | R/W | 0x00000010 | Reserved |
| 8:0 | R/W | | Strength. Controls strength of sharpening effect. u5.4 |

0x1C080

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:24 | R/W | 0x00131E4C | Reserved |
| 23:16 | R/W | | Alpha Undershoot. Alpha blending of undershoot and overshoot u0.7, 0 = only undershoot, 255 = only overshoot |
| 15:8 | R/W | | Control B |
| 7:0 | R/W | | Control R |

0x1C084

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | R/W | 0 | Reserved |
| 23:16 | R/W | 0 | Luma Offset Low. Luma offset (min value) of thre region of less than Luma Thresh Low. |
| 15:8 | R/W | 0 | Reserved |
| 7:0 | R/W | 0 | Luma Thresh Low. Luma threshold below this value, no sharpening will be applied. |

0x1C088

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:26 | R/W | 0x033203FC | Reserved |
| 25:16 | R/W | | Luma Thresh High. Luma threshold above this value, sharpening level will be decreased. |
| 15:0 | R/W | | Luma Slope Low. Luma linear threshold slope at dark luminance region |

0x1C08C

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x06A40000 | Luma Slope High. Luma linear threshold slope at bright luminance region |
| 15:8 | R/W | | Reserved |
| 7:0 | R/W | | Luma Offset High. Luma offset (min value) of thre region of more than Luma Thresh High. |

0x1C090

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:30 | R/W | 0x00CD3FFF | Reserved |
| 29:16 | R/W | | Clip Str Min. clips sharpening mask of min value. This will control undershoot. U0.14. It is used as negative value. (0 ~ -16383) |
| 15:14 | R/W | | Reserved |
| 13:0 | R/W | | Clip Str Max. clips sharpening mask of max value. This will control overshoot. U0.14. (0 ~ 16383) |

0x1C094

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:4 | R/W | 0 | Reserved |
| 3:0 | R/W | 0 | Debug. To support different debug output. 0 = normal operation, 1 = luma, 2 = sharpening mask |

fr cs conv

Conversion of RGB to YUV data using a 3x3 color matrix plus offsets

0x1C098

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:4 | R/W | 0 | Reserved |
| 3 | R/W | 0 | Enable vertical downsample. Vertical Downsampling Enable: 0=off 1=on |
| 2 | R/W | 0 | Enable horizontal downsample. Horizontal Downsampling Enable: 0=off 1=on |
| 1 | R/W | 0 | Enable filter. Filter enable: 0=off 1=on |
| 0 | R/W | 0 | Enable matrix. Color matrix enable: 0=off 1=on |

0x1C09C

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:16 | R/W | 0x0000002F | Reserved |
| 15:0 | R/W | | Coefft 11. Matrix coefficient for R-Y multiplier. Format: sign/magnitude 8.8-bit fixed-point |

0x1C0A0

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:16 | R/W | 0x0000009D | Reserved |
| 15:0 | R/W | | Coefft 12. Matrix coefficient for G-Y multiplier. Format: sign/magnitude 8.8-bit fixed-point |

| 31:10 | R/W | 0 | Reserved |
| 9:0 | R/W | 0 | Clip min UV. Minimal value for Cb, Cr. Values below this are clipped. Format: signed (2's complement) 10-bit integer |

0x1C0D8

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:10 | R/W | 0x000003FF | Reserved |
| 9:0 | R/W | | Clip max UV. Maximal value for Cb, Cr. Values above this are clipped. Format: signed (2's complement) 10-bit integer |

0x1C0DC

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:10 | R/W | 0x000003FF | Reserved |
| 9:0 | R/W | | Data mask RY. Data mask for channel 1 (R or Y). Bit-wise and of this value and video data. |

0x1C0E0

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:10 | R/W | 0x000003FF | Reserved |
| 9:0 | R/W | | Data mask GU. Data mask for channel 2 (G or U). Bit-wise and of this value and video data. |

0x1C0E4

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:10 | R/W | 0x000003FF | Reserved |
| 9:0 | R/W | | Data mask BV. Data mask for channel 3 (B or V). Bit-wise and of this value and video data. |

fr cs conv dither**0x1C0E8**

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:5 | R/W | 0 | Reserved |
| 4 | R/W | 0 | Shift mode. 0= output is LSB aligned; 1=output is MSB aligned |
| 3 | R/W | 0 | Reserved |
| 2:1 | R/W | 0 | Dither amount. 0= dither to 9 bits; 1=dither to 8 bits; 2=dither to 7 bits; 3=dither to 6 bits |
| 0 | R/W | 0 | Enable dither. Enables dithering module |

fr dma writer

DMA writer controls

0x1C0EC

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:12 | R/W | 0 | Reserved |
| 11 | R/W | 0 | axi xact comp. 0 = dont wait for axi transaction completion at end of frame(just all transfers accepted). 1 = wait for all transactions completed |
| 10 | R/W | 0 | Reserved |
| 9 | R/W | 0 | frame write on. 0 = no frames written(when switched from 1, current frame completes writing before stopping), 1= write frame(s) (write single or continous frame(s)) |
| 8 | R/W | 0 | Reserved |
| 7:6 | R/W | 0 | Plane select. Plane select for planar base modes. Only used if planar outputs required. Not used. Should be set to 0 |
| 5 | R/W | 0 | Reserved |
| 4:0 | R/W | 0 | Base mode. Base DMA packing mode for RGB/RAW/YUV etc |

0x1C0F0

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:16 | R/W | 0x04380780 | active height. Active video height in lines 128-8000 |
| 15:0 | R/W | | active width. Active video width in pixels 128-8000 |

0x1C0F4

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | 0 | bank0 base. bank 0 base address for frame buffer, should be word-aligned |

0x1C0F8

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | 0 | Bank1 base. bank 1 base address for frame buffer, should be word-aligned |

0x1C0FC

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | 0 | Bank2 base. bank 2 base address for frame buffer, should be word-aligned |

0x1C100

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | 0 | Bank3 base. bank 2 base address for frame buffer, should be word-aligned |

0x1C104

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | 0 | Bank4 base. bank 4 base address for frame buffer, should be word-aligned |

0x1C108

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:3 | R/W | 0 | Reserved |
| 2:0 | R/W | 0 | max bank. highest bank*_base to use for frame writes before recycling to bank0_base, only 0 to 4 are valid |

0x1C10C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31:0 | R/W | 0 | Line offset |

0x1C110

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:4 | RO | - | Reserved |
| 3:1 | RO | | wbank curr. write bank currently active. valid values =0-4. updated at start of frame write |
| 0 | RO | | wbank active. 1 = wbank_curr is being written to. Goes high at start of writes, low at last write transfer/completion on axi. |

0x1C11C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:16 | RO | - | frame wcount. count of outgoing frame writes (starts) from vdma_writer sent to AXI output, non resetable, rolls over, updates at pixel 1 of new frame on video in |
| 15:0 | RO | | frame icount. count of incoming frames (starts) to vdma_writer on video input, non resetable, rolls over, updates at pixel 1 of new frame on video in |

0x1C124

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:9 | RO | - | Reserved |
| 8 | RO | - | video alarm. active high, problem found on video port(s) (active width/height or interline/frame blanks failure) |
| 7 | RO | - | vi fail interframe blanks. clearable alarm, high to indicate interframe blanking below min |
| 6 | RO | - | vi fail interline blanks. clearable alarm, high to indicate interline blanking below min |
| 5 | RO | - | vi fail active height. clearable alarm, high to indicate mismatched active_height detected (also raised on missing field!) |
| 4 | RO | - | vi fail active width. clearable alarm, high to indicate mismatched active_width detected |
| 3 | RO | - | axi fail wxact_ostand. clearable alarm, high when wxact_ostand_limit reached |
| 2 | RO | - | axi fail wmaxwait. clearable alarm, high when wmaxwait_limit reached |
| 1 | RO | - | axi fail awmaxwait. clearable alarm, high when awmaxwait_limit reached |
| 0 | RO | - | axi fail bresp. clearable alarm, high to indicate bad bresp captured |

0x1C128

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | RO | - | blk status. block status output (reserved) - blk_status(0) = wfifo_fail_full - blk_status(1) = wfifo_fail_empty - blk_status(4) = pack_fail_overflow - blk_status(24) = intw_fail_user_intf_sig - blk_status(others) = zero |

0x1C12C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:16 | R/W | 0 | Reserved |
| 15:0 | R/W | 0 | lines wrapped. Number of lines to write from base address before wrapping back to base address. 0 = no wrapping, >0 = last line written before wrapping |

0x1C130

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:16 | R/W | 0 | Reserved |
| 15:0 | R/W | 0 | linetick first. Line number of first linetick. 0 = no linetick, >0 = line number to generate linetick |

0x1C134

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:16 | R/W | 0 | Reserved |
| 15:0 | R/W | 0 | linetick repeat. Line repeat interval of linetick. 0 = no repeat, >0 = repeat interval in lines |

0x1C138

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:16 | R/W | 0 | linetick delay. Linetick delay in vcke cycles to add to min 3 cycle latency from acl_vi. 0-65535. Must be less than next linetick generation time or count will not mature and no linetick is not produced. Note: <i>linetick delay can run past end of frame/field and also into next frame!</i> <ul style="list-style-type: none"> • Take care maturity time is less than next configured linetick generation position! • Take care when changing config between frame too! |
| 15:1 | R/W | 0 | Reserved |
| 0 | R/W | 0 | linetick eol. Linetick start/end of line control. 0 = use start of line, 1 = use end of line to generate linetick |

0x1C13C

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:2 | R/W | 0x0F000F0C | Reserved |
| 1 | R/W | | axi id multi. 0= static value (axi_id_value) for awid/wid, 1 = incrementing value per transaction for awid/wid wrapping to 0 after axi_id_value |
| 0 | R/W | | Reserved |

0x1C140

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:4 | R/W | 0 | Reserved |
| 3:0 | R/W | 0 | axi id value. value to send for awid, wid and expected on bid. Good default = 0000 |

fr uv dma writer

DMA writer controls

0x1C144

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:12 | R/W | 0 | Reserved |
| 11 | R/W | 0 | axi xact comp. 0 = dont wait for axi transaction completion at end of frame(just all transfers accepted). 1 = wait for all transactions completed |
| 10 | R/W | 0 | Reserved |
| 9 | R/W | 0 | frame write on. 0 = no frames written(when switched from 1, current frame completes writing before stopping), 1= write frame(s) (write single or continuous frame(s)) |
| 8 | R/W | 0 | Reserved |
| 7:6 | R/W | 0 | Plane select. Plane select for planar base modes. Only used if planar outputs required. Not used. Should be set to 0 |
| 5 | R/W | 0 | Reserved |
| 4:0 | R/W | 0 | Base mode. Base DMA packing mode for RGB/RAW/YUV etc |

0x1C148

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:16 | R/W | 0x04380780 | active height. Active video height in lines 128-8000 |
| 15:0 | R/W | | active width. Active video width in pixels 128-8000 |

0x1C14C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | 0 | bank0 base. bank 0 base address for frame buffer, should be word-aligned |

0x1C150

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | 0 | Bank1 base. bank 1 base address for frame buffer, should be word-aligned |

0x1C154

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | 0 | Bank2 base. bank 2 base address for frame buffer, should be word-aligned |

0x1C158

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | 0 | Bank3 base. bank 3 base address for frame buffer, should be word-aligned |

0x1C15C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | 0 | Bank4 base. bank 4 base address for frame buffer, should be word-aligned |

0x1C160

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:3 | R/W | 0 | Reserved |
| 2:0 | R/W | 0 | max bank. highest bank*_base to use for frame writes before recycling to bank0_base, only 0 to 4 are valid |

0x1C164

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | R/W | 0 | Line offset. Indicates the offset in bytes from the start of one line to the next line. This value should be equal to or larger than one line of image data and should be word-aligned |

0x1C168

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:4 | RO | - | Reserved |
| 3:1 | RO | - | wbank curr. write bank currently active. valid values =0-4. updated at start of frame write |
| 0 | RO | - | wbank active. 1 = wbank_curr is being written to. Goes high at start of writes, low at last write transfer/completion on axi. |

0x1C174

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:16 | RO | - | frame wcount. count of outgoing frame writes (starts) from vdma_writer sent to AXI output, non resettable, rolls over, updates at pixel 1 of new frame on video in |
| 15:0 | RO | - | frame icount. count of incoming frames (starts) to vdma_writer on video input, non resettable, rolls over, updates at pixel 1 of new frame on video in |

0x1C17C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:9 | RO | - | Reserved |
| 8 | RO | - | video alarm. active high, problem found on video port(s) (active width/height or interline/frame blanks failure) |
| 7 | RO | - | vi fail interframe blanks. clearable alarm, high to indicate interframe blanking below min |
| 6 | RO | - | vi fail interline blanks. clearable alarm, high to indicate interline blanking below min |
| 5 | RO | - | vi fail active height. clearable alarm, high to indicate mismatched active_height detected (also raised on missing field!) |
| 4 | RO | - | vi fail active width. clearable alarm, high to indicate mismatched active_width detected |
| 3 | RO | - | axi fail wxact ostand. clearable alarm, high when wxact_ostand_limit reached |
| 2 | RO | - | axi fail wmaxwait. clearable alarm, high when wmaxwait_limit reached |
| 1 | RO | - | axi fail awmaxwait. clearable alarm, high when awmaxwait_limit reached |
| 0 | RO | - | axi fail bresp. clearable alarm, high to indicate bad bresp captured |

0x1C180

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | RO | - | blk status. block status output (reserved) - blk_status(0) = wfifo_fail_full - blk_status(1) = wfifo_fail_empty - blk_status(4) = pack_fail_overflow - blk_status(24) = intw_fail_user_intf_sig - blk_status(others) = zero |

0x1C184

ds gamma rgb

Gamma correction

0x1C1D8

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|----------------------------------|
| 31:1 | R/W | 0x00000001 | Reserved |
| 0 | R/W | | Enable. Gamma enable: 0=off 1=on |

0x1C1DC

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:28 | R/W | 0x01000100 | Reserved |
| 27:16 | R/W | | gain g. gain applied to the G channel in 4.8 format |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | gain r. gain applied to the R channel in 4.8 format |

0x1C1E0

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x00000100 | Reserved |
| 15:0 | R/W | | gain b. gain applied to the B channel in 4.8 format |

0x1C1E4

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | offset g. Offset subtracted from the G channel |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | offset r. Offset subtracted from the R channel |

0x1C1E8

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | offset b. Offset subtracted from the B channel |

ds sharpen

Sharpen

Luma transform red coefficient. u0.8

Luma transform blue coefficient. u0.8

0x1C1EC

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:1 | R/W | 0 | Reserved |
| 0 | R/W | 0 | Enable. Sharpening enable: 0=off, 1=on |

0x1C1F0

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:9 | R/W | 0x00000010 | Reserved |
| 8:0 | R/W | | Strength. Controls strength of sharpening effect. u5.4 |

0x1C1F4

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:24 | R/W | 0x00131E4C | Reserved |
| 23:16 | R/W | | Alpha Undershoot. Alpha blending of undershoot and overshoot u0.7, 0 = only undershoot, 255 = only overshoot |
| 15:8 | R/W | | Control B |
| 7:0 | R/W | | Control R |

0x1C1F8

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | R/W | 0 | Reserved |
| 23:16 | R/W | 0 | Luma Offset Low. Luma offset (min value) of thre region of less than Luma Thresh Low. |
| 15:10 | R/W | 0 | Reserved |
| 9:0 | R/W | 0 | Luma Thresh Low. Luma threshold below this value, no sharpening will be applied. |

0x1C1FC

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:26 | R/W | 0x033203FC | Reserved |
| 25:16 | R/W | | Luma Thresh High. Luma threshold above this value, sharpening level will be decreased. |
| 15:0 | R/W | | Luma Slope Low. Luma linear threshold slope at dark luminance region |

0x1C200

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x06A40000 | Luma Slope High. Luma linear threshold slope at bright luminance region |
| 15:8 | R/W | | Reserved |
| 7:0 | R/W | | Luma Offset High. Luma offset (min value) of thre region of more than Luma Thresh High. |

0x1C204

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:30 | R/W | 0x00CD3FFF | Reserved |
| 29:16 | R/W | | Clip Str Min. clips sharpening mask of min value. This will control undershoot. U0.14. It is used as negative value. (0 ~ -16383) |
| 15:14 | R/W | | Reserved |
| 13:0 | R/W | | Clip Str Max. clips sharpening mask of max value. This will control overshoot. U0.14. (0 ~ 16383) |

0x1C208

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:4 | R/W | 0 | Reserved |
| 3:0 | R/W | 0 | Debug. To support different debug output. 0 = normal operation, 1 = luma, 2 = sharpening mask |

ds cs conv

Conversion of RGB to YUV data using a 3x3 color matrix plus offsets

0x1C20C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:4 | R/W | 0 | Reserved |
| 3 | R/W | 0 | Enable vertical downsample |

ds cs conv dither**0x1C25C**

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:5 | R/W | 0 | Reserved |
| 4 | R/W | 0 | Shift mode. 0= output is LSB aligned; 1=output is MSB aligned |
| 3 | R/W | 0 | Reserved |
| 2:1 | R/W | 0 | Dither amount. 0= dither to 9 bits; 1=dither to 8 bits; 2=dither to 7 bits; 3=dither to 6 bits |
| 0 | R/W | 0 | Enable dither. Enables dithering module |

ds dma writer

DMA writer controls

0x1C260

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:12 | R/W | 0 | Reserved |
| 11 | R/W | 0 | axi xact comp. 0 = dont wait for axi transaction completion at end of frame(just all transfers accepted). 1= wait for all transactions completed |
| 10 | R/W | 0 | Reserved |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 9 | R/W | 0 | frame write on. 0 = no frames written(when switched from 1, current frame completes writing before stopping), 1= write frame(s) (write single or continous frame(s)) |
| 8 | R/W | 0 | Reserved |
| 7:6 | R/W | 0 | Plane select. Plane select for planar base modes. Only used if planar outputs required. Not used. Should be set to 0 |
| 5 | R/W | 0 | Reserved |
| 4:0 | R/W | 0 | Base mode. Base DMA packing mode for RGB/RAW/YUV etc |

0x1C264

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:16 | R/W | 0x04380780 | active height. Active video height in lines 128-8000 |
| 15:0 | R/W | | active width. Active video width in pixels 128-8000 |

0x1C268

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | 0 | bank0 base. bank 0 base address for frame buffer, should be word-aligned |

0x1C26C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | 0 | Bank1 base. bank 1 base address for frame buffer, should be word-aligned |

0x1C270

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | 0 | Bank2 base. bank 2 base address for frame buffer, should be word-aligned |

0x1C274

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | 0 | Bank3 base. bank 3 base address for frame buffer, should be word-aligned |

0x1C278

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | 0 | Bank4 base. bank 4 base address for frame buffer, should be word-aligned |

0x1C27C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:3 | R/W | 0 | Reserved |
| 2:0 | R/W | 0 | max bank. highest bank*_base to use for frame writes before recycling to bank0_base, only 0 to 4 are valid |

0x1C280

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:0 | R/W | 0x00001000 | Line offset. Indicates the offset in bytes from the start of one line to the next line. This value should be equal to or larger than one line of image data and should be word-aligned |

0x1C284

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:4 | RO | - | Reserved |
| 3:1 | RO | - | wbank curr. write bank currently active. valid values =0-4. updated at start of frame write |
| 0 | RO | - | wbank active. 1 = wbank_curr is being written to. Goes high at start of writes, low at last write transfer/completion on axi. |

0x1C290

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:16 | RO | - | frame wcount. count of outgoing frame writes (starts) from vdma_writer sent to AXI output, non resettable, rolls over, updates at pixel 1 of new frame on video in |
| 15:0 | RO | - | frame icount. count of incoming frames (starts) to vdma_writer on video input, non resettable, rolls over, updates at pixel 1 of new frame on video in |

0x1C298

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:9 | RO | - | Reserved |
| 8 | RO | - | video alarm. active high, problem found on video port(s) (active width/height or interline/frame blanks failure) |
| 7 | RO | - | vi fail interframe blanks. clearable alarm, high to indicate interframe blanking below min |
| 6 | RO | - | vi fail interline blanks. clearable alarm, high to indicate interline blanking below min |
| 5 | RO | - | vi fail active height. clearable alarm, high to indicate mismatched active_height detected (also raised on missing field!) |
| 4 | RO | - | vi fail active width. clearable alarm, high to indicate mismatched active_width detected |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 3 | RO | - | axi fail wxact ostand. clearable alarm, high when wxact_ostand_limit reached |
| 2 | RO | - | axi fail wmaxwait. clearable alarm, high when wmaxwait_limit reached |
| 1 | RO | - | axi fail awmaxwait. clearable alarm, high when awmaxwait_limit reached |
| 0 | RO | - | axi fail bresp. clearable alarm, high to indicate bad bresp captured |

0x1C29C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | RO | - | blk status. block status output (reserved) - blk_status(0) = wfifo_fail_full - blk_status(1) = wfifo_fail_empty - blk_status(4) = pack_fail_overflow - blk_status(24) = intw_fail_user_intfc_sig - blk_status(others) = zero |

multi ctx**0x1C310**

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:1 | R/W | 0 | Reserved |
| 0 | R/W | 0 | Config done. This signal is only required in multi-context mode Once configuration for ping/pong address space is done, MCU must write 1 into this address. This register is self-clearing. So the read-back will be 0 |

METERING_STATS_PONG_MEM Array

This is an array of 6575 32-bit registers. The address for element (i) is: 0x1C470 + 4i.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x1C470 | 31:0 | R/W | - | Data(0) |
| 0x1C474 | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x22B28 | 31:0 | R/W | - | Data(6574) |

DECOMPANDER0_PONG_MEM Array

This is an array of 33 32-bit registers. The address for element (i) is: 0x22B2C + 4i.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x22B2C | 31:0 | R/W | - | Data(0) |
| 0x22B30 | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x22BAC | 31:0 | R/W | - | Data(32) |

DECOMPANDER1_PONG_MEM Array

This is an array of 257 32-bit registers. The address for element (i) is: $0x22BB0 + 4i$.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x22BB0 | 31:0 | R/W | - | Data(0) |
| 0x22BB4 | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x22FB0 | 31:0 | R/W | - | Data(256) |

DPC_PONG_MEM

The content of the memory is {y-coord[11:0], x-coord[12:0]}. Physical memory width is 25bits. the top-left corner of the frame is indicated by {1,1}.

Array

This is an array of 4096 32-bit registers. The address for element (i) is: $0x22FB4 + 4i$.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x22FB4 | 31:0 | R/W | - | Data(0) |
| 0x22FB8 | 31:0 | R/W | - | Data(1) |

CA_CORRECTION_FILTER_PONG_MEM

Chromatic aberration correction polyphase filter lookup table, 32 entries of 32 bits each. Each entry address corresponds to fractional part of the pixel displacement.

Each entry is four 8-bit filter coefficients in fix point format.

- Codes 0...128 correspond to values 0.0 ... 1.0 (with resolution 1/128)
- Codes 129...191 correspond to values 129/128 ... 191/128
- Codes 192...255 correspond to values -64/128 ... -1/128

Array

This is an array of 32 32-bit registers. The address for element (i) is: $0x26FB4 + 4i$.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x26FB4 | 31:0 | R/W | - | Data(0) |
| 0x26FB8 | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x27030 | 31:0 | R/W | - | Data(31) |

CA_CORRECTION_MESH_PONG_MEM

Chromatic aberration correction coordinate lookup table, 8192 entries for tile displacement of 16 bits each. Each entry is 16 bits, 8 LSBs is X displacement of the tile and 8 MSBs is Y displacement. The coordinates are coded as two's complement, 3.5 fixed point.

Array

This is an array of 4096 32-bit registers. The address for element (i) is: $0x27034 + 4i$.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x27034 | 31:0 | R/W | - | Data(0) |
| 0x27038 | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x2B030 | 31:0 | R/W | - | Data(4095) |

MESH_SHADING_PONG_MEM Array

This is an array of 4096 32-bit registers. The address for element (i) is: $0x2B034 + 4i$.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x2B034 | 31:0 | R/W | 0 | Data(0) |
| 0x2B038 | 31:0 | R/W | 0 | Data(1) |
| ...repeated until ... | | | | |
| 0x2F030 | 31:0 | R/W | 0 | Data(4095) |

RADIAL_SHADING_PONG_MEM

4 banks of radial shading lookup tables - for R,G,B,Ir channels. The banks start at the addresses 0, 256, 512, 768.

Each bank has 129 entries for piecewise linear table, each entry occupies 32 bits, of which 16 least significant bits are encoding shading correction factor in 4.12 fix point format.

Array

This is an array of 897 32-bit registers. The address for element (i) is: $0x2F034 + 4i$.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x2F034 | 31:0 | R/W | - | Data(0) |
| 0x2F038 | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x2FE34 | 31:0 | R/W | - | Data(896) |

IRIDIX_RP_PONG_MEM Array

This is an array of 129 32-bit registers. The address for element (i) is: $0x2FE38 + 4i$.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x2FE38 | 31:0 | R/W | - | Data(0) |
| 0x2FE3C | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x30038 | 31:0 | R/W | - | Data(128) |

IRIDIX_FP1_PONG_MEM Array

This is an array of 129 32-bit registers. The address for element (i) is: $0x3003C + 4i$.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x3003C | 31:0 | R/W | - | Data(0) |
| 0x30040 | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x3023C | 31:0 | R/W | - | Data(128) |

FR_GAMMA_RGB_PONG_MEM Array

This is an array of 129 32-bit registers. The address for element (i) is: $0x30240 + 4i$.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x30240 | 31:0 | R/W | - | Data(0) |
| 0x30244 | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x30440 | 31:0 | R/W | - | Data(128) |

DS_GAMMA_RGB_PONG_MEM Array

This is an array of 129 32-bit registers. The address for element (i) is: $0x30444 + 4i$.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x30444 | 31:0 | R/W | - | Data(0) |
| 0x30448 | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x30644 | 31:0 | R/W | - | Data(128) |

LUMVAR_STATS_PONG_MEM

This is an array of 512 32-bit registers. The address for element (i) is: $0x30648 + 4i$.

| Address | Bit(s) | R/W | Default | Description |
|-----------------------|--------|-----|---------|-------------|
| 0x30648 | 31:0 | R/W | - | Data(0) |
| 0x3064C | 31:0 | R/W | - | Data(1) |
| ...repeated until ... | | | | |
| 0x30E44 | 31:0 | R/W | - | Data(511) |

ISP_CONFIG_PONG (SINGLE_CONTEXT_CONFIG)

Top

Miscellaneous top-level ISP controls

0x30E48

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:16 | R/W | 0 | Active Height. Active video height in lines |
| 15:0 | R/W | 0 | Active Width. Active video width in pixels |

| 13:0 | R/W | | rect top. Rectangle bottom line number 1-n |

0x30F54

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:30 | R/W | 0x01000001 | Reserved |
| 29:16 | R/W | | rect right. Rectangle right pixel number 1-n |
| 15:14 | R/W | | Reserved |
| 13:0 | R/W | | rect left. Rectangle left pixel number 1-n |

input formatter

Adapts received data format to ISP format. See following table of setting to be used for various sensors/modes.

| Sensor mode | Description |
|--|--|
| Linear data | Up to 20 bits and MSB aligned. |
| Sensor companded data | Up to 16 bits and MSB aligned. |
| 3-2 exposures wdr: 16bit Linear + 12bit VS | Supported companded data widths are: 8, 10, 12, 14, 16 |

| | |
|---|------------------------|
| 3-2 exposures wdr: 12bit companded + 12bit VS | OV2770 or equivalent. |
| 3:2 mux mode | OV10640 3:2 mux mode |
| 16-bit log mode | OV10640 16bit log mode |

0x30F58

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:19 | R/W | 0x00020000 | Reserved |
| 18:16 | R/W | | input bitwidth select. Input bitwidth select 0 = 8 bits 1 = 10 bits 2 = 12 bits 3 = 14 bits 4 = 16 bits 5 = 20 bits (no 18 bits) 6 = Reserved 7 = Reserved |
| 15:3 | R/W | | Reserved |
| 2:0 | R/W | | mode in. Input mode 0 = Linear data 1 = 2:3 multiple exposure multiplexing 2 = Logarithmic encoding 3 = Companding curve with knee points 4 = 16bit linear+ 12bit VS 5 = 12bit companded + 12bit VS 6 = Reserved 7 = pass through mode |

0x30F5C

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:18 | R/W | 0x00010000 | Reserved |
| 17:0 | R/W | | factor ML. 18 bit, 6.12 fix point - ratio between long and medium exposure for 2:3 multiplexed mode |

0x30F60

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:13 | R/W | 0x00010000 | Reserved |
| 12:0 | R/W | | factor MS. 13 bit, 1.12 fix point - ratio between short and medium exposure for 2:3 multiplexed mode |

0x30F64

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | black level. Black level of sensor data for 2:3 multiplexed mode |

0x30F68

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--------------------------------|
| 31:16 | R/W | 0x05800200 | knee point1. Second knee point |
| 15:0 | R/W | | knee point0. First knee point |

0x30F6C

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|-------------------------------|
| 31:16 | R/W | 0x00000881 | Reserved |
| 15:0 | R/W | | knee point2. Third knee point |

0x30F70

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:28 | R/W | 0x09060402 | Reserved |
| 27:24 | R/W | | slope3 select. Last slope for companding table segments (encoding is the same as slope0 select) |
| 23:20 | R/W | | Reserved |
| 19:16 | R/W | | Slope2 select. Third slope for companding table segments (encoding is the same as slope0 select) |
| 15:12 | R/W | | Reserved |
| 11:8 | R/W | | Slope1 select. Second slope for companding table segments (encoding is the same as slope0 select) |
| 7:4 | R/W | | Reserved |
| 3:0 | R/W | | slope0 select. First slope for companding table segments |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| | | | 0 = 1x 1 = 2x 2 = 4x 3 = 8x 4 = 16x 5 = 32x 6 = 64x 7 = 128x 8 = 256x 9 = 512x 10 = 1024x 11 = 2048x 12 = 4096x 13 = 8192x 14 = 16384x 15 = 32768x |

sensor offset wdr l

offset offset subtraction for each color channel and exposure

0x30F74

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | offset 01. offset offset for color channel 01 (Gr) |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | offset 00. offset offset for color channel 00 (R) |

0x30F78

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | offset 11. offset offset for color channel 11 (B) |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | offset 10. offset offset for color channel 10 (Gb) |

sensor offset wdr m

offset offset subtraction for each color channel and exposure

0x30F7C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | Offset 01. offset offset for color channel 01 (Gr) |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | offset 00. offset offset for color channel 00 (R) |

0x30F80

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | Offset 11. offset offset for color channel 11 (B) |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | offset 10. offset offset for color channel 10 (Gb) |

sensor offset wdr s

offset offset subtraction for each color channel and exposure

0x30F84

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | Offset 01. offset offset for color channel 01 (Gr) |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | offset 00. offset offset for color channel 00 (R) |

0x30F88

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | Offset 11. offset offset for color channel 11 (B) |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | offset 10. offset offset for color channel 10 (Gb) |

sensor offset wdr vs

offset offset subtraction for each color channel and exposure

0x30F8C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | Offset 01. offset offset for color channel 01 (Gr) |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | offset 00. offset offset for color channel 00 (R) |

0x30F90

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | Offset 11. offset offset for color channel 11 (B) |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | offset 10. offset offset for color channel 10 (Gb) |

gain wdr

Gain adjustment for the WDR stitching

0x30F94

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:29 | R/W | 0x01000100 | Reserved |
| 28:16 | R/W | | Gain m. Gain applied to ch-medium data in 5.8 format |
| 15:13 | R/W | | Reserved |
| 12:0 | R/W | | Gain l. Gain applied to ch-long data in 5.8 format |

0x30F98

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:29 | R/W | 0x01000100 | Reserved |
| 28:16 | R/W | | Gain vs. Gain applied to ch-vs data in 5.8 format |
| 15:13 | R/W | | Reserved |
| 12:0 | R/W | | Gain s. Gain applied to ch-short data in 5.8 format |

0x30F9C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | black level m. Sensor offset applied to ch-medium data |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | black level l. Sensor offset applied to ch-long data |

0x30FA0

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | black level vs. Sensor offset applied to ch-veryshort data |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | black level s. Sensor offset applied to ch-short data |

frame stitch

4-exposure wide-dynamic-range blending

NOTE:

If the WDR is configured to stitch 2 exposures, then the configuration must be done through the LM_ pair the short exposures black level must be programmed through the med_black_level register so that the LM pair can be used.

0x30FA4

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:16 | R/W | 0 | Reserved |
| 15:8 | R/W | 0 | output select. This register is only for debug purpose. for normal operation it must be kept in its default value (0) 0 : normal stitched output 1 : long data routed out 2 : medium data routed out 4 : short data routed out 8 : very short data routed out 16: LM stitched output taken out 32: MS stitched output taken out 64: SVS stitched output taken out others: reserved |
| 7:2 | R/W | 0 | Reserved |
| 1:0 | R/W | 0 | mode in. 0 : 4-exposure 1 : 2-exposure 2 : 3-exposure 3 : 4-exposure |

0x30FA8

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:28 | R/W | 0x01000100 | Reserved |
| 27:16 | R/W | | MS Exposure Ratio. Sets ratio between medium and short exposures - this must match the actual exposure ratio on the sensor Format: unsigned 6.6-bit fixed-point |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | LM Exposure Ratio. Sets ratio between long and medium exposures - this must match the actual exposure ratio on the sensor Format: unsigned 6.6-bit fixed-point |

0x30FAC

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:12 | R/W | 0x00000100 | Reserved |
| 11:0 | R/W | | SVS Exposure Ratio. Sets ratio between short and very short exposures - this must match the actual exposure ratio on the sensor Format: unsigned 6.6-bit fixed-point |

0x30FB0

| Bit(s) | R/W | Default | Description |
|--------|-----|-----------|--|
| 31:28 | R/W | 0x0C00F00 | Reserved |
| 27:16 | R/W | | LM Thresh low. Data below this threshold will be taken from long exposure only |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | LM Thresh high. These two thresholds are for LM pairs. Both are with respect to the longer stitches. Data above this threshold will be taken from short exposure only |

0x30FB4

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:28 | R/W | 0x0C000F00 | Reserved |
| 27:16 | R/W | | MS Thresh low. Data below this threshold will be taken from long exposure only |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | MS Thresh high. These two thresholds are for MS pairs. Both are with respect to the longer stitches. Data above this threshold will be taken from short exposure only |

0x30FB8

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:28 | R/W | 0x0C000F00 | Reserved |
| 27:16 | R/W | | SVS Thresh low. Data below this threshold will be taken from long exposure only |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | SVS Thresh high. These two thresholds are for SVS pairs. Both are with respect to the longer stitches. Data above this threshold will be taken from short exposure only |

0x30FBC

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | Black level Medium. Black level for medium exposure input NOTE: <i>If the wdr unit is configured to use as 2-exposure, THIS REGISTER POSITION must contain the black level of short exposure as the LM pair is used for all other configurations</i> |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | Black level long. Black level for long exposure input |

0x30FC0

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:28 | R/W | 0 | Reserved |
| 27:16 | R/W | 0 | Black level very Short. Black level for very short exposure input |
| 15:12 | R/W | 0 | Reserved |
| 11:0 | R/W | 0 | Black level Short. Black level for short exposure input |

0x30FC4

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | Black level Out. Black level for module output |

0x30FC8

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:28 | R/W | 0x06000180 | Reserved |
| 27:16 | R/W | | MS NP mult. The noise profile weights are multiplied by this value to give expected noise amplitude. |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | LM NP mult. The noise profile weights are multiplied by this value to give expected noise amplitude. |

0x30FCC

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:28 | R/W | 0x0C000600 | Reserved |
| 27:16 | R/W | | LM Alpha MOV slope. This defines the gradient of the motion alpha ramp. Higher values mean a steeper ramp and so a more rapid transition between non-motion-corrected and motion-corrected regions. |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | SVS NP mult. The noise profile weights are multiplied by this value to give expected noise amplitude. |

0x30FD0

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:28 | R/W | 0x01800180 | Reserved |
| 27:16 | R/W | | SVS Alpha MOV slope. This defines the gradient of the motion alpha ramp. Higher values mean a steeper ramp and so a more rapid transition between non-motion-corrected and motion-corrected regions. |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | MS Alpha MOV slope. This defines the gradient of the motion alpha ramp. Higher values mean a steeper ramp and so a more rapid transition between non-motion-corrected and motion-corrected regions. |

0x30FD4

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:28 | R/W | 0x01000100 | Reserved |
| 27:16 | R/W | | Gain B. Multiplier for color channel B Format: unsigned 4.8-bit fixed-point |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | Gain R. Multiplier for color channel R Format: unsigned 4.8-bit fixed-point |

0x30FD8

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:12 | R/W | 0x00000100 | Reserved |
| 11:0 | R/W | | Consistency thresh mov. Pixel consistency reporting - motion threshold Format: unsigned 4.8-bit fixed-point |

0x30FDC

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:20 | R/W | 0x00080000 | Reserved |
| 19:0 | R/W | | Consistency thresh lvl. Pixel consistency reporting - flicker threshold Format: unsigned 4.8-bit fixed-point |

0x30FE0

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:22 | R/W | 0 | Reserved |
| 21:16 | R/W | 0 | lm neg weight. Higher values make it more likely to interpret differences between the long and medium exposures as noise (and thus do no motion correction). |
| 15:14 | R/W | 0 | Reserved |
| 13:8 | R/W | 0 | lm pos weight. Lower values make it more likely to interpret differences between the long and medium exposures as noise (and thus do no motion correction). |
| 7:6 | R/W | 0 | Reserved |
| 5:0 | R/W | 0 | lm noise thresh. Higher values make it more likely to interpret differences between the long and medium exposures as noise (and thus do no motion correction). |

frame stitch NP LUT VS

Noise profile for short exposure data at frame stitch

This is an array of 128 8-bit registers. The address for element (i) is: $0x31024 + 4 * \text{int}(i / 4)$.

| Address | Bit(s) | R/W | Default | Description |
|------------------------|--------|-----|---------|---|
| 0x31024 | 31:24 | R/W | - | Weight lut(3). Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(2). Noise profile LUT. Calculated during calibration process. |
| | 15:8 | R/W | - | Weight lut(1). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(0). Noise profile LUT. Calculated during calibration process. |
| 0x31028 | 31:24 | R/W | - | Weight lut(7). Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(6). Noise profile LUT. Calculated during calibration process. |
| | 15:8 | R/W | - | Weight lut(5). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(4). Noise profile LUT. Calculated during calibration process. |
| ... repeated until ... | | | | |
| 0x310A0 | 31:24 | R/W | - | Weight lut(127) . Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(126) . Noise profile LUT. Calculated during calibration process. |
| | 15:8 | R/W | - | Weight lut(125). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(124). Noise profile LUT. Calculated during calibration process. |

frame stitch NP LUT S

Noise profile for med2 exposure data at frame stitch

This is an array of 128 8-bit registers. The address for element (i) is: $0x310A4 + 4 * \text{int}(i / 4)$.

| Address | Bit(s) | R/W | Default | Description |
|---------|--------|-----|---------|--|
| 0x310A4 | 31:24 | R/W | - | Weight lut(3). Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(2). Noise profile LUT. Calculated during calibration process. |

| Address | Bit(s) | R/W | Default | Description |
|------------------------|--------|-----|---------|---|
| | 15:8 | R/W | - | Weight lut(1). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(0). Noise profile LUT. Calculated during calibration process. |
| 0x310A8 | 31:24 | R/W | - | Weight lut(7). Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(6). Noise profile LUT. Calculated during calibration process. |
| | 15:8 | R/W | - | Weight lut(5). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(4). Noise profile LUT. Calculated during calibration process. |
| ... repeated until ... | | | | |
| 0x31120 | 31:24 | R/W | - | Weight lut(127) . Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(126) . Noise profile LUT. Calculated during calibration process. |
| | 15:8 | R/W | - | Weight lut(125). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(124). Noise profile LUT. Calculated during calibration process. |

frame stitch NP LUT M

Noise profile for med1 exposure data at frame stitch

This is an array of 128 8-bit registers. The address for element (i) is: $0x31124 + 4 * \text{int}(i / 4)$.

| Address | Bit(s) | R/W | Default | Description |
|------------------------|--------|-----|---------|---|
| 0x31124 | 31:24 | R/W | - | Weight lut(3). Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(2). Noise profile LUT. Calculated during calibration process. |
| | 15:8 | R/W | - | Weight lut(1). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(0). Noise profile LUT. Calculated during calibration process. |
| 0x31128 | 31:24 | R/W | - | Weight lut(7). Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(6). Noise profile LUT. Calculated during calibration process. |
| | 15:8 | R/W | - | Weight lut(5). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(4). Noise profile LUT. Calculated during calibration process. |
| ... repeated until ... | | | | |
| 0x311A0 | 31:24 | R/W | - | Weight lut(127) . Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(126) . Noise profile LUT. Calculated during calibration process. |
| | 15:8 | R/W | - | Weight lut(125). Noise profile LUT. Calculated during calibration process. |

| Address | Bit(s) | R/W | Default | Description |
|---------|--------|-----|---------|--|
| | 7:0 | R/W | - | Weight lut(124). Noise profile LUT. Calculated during calibration process. |

frame stitch NP LUT L

This is an array of 128 8-bit registers. The address for element (i) is: $0x311A4 + 4 * \text{int}(i / 4)$.

| Address | Bit(s) | R/W | Default | Description |
|------------------------|--------|-----|---------|--|
| 0x311A4 | 31:24 | R/W | - | Weight lut(3). Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(2). Noise profile LUT. Calculated during calibration process. |
| | 15:8 | R/W | - | Weight lut(1). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(0). Noise profile LUT. Calculated during calibration process. |
| 0x311A8 | 31:24 | R/W | - | Weight lut(7). Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(6). Noise profile LUT. Calculated during calibration process. |
| | 15:8 | R/W | - | Weight lut(5). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(4). Noise profile LUT. Calculated during calibration process. |
| ... repeated until ... | | | | |
| 0x31220 | 31:24 | R/W | - | Weight lut(127). Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(126). Noise profile LUT. Calculated during calibration process. |
| | 15:8 | R/W | - | Weight lut(125). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(124). Noise profile LUT. Calculated during calibration process. |

decompander0

Frontend lookup (for companded WDR sensor inputs)

0x31224

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:5 | R/W | 0 | Reserved |
| 4 | R/W | 0 | Offset Mode. Lookup0 reflection mode for black offset region 0 = Manual curve reflection 1 = Automatic curve reflection |
| 3:1 | R/W | 0 | Reserved |
| 0 | R/W | 0 | Enable. Frontend lookup0 enable: 0=off 1=on |

decompander1

Frontend lookup (for companded WDR sensor inputs)

0x31228

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:5 | R/W | 0 | Reserved |
| 4 | R/W | 0 | Offset Mode. Lookup0 reflection mode for black offset region 0 = Manual curve reflection 1 = Automatic curve reflection |
| 3:1 | R/W | 0 | Reserved |
| 0 | R/W | 0 | Enable. Frontend lookup0 enable: 0=off 1=on |

digital gain

Digital gain for RAW sensor data

0x3122C

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:12 | R/W | 0x00000100 | Reserved |
| 11:0 | R/W | | Gain. Gain applied to data in 4.8 format |

0x31230

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | Offset. Data black level |

sensor offset fe

offset offset subtraction for each color channel and exposure

0x31234

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | offset 00. offset offset for color channel 00 (R) |

0x31238

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | offset 01. offset offset for color channel 01 (Gr) |

0x3123C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | offset 10. offset offset for color channel 10 (Gb) |

0x31240

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | offset 11. offset offset for color channel 11 (B) |

sqrt

sensor offset for the sqrt module

0x31244

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | black level in. input Data black level |

0x31248

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:16 | R/W | 0 | Reserved |
| 15:0 | R/W | 0 | black level out. output Data black level |

raw frontend

RAW frontend processing

0x3124C

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:8 | R/W | 0x00000005 | Reserved |
| 7 | R/W | | bright disable. Disable detection of bright pixels |
| 6 | R/W | | dark disable. Disable detection of dark pixels |
| 5:4 | R/W | | Reserved |
| 3 | R/W | | show dynamic defect pixel. Show Defect Pixel: 0=off, 1=on |
| 2 | R/W | | dp enable. Dynamic Defect Pixel enable: 0=off, 1=on |
| 1 | R/W | | Reserved |
| 0 | R/W | | ge enable. Green equalization enable: 0=off, 1=on |

0x31250

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------|
| 31:16 | R/W | 0 | Reserved |
| 15:0 | R/W | 0 | debug sel. Debug selection port |

0x31254

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---------------------------------------|
| 31:28 | R/W | 0x00400200 | Reserved |
| 27:16 | R/W | | dp threshold. Defect pixel threshold. |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | dp slope. Slope for HP Mask function |

0x31258

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:24 | R/W | 0x00000266 | Reserved |
| 23:16 | R/W | | dp blend. Controls blending between non-directional and directional replacement values in dynamic defect pixel correction. 0x00 Replace detected defects with non-directional replacement value 0xFF Replace detected defects with directional replacement value |
| 15:0 | R/W | | dpdev threshold. Controls the aggressiveness of the dynamic defect pixel correction near edges. |

0x3125C

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x04000000 | ge threshold. green equalization threshold |
| 15:8 | R/W | | Reserved |
| 7:0 | R/W | | ge strength. Controls strength of Green equalization. Set during calibration. |

0x31260

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:24 | R/W | 0x008000AA | Reserved |
| 23:16 | R/W | | ge sens. Controls the sensitivity of green equalization to edges. |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | ge slope. Slope for GE Mask function |

0x31264

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x00000150 | Sigma In. Manual override of noise estimation |
| 15:0 | R/W | | line thresh. Controls the directional nature of the dynamic defect pixel correction near edges. |

0x31268

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:16 | R/W | 0x00003000 | Reserved |
| 15:8 | R/W | | Thresh Long. Noise threshold for long exposure data Format: unsigned 4.4-bit floating-point |
| 7:0 | R/W | | Thresh Short. Noise threshold for short exposure data Format: unsigned 4.4-bit floating-point |

raw frontend np

Noise profile controls for RAW frontend

0x3126C

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:16 | R/W | 0x0000FFFF | Reserved |
| 15:0 | R/W | | Exp Thresh. Threshold for determining long/short exposure data |

0x31270

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:16 | R/W | 0x00000420 | Reserved |
| 15:8 | R/W | | Long Ratio. Multiplier applied to long exposure data for noise profile calculation Format: unsigned 6.2-bit fixed-point |
| 7:0 | R/W | | Short Ratio. Multiplier applied to short exposure data for noise profile calculation Format: unsigned 6.2-bit fixed-point |

0x31274

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:9 | R/W | 0 | Reserved |
| 8 | R/W | 0 | NP off reflect. Defines how values below black level are obtained. 0: Repeat the first table entry. 1: Reflect the noise profile curve below black level. |
| 7 | R/W | 0 | Reserved |
| 6:0 | R/W | 0 | NP off. Noise profile black level offset |

raw frontend np lut

Noise profile controls for RAW frontend

This is an array of 128 8-bit registers. The address for element (i) is: 0x31278 + 4 * int(i / 4).

| Address | Bit(s) | R/W | Default | Description |
|------------------------|--------|-----|---------|---|
| 0x31278 | 31:24 | R/W | - | Weight lut(3). Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(2). Noise profile LUT. Calculated during calibration process. |
| | 15:8 | R/W | - | Weight lut(1). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(0). Noise profile LUT. Calculated during calibration process. |
| 0x3127C | 31:24 | R/W | - | Weight lut(7). Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(6). Noise profile LUT. Calculated during calibration process. |
| | 15:8 | R/W | - | Weight lut(5). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(4). Noise profile LUT. Calculated during calibration process. |
| ... repeated until ... | | | | |
| 0x312F4 | 31:24 | R/W | - | Weight lut(127) . Noise profile LUT. Calculated during calibration process. |
| | 23:16 | R/W | - | Weight lut(126) . Noise profile LUT. Calculated during calibration process. |

| Address | Bit(s) | R/W | Default | Description |
|---------|--------|-----|---------|--|
| | 15:8 | R/W | - | Weight lut(125). Noise profile LUT. Calculated during calibration process. |
| | 7:0 | R/W | - | Weight lut(124). Noise profile LUT. Calculated during calibration process. |

defect pixel

Detection and processing of static defect-pixels

0x312FC

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:4 | R/W | 0 | Reserved |
| 3 | R/W | 0 | Detection enable. Starts detection |
| 2 | R/W | 0 | Show Static Defect Pixels. Show which pixels have been detected as bad |
| 1 | R/W | 0 | Correction Enable. Correction enable: 0=off 1=on |
| 0 | R/W | 0 | Show Reference. For debug purposes. Show reference values which are compared with actual values to detect bad pixels |

0x31300

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | RO | - | Reserved |
| 27:16 | RO | - | Table Start. Address of first defect-pixel in defect-pixel store |
| 15:13 | RO | - | Reserved |
| 12:1 | RO | - | Defect Pixel Count. Number of defect-pixels detected |
| 0 | RO | - | Overflow. Table overflow flag |

0x31304

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:12 | R/W | - | Reserved |
| 11:0 | R/W | - | Defect Pixel Count In. Number of defect-pixels in the written table |

sinter

Spatial noise reduction

0x31308

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:8 | R/W | 0x0000001C | Reserved |
| 7 | R/W | | rm enable. Adjusts sinter strength radially from center to compensate for Lens shading correction. enable: 0=off, 1=on |
| 6 | R/W | | Int select. Select intensity filter. Should not be modified from suggested values. |
| 5 | R/W | 0 | Filter select. Sinter filter fine tuning. Should not be modified from suggested values. |
| 4 | R/W | 0 | Enable Sinter enable: 0=off 1=on |
| 3:0 | R/W | 0 | Reserved. |

0x3130C

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:6 | R/W | 0x00000034 | Reserved |
| 5 | R/W | | nonlinear wkgen. This config is only valid fr sinter3 Enables (1) or disables (0) nonlinear weight generation |
| 4 | R/W | | nlm en. This config is only valid fr sinter3 Enables (1) or disables (0) the NLM filter |
| 3:0 | R/W | | int config. Intensity blending with mosaic raw |

0x31310

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:8 | R/W | 0x00000009 | Reserved |
| 7:0 | R/W | | sad filt thresh. Block match difference filtering threshold |

0x31314

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x01680280 | rm center y. Center y coordinate of shading map |
| 15:0 | R/W | | rm center x. Center x coordinate of shading map |

0x31318

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:16 | R/W | 0x00000100 | Reserved |
| 15:0 | R/W | | rm off center mult. Normalizing factor which scales the radial table to the edge of the image. Calculated as $2^{31}/R^2$ where R is the furthest distance from the center coordinate to the edge of the image in pixels. |

0x3131C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:24 | R/W | 0 | Thresh 4h. Noise threshold for low horizontal spatial frequencies |
| 23:16 | R/W | 0 | Thresh 2h. Noise threshold for low horizontal spatial frequencies |
| 15:8 | R/W | 0 | Thresh 1h. Noise threshold for high horizontal spatial frequencies |
| 7:0 | R/W | 0 | Thresh 0h. Noise threshold for high horizontal spatial frequencies |

0x31320

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:24 | R/W | 0 | Thresh 4v. Noise threshold for low vertical spatial frequencies |
| 23:16 | R/W | 0 | Thresh 2v. Noise threshold for low vertical spatial frequencies |
| 15:8 | R/W | 0 | Thresh 1v. Noise threshold for high vertical spatial frequencies |
| 7:0 | R/W | 0 | Thresh 0v. Noise threshold for high vertical spatial frequencies |

0x31324

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:24 | R/W | 0xFFFFFFFF | Strength 4. Noise reduction effect for low spatial frequencies |
| 23:16 | R/W | | Strength 2. Unused - no effect |

|--------|-----|---------|--|
| 31:16 | R/W | 0 | Reserved |
| 15:0 | R/W | 0 | black level out. output Data black level |

sensor offset pre shading

offset offset subtraction for each color channel and exposure

0x32B88

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | offset 00. offset offset for color channel 00 (R) |

0x32B8C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | offset 01. offset offset for color channel 01 (Gr) |

0x32B90

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | offset 10. offset offset for color channel 10 (Gb) |

0x32B94

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | offset 11. offset offset for color channel 11 (B) |

radial shading

Radial Lens shading correction

0x32B98

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:1 | R/W | 0 | Reserved |
| 0 | R/W | 0 | Enable. Lens shading correction enable: 0=off, 1=on |

0x32B9C

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x021C03C0 | centerR y. Center y coordinate of the red shading map |
| 15:0 | R/W | | centerR x. Center x coordinate of the red shading map |

0x32BA0

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x021C03C0 | centerG y. Center y coordinate of the green shading map |
| 15:0 | R/W | | centerG x. Center x coordinate of the green shading map |

0x32BA4

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:16 | R/W | 0x021C03C0 | centerB y. Center y coordinate of the blue shading map |
| 15:0 | R/W | | centerB x. Center x coordinate of the blue shading map |

0x32BA8

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x021C03C0 | centerIr y. Center y coordinate of the IR shading map |
| 15:0 | R/W | | centerIr x. Center x coordinate of the IR shading map |

0x32BAC

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x06EA06EA | off center multRy. Normalizing Y factor which scales the Red radial table to the edge of the image. Calculated as $2^{31}/R^2$ where R is the furthest distance from the center coordinate to the edge of the image in pixels. |
| 15:0 | R/W | | off center multRx. Normalizing X factor which scales the Red radial table to the edge of the image. Calculated as $2^{31}/R^2$ where R is the furthest distance from the center coordinate to the edge of the image in pixels. |

0x32BB0

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x06EA06EA | off center multGy. Normalizing Y factor which scales the green radial table to the edge of the image. Calculated as $2^{31}/R^2$ where R is the furthest distance from the center coordinate to the edge of the image in pixels. |
| 15:0 | R/W | | off center multGx. Normalizing X factor which scales the green radial table to the edge of the image. Calculated as $2^{31}/R^2$ where R is the furthest distance from the center coordinate to the edge of the image in pixels. |

0x32BB4

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:16 | R/W | 0x06EA06EA | off center multBy. Normalizing Y factor which scales the blue radial table to the edge of the image. Calculated as $2^{31}/R^2$ where R is the furthest distance from the center coordinate to the edge of the image in pixels. |
| 15:0 | R/W | | off center multBx. Normalizing X factor which scales the blue radial table to the edge of the image. Calculated as $2^{31}/R^2$ where R is the furthest distance from the center coordinate to the edge of the image in pixels. |

0x32BB8

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x06EA06EA | off center multiRy. Normalizing Y factor which scales the lr radial table to the edge of the image. Calculated as $2^{31}/R^2$ where R is the furthest distance from the center coordinate to the edge of the image in pixels. |
| 15:0 | R/W | | off center multiRx. Normalizing X factor which scales the lr radial table to the edge of the image. Calculated as $2^{31}/R^2$ where R is the furthest distance from the center coordinate to the edge of the image in pixels. |

mesh shading

Mesh Lens shading correction

0x32BBC

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:30 | R/W | 0x3F3FE406 | Reserved |
| 29:24 | R/W | | Mesh height. Number of vertical nodes minus 1 |

| Bit(s) | R/W | Default | Description |

| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | Gain 10. Multiplier for color channel 10 (Gb) Format: unsigned 4.8-bit fixed-point |

iridix gain

Digital gain for RAW sensor data

0x32BE0

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:12 | R/W | 0x00000100 | Reserved |
| 11:0 | R/W | | Gain. Gain applied to data in 4.8 format |

0x32BE4

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | Offset. Data black level |

iridix

Iridix is an adaptive, space-variant tone mapping engine.

It is used to maintain or enhance shadow detail while preserving highlights.

0x32BE8

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x00004629 | Reserved |
| 15:14 | R/W | | stat mult |
| 13:7 | R/W | | Reserved |
| 6 | R/W | | postgamma pos. PosGamma application 0=gain 1=data |
| 5 | R/W | | black level amp0. 1=Ignore Black level (set to zero) in amplifier. 0=Use Black level value. |
| 4 | R/W | | Reserved |
| 3 | R/W | | max alg type. Max Bayer Algorithm Type. |
| 2:1 | R/W | | Reserved |
| 0 | R/W | | iridix on. Iridix enable: 0=off 1=on |

0x32BEC

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:24 | R/W | 0x00408012 | Reserved |
| 23:16 | R/W | | slope min. Restricts the minimum slope (gain) which can be generated by the adaptive algorithm |
| 15:8 | R/W | | slope max. Restricts the maximum slope (gain) which can be generated by the adaptive algorithm |
| 7:4 | R/W | | variance intensity. Sets the degree of luminance sensitivity of the algorithm(Irdx7F) |
| 3:0 | R/W | | variance space. Sets the degree of spatial sensitivity of the algorithm(Irdx7F) |

0x32BF0

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:20 | R/W | 0 | Reserved |
| 19:0 | R/W | 0 | black level. Iridix black level. Values below this will not be affected by Iridix. |

0x32BF4

| Bit(s) | R/W | Default | Description |

demosaic rgb

Bayer Demosaic

0x32E3C

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:24 | R/W | 0xADAAC0C0 | UU Slope. Slope of undefined blending threshold in 4.4 logarithmic format |
| 23:16 | R/W | | VA Slope. Slope of VH-AA blending threshold in 4.4 log format. High values will tend to favor one direction over the other (depending on VA Thresh) while lower values will give smoother blending. |
| 15:8 | R/W | | AA Slope. Slope of angular (45/135) blending threshold in 4.4 format. High values will tend to favor one direction over the other (depending on AA Thresh) while lower values will give smoother blending. |
| 7:0 | R/W | | VH Slope. Slope of vertical/horizontal blending threshold in 4.4 logarithmic format. High values will tend to favor one direction over the other (depending on VH Thresh) while lower values will give smoother blending. |

0x32E40

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:8 | R/W | 0x0000005D | Reserved |
| 7:0 | R/W | | Sat Slope. Slope of saturation blending threshold in linear format 2.6 |

0x32E44

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:28 | R/W | 0x00A00131 | Reserved |
| 27:16 | R/W | | AA Thresh. Threshold for the range of angular (45/135) blending. The threshold defines the difference of 45 and 135 gradients at which the 45 gradient will start to be taken into account in the blending (if AA Offset is set to 0). Setting the offset not null (or the slope low) will include proportion of the 45 gradient in the blending before even the gradient difference reaches the threshold (see AA Offset for more details). |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | VH Thresh. Threshold for the range of vertical/horizontal blending The threshold defines the difference of vertical and horizontal gradients at which the vertical gradient will start to be taken into account in the blending (if VH Offset is set to 0). Setting the offset not null (or the slope low) will include proportion of the vertical gradient in the blending before even the gradient difference reaches the threshold (see VH Offset for more details). |

0x32E48

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:28 | R/W | 0x01710070 | Reserved |
| 27:16 | R/W | | UU Thresh. Threshold for the range of undefined blending |
| 15:12 | R/W | | Reserved |
| 11:0 | R/W | | VA Thresh. Threshold for the range of VH-AA blending. The threshold defines the difference of VH and AA gradients at which the VH gradient will start to be taken into account in the blending (if VA Offset is set to 0). Setting the offset not null (or the slope low) will include proportion of the VH gradient in the blending before even the gradient difference reaches the threshold (see VA Offset for more details). |

Luma transform red coefficient. u0.8.

Luma transform blue coefficient. u0.8.

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:1 | R/W | 0x00000000 | Reserved |
| 0 | R/W | | Enable. Sharpening enable: 0=off, 1=on |

0x341B0

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:9 | R/W | 0x00000010 | Reserved |
| 8:0 | R/W | | Strength [8:0]. Controls strength of sharpening effect. u5.4 |

0x341B4

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:24 | R/W | 0x00131E4C | Reserved |
| 23:16 | R/W | | Alpha Undershoot [7:0]. Alpha blending of undershoot and overshoot u0.7, 0 = only undershoot, 255 = only overshoot |
| 15:8 | R/W | | Control B |
| 7:0 | R/W | | Control R |

0x341B4

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:24 | R/W | 0x00131E4C | Reserved |
| 23:16 | R/W | | Alpha Undershoot [7:0]. Alpha blending of undershoot and overshoot u0.7, 0 = only undershoot, 255 = only overshoot |
| 15:8 | R/W | | Control B |
| 7:0 | R/W | | Control R |

0x341B8

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:24 | R/W | 0x00000000 | Reserved |
| 23:16 | R/W | | Luma Offset Low [7:0].Luma offset (min value) of thre region of less than Luma Thresh Low. |
| 15:10 | R/W | | Reserved |
| 9:0 | R/W | | Luma Thresh Low [9:0].Luma threshold below this value, no sharpening will be applied. |

0x341BC

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:26 | R/W | 0x033203FC | Reserved |
| 25:16 | R/W | | Luma Thresh High [9:0]. Luma threshold above this value, sharpening level will be decreased. |
| 15:0 | R/W | | Luma Slope Low [15:0]. Luma linear threshold slope at dark luminance region |

0x341C0

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x06A40000 | Luma Slope High [15:0] Luma linear threshold slope at bright luminance region |
| 15:8 | R/W | | Reserved |
| 7:0 | R/W | | Luma Offset High [7:0]. Luma offset (min value) of thre region of more than Luma Thresh High. |

0x341C4

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:30 | R/W | 0x00CD3FFF | Reserved |
| 29:16 | R/W | | Clip Str Min [13:0], clips sharpening mask of min value. This will control undershoot. U0.14. It is used as negative value. (0 ~ -16383) |
| 15:14 | R/W | | Reserved |
| 13:0 | R/W | | Clip Str Max [13:0], clips sharpening mask of max value. This will control overshoot. U0.14. (0 ~ 16383) |

0x341C8

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:4 | R/W | 0x00000000 | Reserved |
| 3:0 | R/W | | Debug [3:0]. To support different debug output. 0 = normal operation, 1 = luma, 2 = sharpening mask |

ds cs conv**0x341CC**

Conversion of RGB to YUV data using a 3x3 color matrix plus offsets

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:4 | R/W | 0 | Reserved |
| 3 | R/W | 0 | Enable vertical downsample, Vertical Downsampling Enable: 0=off 1=on |
| 2 | R/W | 0 | Enable horizontal downsample, Horizontal Downsampling Enable: 0=off 1=on |
| 1 | R/W | 0 | Enable filter. Filter enable: 0=off 1=on |
| 0 | R/W | 0 | Enable matrix. Color matrix enable: 0=off 1=on |

0x341D0

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:16 | R/W | 0x0000002F | Reserved |
| 15:0 | R/W | | Coefft 11. Matrix coefficient for R-Y multiplier. Format: sign/magnitude 8.8-bit fixed-point |

0x341D4

|--------|-----|------------|---|
| 31:11 | R/W | 0x00000200 | Reserved |
| 10:0 | R/W | | Coefft o2 [10:0]. Offset for Cb Format: signed (2's complement) 11-bit integer |

0x341FC

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:11 | R/W | 0x00000200 | Reserved |
| 10:0 | R/W | | Coefft o3 [10:0]. Offset for Cr Format: signed (2's complement) 11-bit integer |

0x34200

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:10 | R/W | 0x00000000 | Reserved |
| 9:0 | R/W | | Clip min Y [9:0]. Minimal value for Y. Values below this are clipped. Format: signed (2's complement) 10-bit integer |

0x34204

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:10 | R/W | 0x000003FF | Reserved |
| 9:0 | R/W | | Clip max Y [9:0]. Maximal value for Y. Values above this are clipped. Format: signed (2's complement) 10-bit integer |

0x34208

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:10 | R/W | 0x00000000 | Reserved |
| 9:0 | R/W | | Clip min UV [9:0]. Minimal value for Cb, Cr. Values below this are clipped. Format: signed (2's complement) 10-bit integer |

0x3420C

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:10 | R/W | 0x00000000 | Reserved |
| 9:0 | R/W | | Clip max UV [9:0]. Maximal value for Cb, Cr. Values above this are clipped. Format: signed (2's complement) 10-bit integer |

0x34210

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:10 | R/W | 0x000003FF | Reserved |
| 9:0 | R/W | | Data mask RY [9:0]. Data mask for channel 1 (R or Y). Bit-wise and of this value and video data. |

0x34214

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|---|
| 31:10 | R/W | 0x000003FF | Reserved |
| 9:0 | R/W | | Data mask GU [9:0]. Data mask for channel 2 (G or U). Bit-wise and of this value and video data |

0x34218

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:10 | R/W | 0x000003FF | Reserved |
| 9:0 | R/W | | Data mask BV [9:0]. Data mask for channel 3 (B or V). Bit-wise and of this value and video data. |

ds cs conv dither**0x3421C**

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:5 | R/W | 0 | Reserved |
| 4 | R/W | 0 | Shift mode, 0= output is LSB aligned; 1=output is MSB aligned |
| 3 | R/W | 0 | Reserved |
| 2:1 | R/W | 0 | Dither amount, 0= dither to 9 bits; 1=dither to 8 bits; 2=dither to 7 bits; 3=dither to 6 bits |
| 0 | R/W | 0 | Enable dither, enables dithering module |

ds dma writer**DMA writer controls 0x34220**

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:12 | R/W | 0 | Reserved |
| 11 | R/W | 0 | axi xact comp, 0 = dont wait for axi transaction completion at end of frame(just all transfers accepted). 1= wait for all transactions completed |
| 10 | R/W | 0 | Reserved |
| 9 | R/W | 0 | frame write on, 0 = no frames written (when switched from 1, current frame completes writing before stopping), 1= write frame(s) (write single or continuous frame(s)) |
| 8 | R/W | 0 | Reserved |
| 7:6 | R/W | 0 | Plane select, Plane select for planar base modes. Only used if planar outputs required. Not used. Should be set to 0 |
| 5 | R/W | 0 | Reserved |
| 4:0 | R/W | 0 | Base mode, Base DMA packing mode for RGB/RAW/YUV etc |

0x34224

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:16 | R/W | 0x04380780 | active height, Active video height in lines 128-8000 |
| 15:0 | R/W | | active width, Active video width in pixels 128-8000 |

0x34228

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | 0 | bank 0 base address for frame buffer, should be word-aligned |

0x3422C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | 0 | bank 1 base address for frame buffer, should be word-aligned |

0x34230

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | 0 | bank 2 base address for frame buffer, should be word-aligned |

0x34234

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | 0 | bank 3 base address for frame buffer, should be word-aligned |

0x34238

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | 0 | bank 4 base address for frame buffer, should be word-aligned |

0x3423C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:3 | R/W | 0 | Reserved |
| 2:0 | R/W | 0 | Max bank, highest bank*_base to use for frame writes before recycling to bank0_base, only 0 to 4 are valid |

0x34240

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|--|
| 31:0 | R/W | 0x00001000 | Line offset: Indicates the offset in bytes from the start of one line to the next line. This value should be equal to or larger than one line of image data and should be word-aligned |

0x34244

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:4 | R/W | - | Reserved |
| 3:1 | R/O | - | wbank curr, write bank currently active. valid values =0-4. updated at start of frame write |
| 0 | R/O | - | wbank active, 1 = wbank_curr is being written to. Goes high at start of writes, low at last write transfer/completion on axi. |

0x34250

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:16 | R/O | - | frame wcount, count of outgoing frame writes (starts) from vdma_writer sent to AXI output, non resetable, rolls over, updates at pixel 1 of new frame on video in |
| 15:0 | R/O | | frame icount , count of incoming frames (starts) to vdma_writer on video input, non resetable, rolls over, updates at pixel 1 of new frame on video in |

0x34258

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:9 | R/O | - | Reserved |
| 8 | R/O | | video alarm, active high, problem found on video port(s) (active width/height or interline/frame blanks failure) |
| 7 | R/O | | vi fail interframe blanks, clearable alarm, high to indicate interframe blanking below min |
| 6 | R/O | | vi fail interline blanks, clearable alarm, high to indicate interline blanking below min |
| 5 | R/O | | vi fail active height, clearable alarm, high to indicate mismatched active_height detected (also raised on missing field!) |
| 4 | R/O | | vi fail active width, clearable alarm, high to indicate mismatched active_width detected |
| 3 | R/O | | axi fail wxact ostand, clearable alarm, high when wxact_ostand_limit reached |
| 2 | R/O | | axi fail wmaxwait, clearable alarm, high when wmaxwait_limit reached |
| 1 | R/O | | axi fail awmaxwait, clearable alarm, high when awmaxwait_limit reached |
| 0 | R/O | | axi fail bresp, clearable alarm, high to indicate bad bresp captured |

0x3425C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | R/O | - | blk status, block status output (reserved) - blk_status(0) = wfifo_fail_full - blk_status(1) = wfifo_fail_empty - blk_status(4) = pack_fail_overflow - blk_status(24) = intw_fail_user_intfc_sig - blk_status(others) = zero |

0x34260

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:16 | R/W | 0 | Reserved |
| 15:0 | R/W | 0 | lines wrapped, number of lines to write from base address before wrapping back to base address. 0 = no wrapping, >0 = last line written before wrapping |

0x34264

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:16 | R/W | 0 | Reserved |
| 15:0 | R/W | 0 | linetick first, line number of first linetick. 0 = no linetick, >0 = line number to generate linetick |

0x34268

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:16 | R/W | 0 | Reserved |
| 15:0 | R/W | 0 | linetick repeat, line repeat interval of linetick. 0 = no repeat, >0 = repeat interval in lines |

0x3426C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:16 | R/W | 0 | linetick delay, Linetick delay in vcke cycles to add to min 3 cycle latency from acl_vi. 0-65535. Must be less than next linetick generation time or count will not mature and no linetick is not produced. -NOTE: linetick delay can run past end of frame/field and also into next frame! - Take care maturity time is less than next configured linetick generation position! - Take care when changing config between frame too! |
| 15:1 | R/W | 0 | Reserved |
| 0 | R/W | 0 | linetick eol, Linetick start/end of line control. 0 = use start of line, 1 = use end of line to generate linetick |

0x34270

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:2 | R/W | 0 | Reserved |
| 1 | R/W | 0 | axi_id_multi, 0= static value (axi_id_value) for awid/wid, 1 = incrementing value per transaction for awid/wid wrapping to 0 after axi_id_value |
| 0 | R/W | 0 | Reserved |

0x34274

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:4 | R/W | 0 | Reserved |
| 3:0 | R/W | 0 | axi id value, value to send for awid, wid and expected on bid. Good default = 0000 |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:16 | R/W | 0 | linetick delay, Linetick delay in vcke cycles to add to min 3 cycle latency from acl_vi. 0-65535. Must be less than next linetick generation time or count will not mature and no linetick is not produced. -NOTE: linetick delay can run past end of frame/field and also into next frame! - Take care maturity time is less than next configured linetick generation position! - Take care when changing config between frame too! |
| 15:1 | R/W | 0 | Reserved |
| 0 | R/W | 0 | linetick eol, Linetick start/end of line control. 0 = use start of line, 1 = use end of line to generate linetick |

0x342C8

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:2 | R/W | 0 | Reserved |
| 1 | R/W | 0 | axi_id_multi, 0= static value (axi_id_value) for awid/wid, 1 = incrementing value per transaction for awid/wid wrapping to 0 after axi_id_value |
| 0 | R/W | 0 | |

0x342CC

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:4 | R/W | 0 | Reserved |
| 3:0 | R/W | 0 | axi id value, value to send for awid, wid and expected on bid. Good default = 0000 |

multi ctx**0x342D0**

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:1 | R/W | 0 | Reserved |
| 0 | R/W | 0 | Configure Done. This signal is only required in multi-context mode Once configuration for ping/pong address space is done, MCU must write 1 into this address This register is self-clearing. So the read-back will be 0 |

10.1.2.3 Demux Registers

Demux Common Register

Final address = 0xFFD06000+ offset * 4

STB_TOP_CONFIG 0xf0

| Bit(s) | R/W | Default | Description |

COMM_DESC_KEY0 0xf5

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | RW | 0 | Common descrambler key (key Bits[63:32]) |

COMM_DESC_KEY1 0xf6

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | RW | 0 | Common descrambler key (key Bits[31:0]) |

COMM_DESC_KEY_RW 0xf7

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 7 | RW | 0 | Key endian; |
| 6 | RW | 0 | Write key ladder cw [127:64] to key; |
| 5 | RW | 0 | Write key ladder cw [63:0] to key; |
| 4 | RW | 0 | 0: write to descramble 1; 1: write to descramble 2; |
| 3:0 | RW | 0 | The address of key |

CIPLUS_KEY0 0xf8

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | RW | 0 | CI+ Register defines Bits[31:0] of the key |

CIPLUS_KEY1 0xf9

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | RW | 0 | CI+ Register defines Bits[63:32] of the key |

CIPLUS_KEY2 0xfa

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | RW | 0 | CI+ Register defines Bits[95:64] of the key |

CIPLUS_KEY3 0xfb

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | RW | 0 | CI+ Register defines Bits[127:96] of the key |

CIPLUS_KEY_WR 0xfc

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
|--------|-----|---------|-------------|

| | | | |
|---|----|---|----------------------|
| 5 | RW | 0 | write AES IV B value |
| 4 | RW | 0 | write AES IV A value |
| 3 | RW | 0 | write AES B key |
| 2 | RW | 0 | write AES A key |
| 1 | RW | 0 | write DES B key |
| 0 | RW | 0 | write DES A key |

CIPLUS_CONFIG 0xfd

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 15:8 | RW | 0 | TS out delay. This controls the rate at which the Cplus module drives TS out |
| 3 | RW | 0 | General enable for the cplus module |
| 2 | RW | 0 | AES CBC disable (default should be 0 to enable AES CBC) |
| 1 | RW | 0 | AES Enable |
| 0 | RW | 0 | DES Eanble |

CIPLUS_ENDIAN 0xfe

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------|
| 31:28 | RW | 0 | AES IV endian |
| 27:24 | RW | 0 | AES message out endian |
| 23:20 | RW | 0 | AES message in endian |
| 19:16 | RW | 0 | AES key endian |
| 15:11 | RW | 0 | unused |
| 10:8 | RW | 0 | DES message out endian |
| 6:4 | RW | 0 | DES message in endian |
| 2:0 | RW | 0 | DES key endian |

COMM_DESC_2_CTL 0xff

| 0 | R | 0 | om_cmd_read_finished (write) |

OM_CMD_DATA_O 0x0c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------------|
| 15:9 | R | 0 | count_stb_om_w_rd (read only) |
| 8:0 | R | 0 | start_stb_om_wa_rd (read only) |

OM_CMD_DATA2_O 0x0d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 11:0 | R | 0 | offset for section data |

SEC_BUFF_01_START_O 0x0e

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:16 | RW | 0 | base address for section buffer group 0 (*0x400 to get real address) |
| 15:0 | RW | 0 | base address for section buffer group 1 (*0x400 to get real address) |

SEC_BUFF_23_START_O 0x0f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:16 | RW | 0 | base address for section buffer group 2 (*0x400 to get real address) |
| 15:0 | RW | 0 | base address for section buffer group 3 (*0x400 to get real address) |

SEC_BUFF_SIZE_O 0x10

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 3:0 | RW | 0 | section buffer size for group 0 (bitused, for example, 10 means 1K) |
| 7:4 | RW | 0 | section buffer size for group 1 |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------|
| 11:8 | RW | 0 | section buffer size for group 2 |
| 15:12 | RW | 0 | section buffer size for group 3 |

SEC_BUFF_BUSY_O 0x11

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R | 0 | Section buffer busy status for buff 31:0 (Read Only) |

SEC_BUFF_READY_O 0x12

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | RW | 0 | section buffer write status for buff 31:0 -- Read clear buffer status (buff READY and BUSY) – write |

SEC_BUFF_NUMBER_O 0x13

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 4:0 | RW | 0 | SEC_BUFFER_INDEX RW |
| 12:8 | RW | 0 | SEC_BUFFER_NUMBER for the INDEX buffer Read_Only |
| 14 | RW | 0 | output_section_buffer_valid |
| 15 | RW | 0 | section_reset_busy (Read Only) |

ASSIGN_PID_NUMBER_O 0x14

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------|
| 9:5 | RW | 0 | BYPASS PID number |
| 4:0 | RW | 0 | PCR PID number |

VIDEO_STREAM_ID_O 0x15

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------------|
| 31:16 | RW | 0 | for video2 |
| 15:0 | RW | 0 | stream_id filter Bit(s) enable |

AUDIO_STREAM_ID_O 0x16

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 15:0 | RW | 0 | For audio |

SUB_STREAM_ID_O 0x17

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 15:0 | RW | 0 | For sub |

OTHER_STREAM_ID_O 0x18

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 15:0 | RW | 0 | For other |

PCR90K_CTL_O 0x19

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 12 | RW | 0 | PCR_EN |
| 11:0 | RW | 0 | PCR90K_DIV |

PCR_DEMUX_O 0x1a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31:0 | RW | 0 | PCR |

VIDEO_PTS_DEMUX_O 0x1b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31:0 | RW | 0 | VPTS |

VIDEO_DTS_DEMUX_O 0x1c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31:0 | RW | 0 | VDTS |

AUDIO_PTS_DEMUX_O 0x1d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31:0 | RW | 0 | APTS |

SUB_PTS_DEMUX_O 0x1e

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31:0 | RW | 0 | SPTS |

STB_PTS_DTS_STATUS_O 0x1f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------|
| 15 | R | 0 | SUB_PTS[32] |
| 14 | R | 0 | AUDIO_PTS[32] |
| 13 | R | 0 | VIDEO_DTS[32] |

SEC_BUFF_BASE_O 0x26

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 15:0 | RW | 0 | base address for section buffer start (*0x10000 to get real base) |

DEMUX_MEM_REQ_EN_O 0x27

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------------|
| 11 | RW | 0 | mask bit for OTHER_PES_AHB_DMA_EN |
| 10 | RW | 0 | mask bit for SUB_AHB_DMA_EN |
| 9 | RW | 0 | mask bit for BYPASS_AHB_DMA_EN |
| 8 | RW | 0 | mask bit for SECTION_AHB_DMA_EN |

| | | | |
|-----|----|---|-----------------------------|
| 7 | RW | 0 | mask bit for recoder stream |
| 6:0 | RW | 0 | mask bit for each type |

VIDEO_PDTS_WR_PTR_O 0x28

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------|
| 31:0 | RW | 0 | vb_wr_ptr for video PDTS |

AUDIO_PDTS_WR_PTR_O 0x29

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------|
| 31:0 | RW | 0 | ab_wr_ptr for video PDTS |

SUB_WR_PTR_O 0x2a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 20:0 | RW | 0 | SB_WRITE_PTR (sb_wr_ptr << 3 == byte write position) |

SB_START_O 0x2b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 19:0 | RW | 0 | SB_START (sb_start << 12 == byte address); |

SB_LAST_ADDR_O 0x2c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 20:0 | RW | 0 | SB_SIZE (sb_size << 3 == byte size, 16M maximun) |

SB_PES_WR_PTR_O 0x2d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------|
| 31:0 | RW | 0 | sb_wr_ptr for sub PES |

OTHER_WR_PTR_O 0x2e

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:21 | RW | 0 | ob_wr_ptr for other PES |
| 20:0 | RW | 0 | OB_WRITE_PTR (ob_wr_ptr << 3 == byte write position) |

OB_START_O 0x2f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 19:0 | RW | 0 | OB_START (ob_start << 12 == byte address); |

OB_LAST_ADDR_O 0x30

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
|--------|-----|---------|-------------|

| | | | |
|------|----|---|--|
| 20:0 | RW | 0 | OB_SIZE (ob_size << 3 == byte size, 16M maximun) |
|------|----|---|--|

OB_PES_WR_PTR_O 0x31

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------|
| 31:0 | RW | 0 | ob_wr_ptr for sub PES |

STB_INT_MASK_O 0x32

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------------|
| 9 | RW | 0 | splicing_point |
| 8 | RW | 0 | other_PES_int |

DEMUX_CHANNEL_RESET_O 0x3d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | R | 0 | Bit 31:0 reset channel status - Each Bit reset each channel |

DEMUX_SCRAMBLING_STATE_O 0x3e

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|----------------------------------|
| 31:0 | R | 0 | Scrambling state of each channel |

DEMUX_CHANNEL_ACTIVITY_O 0x3f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|----------------------------------|
| 31:0 | R | 0 | Channel activity of each channel |

DEMUX_STAMP_CTL_O 0x40

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------|
| 4 | RW | 0 | video_stamp_use_dts |
| 3 | RW | 0 | audio_stamp_sync_1_en |
| 2 | RW | 0 | audio_stamp_insert_en |
| 1 | RW | 0 | video_stamp_sync_1_en |
| 0 | RW | 0 | video_stamp_insert_en |

DEMUX_VIDEO_STAMP_SYNC_0_O 0x41

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------|
| 31:0 | RW | 0 | Video stamp sync [63:32] |

DEMUX_VIDEO_STAMP_SYNC_1_O 0x42

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31:0 | RW | 0 | Video stamp sync [31:0] |

DEMUX_AUDIO_STAMP_SYNC_0_O 0x43

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------|
| 31:0 | RW | 0 | Aideo stamp sync [63:32] |

DEMUX_AUDIO_STAMP_SYNC_1_O 0x44

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31:0 | RW | 0 | Aideo stamp sync [31:0] |

DEMUX_SECTION_RESET_O 0x45

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R | 0 | Write : Bit[4:0] sector filter number for reset Read : select according to output_section_buffer_valid: per bit per section buffer valid status or section_buffer_ignore |

DEMUX_INPUT_TIMEOUT_C_O 0x46

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------------|
| 31:0 | RW | 0 | channel_reset_timeout_disable |

DEMUX_INPUT_TIMEOUT_O 0x47

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | RW | 0 | no_match_reset_timeout_disable |
| 30:0 | RW | 0 | input_time_out_int_cnt (0 -- means disable) Wr-setting, Rd-count |

DEMUX_PACKET_COUNT_O 0x48

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------------|
| 31:0 | RW | 0 | channel_packet_count_disable |

DEMUX_PACKET_COUNT_C_O 0x49

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------------|
| 31 | RW | 0 | no_match_packet_count_disable |
| 30:0 | RW | 0 | input_packet_count |

DEMUX_CHAN_RECORD_EN_O 0x4a

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|-----------------------|
| 31:0 | RW | 0xffffffff | channel_record_enable |

DEMUX_CHAN_PROCESS_EN_O 0x4b

| Bit(s) | R/W | Default | Description |
|--------|-----|------------|------------------------|
| 31:0 | RW | 0xffffffff | channel_process_enable |

DEMUX_SMALL_SEC_CTL_O 0x4c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------------------|
| 31:24 | RW | 0 | small_sec_size ((n+1) * 256 Bytes) |
| 23:16 | RW | 0 | small_sec_rd_ptr |
| 15:8 | RW | 0 | small_sec_wr_ptr |
| 7:2 | RW | 0 | reserved |

| | | | |
|---|----|---|----------------------------|
| 1 | RW | 0 | small_sec_wr_ptr_wr_enable |
| 0 | RW | 0 | small_section_enable |

10.2 Video Output

10.2.1 Overview

This section describes A311D's VPU sub-module, including RDMA sub-module, VIU sub-module, HDMITX sub-module, CVBS sub-module and MIPI_DSI sub-module.

10.2.2 VPU

VPU is display process unit, the main function is to receive data from decoder/ddr/hdmirx etc, then process the source data in order to get the high-quality video picture, and finally send out the video to the screen by HDMITX/CVBS/MIPI etc.

10.2.3 Register Description

10.2.3.1 VPU Registers

VPU_VDIN_PRE_ARB_CTRL 0x2714

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | VDIN_PREARB_SOFT_RESET: 1=SW reset vdin_mmc_pre_arb. |
| 30-18 | R | 0 | Reserved. |
| 17 | R/W | 1 | VDIN_ACG_EN: 1=Enable auto-clock gating of vdin_mmc_pre_arb. |
| 16 | R/W | 0 | VDIN_DISABLE_CLK: 1=Disalbe the clock to vdin_mmc_pre_arb. |
| 15-0 | R/W | 0xffff | VDIN_REQ_EN: vdin_mmc_pre_arb request enable. |

VPU_VDISP_PRE_ARB_CTRL 0x2715

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | VDISP_PREARB_SOFT_RESET: 1=SW reset vdisp_mmc_pre_arb. |
| 30-18 | R | 0 | Reserved. |
| 17 | R/W | 1 | VDISP_ACG_EN: 1=Enable auto-clock gating of vdisp_mmc_pre_arb. |
| 16 | R/W | 0 | VDISP_DISABLE_CLK: 1=Disalbe the clock to vdisp_mmc_pre_arb. |
| 15-0 | R/W | 0xffff | VDISP_REQ_EN: vdisp_mmc_pre_arb request enable. |

VPU_VPUARB2_PRE_ARB_CTRL 0x2716

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | VPUARB2_PREARB_SOFT_RESET: 1=SW reset vpuarb2_mmc_pre_arb. |
| 30-18 | R | 0 | Reserved. |
| 17 | R/W | 1 | VPUARB2_ACG_EN: 1=Enable auto-clock gating of vpuarb2_mmc_pre_arb. |

| | | | |
|------|-----|--------|--|
| 16 | R/W | 0 | VPUARB2_DISABLE_CLK: 1=Disalbe the clock to vpuarb2_mmc_pre_arb. |
| 15-0 | R/W | 0xffff | VPUARB2_REQ_EN: vpuarb2_mmc_pre_arb request enable. |

VPU_VIU_VENC_MUX_CTRL 0x271a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 17-16 | W | 0 | RASP DPI CLOCK SEL : 00 : cph1 01 : cph2 10/11 : cph3 |
| 11-8 | R/W | 0 | VIU_VDIN_SEL_DATA: Select which data to VDI6 path, must clear it first before switching the data. 4'b0000: Disable VIU to VDI6 path 4'b0001: Select ENCI data to VDI6 4'b0010: Select ENCP data to VDI6 4'b0100: Select ENCT data to VDI6 4'b1000: Select ENCL data to VDI6 |
| 7-4 | R/W | 0 | VIU_VDIN_SEL_CLK: Select which clock to VDI6 path, must clear it first before switching the clock. 4'b0000: Disable VIU to VDI6 clock 4'b0001: Select ENCI clock to VDI6 4'b0010: Select ENCP clock to VDI6 4'b0100: Select ENCT clock to VDI6 4'b1000: Select ENCL clock to VDI6 |
| 3-2 | R/W | 0 | VIU2_SEL_VENC: Select which one of the encl/P/T/L that Viu2 connects to. 0: ENCL 1: ENCI 2: ENCP 3: ENCT |
| 1-0 | R/W | 0 | VIU1_SEL_VENC: Select which one of the encl/P/T/L that Viu1 connects to. 0: ENCL 1: ENCI 2: ENCP 3: ENCT |

VPU_HDMI_SETTING 0x271b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 15-12 | R/W | 0 | RD_RATE: Read rate to the async FIFO between VENC and HDMI. 0: One read every rd_clk 1: One read every 2 rd_clk |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| | | | 2: One read every 3 rd_clk ... 15: One read every 16 rd_clk |
| 11-8 | R/W | 0 | WR_RATE: Write rate to the async FIFO between VENC and HDMI. 0: One write every wr_clk 1: One write every 2 wr_clk 2: One write every 3 wr_clk ... 15: One write every 16 wr_clk |
| 7-5 | R/W | 0 | DATA_COMP_MAP: Input data is CrYCr(BRG), map the output data to desired format: 0: output CrYCb (BRG) 1: output YCbCr (RGB) 2: output YCrCb (RBG) 3: output CbCrY (GBR) 4: output CbYCr (GRB) 5: output CrCbY (BGR) 6,7: Reserved |
| 4 | R/W | 0 | INV_DVI_CLK: If true, invert the polarity of clock output to external DVI interface. (NOT internal HDMI). |
| 3 | R/W | 0 | INV_VSYNC: If true, invert the polarity of VSYNC input from VENC |
| 2 | R/W | 0 | INV_HSYNC: If true, invert the polarity of HSYNC input from VENC |
| 1-0 | R/W | 0 | SRC_SEL: Select which HDMI source from between ENCI and ENCP. 2'b00: Disable HDMI source 2'b01: Select ENCI data to HDMI 2'b10: Select ENCP data to HDMI |

ENCI_INFO_READ 0x271c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------------------|
| 31-29 | R | 0 | Current ENCI field status. |
| 28-25 | R | 0 | Reserved |
| 24-16 | R | 0 | Current ENCI line counter status. |
| 15-11 | R | 0 | Reserved |
| 10-0 | R | 0 | Current ENCI pixel counter status. |

ENCP_INFO_READ 0x271d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
|--------|-----|---------|-------------|

| | | | |
|-------|---|---|------------------------------------|
| 31-29 | R | 0 | Current ENCP field status. |
| 28-16 | R | 0 | Current ENCP line counter status. |
| 15-13 | R | 0 | Reserved |
| 12-0 | R | 0 | Current ENCP pixel counter status. |

ENCT_INFO_READ 0x271e

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------------------|
| 31-29 | R | 0 | Current ENCT field status. |
| 28-16 | R | 0 | Current ENCT line counter status. |
| 15-13 | R | 0 | Reserved |
| 12-0 | R | 0 | Current ENCT pixel counter status. |

ENCL_INFO_READ 0x271f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------------------|
| 31-29 | R | 0 | Current ENCL field status. |
| 28-16 | R | 0 | Current ENCL line counter status. |
| 15-13 | R | 0 | Reserved |
| 12-0 | R | 0 | Current ENCL pixel counter status. |

VPU_SW_RESET 0x2720

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------|
| 3 | R/W | 0 | vpuarb2_mmc_arb_rst_n |
| 2 | R/W | 0 | vdisp_mmc_arb_rst_n |
| 1 | R/W | 0 | vdin_mmc_arb_rst_n |
| 0 | R/W | 0 | viu_rst_n |

VPU_CLK_GATE 0x2723

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------|
| 30-18 | R/W | 0x0 | Reserved |
| 17 | R/W | 0x1 | Clk_b control register no latch |
| 16 | R/W | 0x1 | Clk_vib enable |
| 15 | R/W | 0x1 | Gvapbclk enable |
| 14 | R/W | 0x1 | Clk mpeg vlock enable |
| 13 | R/W | 0x1 | Reserved |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 12 | R/W | 0x1 | Venc_dac_process_clk enable |
| 11 | R/W | 0x1 | Venc_i_top enable |
| 10 | R/W | 0x1 | Venci_int enable |
| 9:8 | R/W | 0x11 | Clk_vib latch sync source select 00: di2ldim_go_field, 01: post_frame_rst;10: pre_frame_rst, 11:viu_go_field |
| 7 | R/W | 0x1 | Reserved |
| 6 | R/W | 0x1 | Vpu_misc_clk enable |
| 5 | R/W | 0x1 | Venc_l_top enable |
| 4 | R/W | 0x1 | Venc_l_int enable |
| 3 | R/W | 0x1 | Venc_p_int enable |
| 2 | R/W | 0x1 | Reserved |
| 1 | R/W | 0x1 | Vi_top clock enable |
| 0 | R/W | 0x1 | Venc_p_top enable |

VPU_HDMI_DATA_OVR 0x2727

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | DATA_OVR_EN: Control if override HDMI input data with DATA_OVR[29:0], for display e.g. black or blue screen. 0: No override 1: Enable override |
| 30 | R | 0 | Reserved |
| 29-0 | R/W | 0 | DATA_OVR: programmable pixel data value for override. |

VPU_VPU_PWM_V0 0x2730

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|

VPU_VLOCK_MISC_CTRL 0x3001

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 26-24 | R/W | 0x0 | Adj_capt_pxgroups, make sure the pixel number in one line of encoder is multiples of 2^pxgroups |
| 23-16 | R/W | 0x0 | lfrm_cnt_mod: (output vsync freq)/(input vsync_freq * ifrm_cnt_mod) must be integer |
| 15-8 | R/W | 0x0 | Output vsync frequency |
| 7-0 | R/W | 0x0 | Input vsync frequency |

VPU_VLOCK_LOOP0_ACCUM_LMT 0x3002

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 26-0 | R/W | 0x0 | LOOP0 accumulator limit |

VPU_VLOCK_LOOP0_CTRL0 0x3003

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-24 | R/W | 0x0 | Loop0 errclip rate |
| 23-20 | R/W | 0x0 | Loop0_adj_pll_rs, right shift of loop0 adjust pll portion |
| 19-12 | R/W | 0x0 | Loop0_adj_pll_gain, u1.7 |
| 11-8 | R/W | 0x0 | Loop0_adj_capt_rs, right shift of loop0 adjust capture portion |
| 7-0 | R/W | 0x0 | Loop0_adj_capt_gain |

VPU_VLOCK_LOOP0_CTRL1 0x3004

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------|
| 23-20 | R/W | 0x0 | Loop1_adj_pll_rs |
| 19-12 | R/W | 0x0 | Loop1_adj_pll_gain |
| 11-8 | R/W | 0x0 | Loop1_adj_capt_rs |
| 7-0 | R/W | 0x0 | Loop1_adj_capt_gain |

VPU_VLOCK_LOOP1_IMISSYNC_MAX 0x3005

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 27-0 | R/W | 0x0 | Loop1 imissync max, input signal is missed after input vsync counter is larger than this max threshold |

VPU_VLOCK_LOOP1_IMISSYNC_MIN 0x3006

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 27-0 | R/W | 0x0 | Loop1 imissync min, input signal is missed after input vsync counter is less than this max threshold |

VPU_VLOCK_OVERWRITE_ACCUM0 0x3007

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------|
| 27-0 | R/W | 0x0 | Overwrite value of accum0 |

VPU_VLOCK_OVERWRITE_ACCUM1 0x3008

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------|
| 27-0 | R/W | 0x0 | Overwrite value of accum1 |

VPU_VLOCK_OUTPUT0_CAPT_LMT 0x3009

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------|
| 26-0 | R/W | 0x0 | Output0 capture limit |

VPU_VLOCK_OUTPUT0_PLL_LMT 0x300a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------|
| 26-0 | R/W | 0x0 | Output0 pll limit |

VPU_VLOCK_OUTPUT1_CAPT_LMT 0x300b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------|
| 26-0 | R/W | 0x0 | Output1 capture limit |

VPU_VLOCK_OUTPUT1_PLL_LMT 0x300c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------|
| 26-0 | R/W | 0x0 | Output1 pll limit |

VPU_VLOCK_LOOP1_PHSDF_TARGET 0x300d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 27-0 | R/W | 0x0 | Loop1 phase difference target, (input vsync - output vsync) phase distance target |

VPU_VLOCK_RO_LOOP0_ACCUM 0x300e

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------------|
| 27-0 | R | 0x0 | Read only, loop0 accum result |

VPU_VLOCK_RO_LOOP1_ACCUM 0x300f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------------|
| 27-0 | R | 0x0 | Read only, loop1 accum result |

VPU_VLOCK_OROW_OCOL_MAX 0x3010

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
|--------|-----|---------|-------------|

| | | | |
|-------|-----|-----|----------|
| 29-16 | R/W | 0x0 | Ocol_max |
| 13-0 | R/W | 0x0 | Orow_max |

VPU_VLOCK_RO_VS_I_D 0x3011

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------------|
| 27-0 | R | 0x0 | Read only, input vsync counter |

VPU_VLOCK_RO_VS_O_D 0x3012

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------|
| 27-0 | R | 0x0 | Read only, output vsync counter |

VPU_VLOCK_RO_LINE_PIX_ADJ 0x3013

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------------|
| 29-16 | R | 0x0 | Read only, encoder line adjust number |
| 13-0 | R | 0x0 | Read only, encoder pix adjust number |

VPU_VLOCK_RO_OUTPUT_00_01 0x3014

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------|
| 31-16 | R | 0x0 | Read only, accum0 output 00 |
| 15-0 | R | 0x0 | Read only, accum0 output 01 |

VPU_VLOCK_RO_OUTPUT_10_11 0x3015

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------|
| 31-16 | R | 0x0 | Read only, accum1 output 10 |
| 15-0 | R | 0x0 | Read only, accum1 output 11 |

VPU_VLOCK_MX4096 0x3016

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 20-0 | R/W | 0x0 | Mx4096 |

VPU_VLOCK_STBDET_WIN0_WIN1 0x3017

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------|
| 15-8 | R/W | 0x0 | Verr_stbdet_win1 |
| 7-0 | R/W | 0x0 | Verr_stbdet_win0 |

VPU_VLOCK_STBDET_CLP 0x3018

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 15-8 | R | 0x0 | Read only, ro_verr_clp_win1, verr_clp number in win0 |
| 7-0 | R | 0x0 | Read only, ro_verr_clp_win0, verr_clp number in win1 |

VPU_VLOCK_STBDET_ABS_WIN0 0x3019

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------|
| 23-0 | R | 0x0 | Read only, ro_verr_abs_win0 |

VPU_VLOCK_STBDET_ABS_WIN1 0x301a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------|
| 23-0 | R | 0x0 | Read only, ro_verr_abs_win1 |

VPU_VLOCK_STBDET_SGN_WIN0 0x301b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------|
| 23-0 | R | 0x0 | Read only, ro_verr_sgn_win0 |

VPU_VLOCK_STBDET_SGN_WIN1 0x301c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------|
| 23-0 | R | 0x0 | Read only, ro_verr_sgn_win1 |

VPU_VLOCK_ADJ_EN_SYNC_CTRL 0x301d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-24 | R/W | 0x0 | PLL adjust enable signal sync ctrl, adj_en_for_pll_end, end counter of adj_en_pll signal fall to 0 |
| 23-16 | R/W | 0x0 | PLL adjust enable signal sync ctrl, adj_en_for_pll_start, start counter of adj_en_pll signal go to 1, start must be larger than end |
| 15-8 | R/W | 0x0 | Adj_en_sync_latch_cnt, this is a delay to latch the adj_en signal |
| 7-0 | R/W | 0x0 | Adj_en_ext_cnt, extend the adj_en signal from vid_lock clock domain to pll sample domain, make sure it's wide enough |

VPU_VLOCK_GCLK_EN 0x301e

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------|
| 2 | R/W | 0x0 | Ref clock enable |
| 1 | R/W | 0x0 | Vsout clk enable |
| 0 | R/W | 0x0 | Vsin clk enable |

VPU_VLOCK_LOOP1_ACCUM_LMT 0x301f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 26-0 | R/W | 0x0 | LOOP1 accumulator limit |

VPU_VLOCK_RO_M_INT_FRAC 0x3020

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------|
| 29-16 | R | 0x0 | Read only, m_int to PLL |
| 13-0 | R | 0x0 | Read only, m_frac to PLL |

10.2.3.3 VIU Top-Level Registers**VIU_SW_RESET 0x1A01**

10.2.3.5 DI_RMEM_IF0 Registers**DI_IF0_GEN_REG 0x2030**

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R/W | 0 | ENABLE_FREE_CLK. 0: Gated clock for power saving 1: Free-running clock to drive logic |
| 30 | R/W | 0 | SW_RESET: Write 1 to this bit to generate a pulse to reset everything except registers. |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 29 | R/W | 0 | RESET_ON_GO_FIELD: Define whether to reset state machines on go_field pulse. 0: No reset on go_field 1: go_field reset everything except registers |
| 28 | R/W | 0 | URGENT_CHROMA: Set urgent level for chroma fifo request from DDR. 0: Non urgent 1: Urgent |
| 27 | R/W | 0 | URGENT_LUMA: Set urgent level for luma fifo request from DDR. 0: Non urgent 1: Urgent |
| 26 | R/W | 0 | Chroma_end_at_last_line: For chroma line, similar to luma_end_at_last_line, as below. Not used if data are stored together in one canvas. |
| 25 | R/W | 0 | Luma_end_at_last_line: Control whether continue outputting luma line past last line. 0: Repeat the last line or dummy pixels, after past the last line 1: Stop outputting data, once past the last line. |
| 24-19 | R/W | 4 | Hold_lines: After go_field, the number of lines to hold before the module is enabled. |
| 18 | R/W | 0 | LAST_LINE: This bit controls whether we simply repeat the last line or we push dummy pixels. '1' tells the state-machines to repeat the last line using the dummy pixels defined in the register below. '0' indicates that the state-machine should re-read the last line of real data. |
| 17 | R | 0 | Busy status of the state-machines. '1' = busy, '0' = idle |
| 16 | R/W | 0 | DEMUX_MODE: 0 = 4:2:2, 1 = RGB (24-bit). This value is used to control the demuxing logic when the picture is stored together. When a picture is stored together, the data is read into a single FIFO (the Y FIFO) and must be demultiplexed into the "drain" outputs. In the case of 4:2:2 the data is assumed to be stored in memory in 16-bit chunks: <YCb><YCr><YCb><YCr>... the Y, Cb and Cr 8-bit values are pulled from the single Y-FIFO and sent out in pairs. This value is only valid when the picture is stored together. If the picture is separated into different canvases, then this bit field is ignored. |
| 15-14 | R/W | 0 | BYTES_PER_PIXEL: This value is used to determine how many bytes are associated with each pixel. 0: This value should be used if the image is stored separately (e.g. RGB or Y, Cb, Cr). 1: This value should be used if the data is 4:2:2 data stored together. In this case each pixel, YCb or YCr, is 16-bits (two bytes). 2: This value should be used if the RGB (24-bit) data is stored together. 3: reserved for future use (alpha RGB). |
| 13-12 | R/W | 0 | DDR_BURST_SIZE_CR: This value is used to control the DDR burst request size for the Cr FIFO. 0: Maximum burst = 24 64-bit values 1: Maximum burst = 32 64-bit values 2: Maximum burst = 48 64-bit values 3: Maximum burst = 64 64-bit values |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 11-10 | R/W | 0 | DDR_BURST_SIZE_CB: This value is used to control the DDR burst request size for the Cb FIFO. 0: Maximum burst = 24 64-bit values 1: Maximum burst = 32 64-bit values 2: Maximum burst = 48 64-bit values 3: Maximum burst = 64 64-bit values |
| 9-8 | R/W | 0 | DDR_BURST_SIZE_Y: This value is used to control the DDR burst request size for the Y FIFO. 0: Maximum burst = 24 64-bit values 1: Maximum burst = 32 64-bit values 2: Maximum burst = 48 64-bit values 3: Maximum burst = 64 64-bit values |
| 7 | R/W | 0 | MANUAL_START_FRAME: non-latching bit that can be used to simulate the go_field signal for simulation. |
| 6 | R/W | 0 | CHRO_RPT_LASTL_CTRL: This bit controls whether to allow VPP's chroma-repeat request. 0: Chroma-repeat pulses from VPP are ignored 1: Chroma-repeat pulses from VPP are used. |
| 5 | R/W | 0 | Unused |
| 4 | R/W | 0 | LITTLE_ENDIAN: This bit defines the endianness of the memory data . 0: Pixel data are stored big-endian in memory 1: Pixel data are stored little-endian in memory |
| 3 | R/W | 0 | Chroma_hz_avg: For chroma line output control, similar to luma_hz_avg, as below. Not used if data are stored together in one canvas. |
| 2 | R/W | 0 | Luma_hz_avg: Enable output half amount of data per line to save bandwidth. 0: Output every pixel per line 1: Output half line, each data averaged between every 2 pixels Note: For 4:2:2 mode data stored together in one canvas, only do averaging over luma data. |
| 1 | R/W | 0 | SEPARATE_EN: Set this bit to 1 if the image is in separate canvas locations. |
| 0 | R/W | 0 | ENABLE: This bit is set to 1 to enable the FIFOs and other logic. This bit can be set to 0 to cleanup and put the logic into an IDLE state. |

DI_IF0_CANVAS0 – Picture 0 0x2031

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-24 | R/W | 0 | unused |
| 23-16 | R/W | 0 | CANVAS0_ADDR2: Canvas table address for picture 0 for component 2 (Cr FIFO). This value is ignored when the picture is stored together |
| 15-8 | R/W | 0 | CANVAS0_ADDR1: Canvas table address for picture 0 for component 1 (Cb FIFO). This value is ignored when the picture is stored together |
| 7-0 | R/W | 0 | CANVAS0_ADDR0: Canvas table address for picture 0 for component 0 (Y FIFO). |

DI_IF0_LUMA_X0 – Picture 0 0x2032

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | Unused |
| 30-16 | R/W | 0 | LUMA_X_END0: Picture 0, luma X end value |
| 15 | R/W | 0 | Unused |
| 14-0 | R/W | 0 | LUMA_X_START0: Picture 0, luma X start value |

DI_IF0_LUMA_Y0 – Picture 0 0x2033

| Bit(s) | R/W | Default | Description |

| 31-29 | R/W | 0 | Unused |
| 28-16 | R/W | 0 | LUMA_Y_END0: Picture 0, luma Y end value |
| 15-13 | R/W | 0 | Unused |
| 12-0 | R/W | 0 | LUMA_Y_START0: Picture 0, luma Y start value |

DI_IF0_CHROMA_X0 – Picture 0 0x2034

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | Unused |
| 30-16 | R/W | 0 | CHROMA_X_END0: Picture 0, chroma X end value. This value is only used when the picture is not stored together. |
| 15 | R/W | 0 | Unused |
| 14-0 | R/W | 0 | CHROMA_X_START0: Picture 0, chroma X start value. This value is only used when the picture is not stored together. |

DI_IF0_CHROMA_Y0 – Picture 0 0x2035

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-29 | R/W | 0 | Unused |
| 28-16 | R/W | 0 | CHROMA_Y_END0: Picture 0, chroma Y end value. This value is only used when the picture is not stored together. |
| 15-13 | R/W | 0 | Unused |
| 12-0 | R/W | 0 | CHROMA_Y_START0: Picture 0, chroma Y start value. This value is only used when the picture is not stored together. |

DI_IF0_REPEAT_LOOP – Pictures 0 and 1 0x2036

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-24 | R/W | 0 | CHROMA_RPT_LOOP1: Repeat loop for Picture 1. Bits[6:4] = start loop pointer, bits [2:0] = end loop pointer. Bits [7] and [3] are ignored. |

| | | | |
|-------|-----|---|---|
| 23-16 | R/W | 0 | LUMA_RPT_LOOP1: Repeat loop for Picture 1. Bits[6:4] = start loop pointer, bits [2:0] = end loop pointer. Bits [7] and [3] are ignored. |
| 15-8 | R/W | 0 | CHROMA_RPT_LOOP0: Repeat loop for Picture 0. Bits[6:4] = start loop pointer, bits [2:0] = end loop pointer. Bits [7] and [3] are ignored. |
| 7-0 | R/W | 0 | LUMA_RPT_LOOP0: Repeat loop for Picture 0. Bits[6:4] = start loop pointer, bits [2:0] = end loop pointer. Bits [7] and [3] are ignored. |

DI_IF0_LUMA0_RPT_PAT – Picture 0 LUMA repeat pattern 0x2037

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-0 | R/W | 0 | Luma repeat/skip pattern for picture 0 |

| Bits | Pattern Index | Pattern description |
|-------|---------------|--|
| 31-28 | 7 | <p>Repeat/skip pattern:</p> <p>Bit[3] = 0 indicates repeat.</p> <p>Bit[3] = 1 indicates either skip, or output this line and then skip. How to interpret this bit depends on the value of the previous pattern's Bit[3]. If previous Bit[3]=0, then skip; If previous Bit[3]=1, then output this line and then skip.</p> <p>Bits[2:0] indicate the skip / repeat count.</p> <p>Blow is an example of consecutive patterns, the start line is line 0:</p> <p>{0010} Repeat this line (line 0) two more times for a total of three line reads. Proceed to next line (line 1).</p> <p>{0000} Don't repeat this line (line 1). This line will be read just once. Proceed to next line (line 2).</p> <p>{1000} Skip one line (line 2) to get to the next line (line 3). The skip implies that the next line (line 3) should be read at least once.</p> <p>{1011} Read this line (line 3) once, and then skip the next four lines to get to the next line (line 8). The skip implies that the next line (line 8) should be read at least once.</p> <p>{0100} Repeat this line (line 8) four more times for a total of five line read. Proceed to next line (line 9).</p> <p>{1001} Skip two lines to get to the next line (line 11). The skip implies that the next line (line 11) should be read at least once.</p> |
| 27-24 | 6 | See pattern definition above. |
| 23-20 | 5 | See pattern definition above. |
| 19-16 | 4 | See pattern definition above. |
| 15-12 | 3 | See pattern definition above. |
| 11-8 | 2 | See pattern definition above. |
| 7-4 | 1 | See pattern definition above. |

| | | |
|-----|---|-------------------------------|
| 3-0 | 0 | See pattern definition above. |
|-----|---|-------------------------------|

DI_IF0_CHROMA0_RPT_PAT – Picture 0 CHROMA repeat pattern 0x2038

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-0 | R/W | 0 | Chroma repeat/skip pattern for picture 0. See picture 0 luma pattern for description. This value is only used when the picture is not stored together. |

DI_IF0_DUMMY_PIXEL 0x2039

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------|
| 31-24 | R/W | 0 | Y or R dummy pixel value |
| 23-16 | R/W | 0 | Cb or G dummy pixel value |
| 15-8 | R/W | 0 | Cr or B dummy pixel value |
| 7-0 | R/W | 0 | unused |

DI_IF0_LUMA_FIFO_SIZE 0x203A

| Bit(s) | R/W | Default | Description |

| 13-10 | W/R | 0 | range map din offset mult |

| | | | |
|-----|-----|---|------------------|
| 9-1 | W/R | 0 | dout offset |
| 0 | W/R | 0 | range map enable |

Output data range conversion function:

$$Y[n] = \text{clip}(\text{Round}((Y[n] + \text{DIN_OFFSET}) * \text{RANGE_MAP_COEF}) / (1 \ll \text{RANGE_MAP_SR})) + \text{DOUT_OFFSET};$$

To perform VC-1 range reduction, set the following:

$$\text{DIN_OFFSET} = 0x180 = -128;$$

$$\text{RANGE_MAP_COEF} = \text{RANGE_MAPY} + 9$$

$$\text{RANGE_MAP_SR} = 3$$

$$\text{DOUT_OFFSET} = 0x080 = 128$$

To get the equivalent function:

$$Y[n] = \text{clip}((((Y[n] - 128) * (\text{RANGE_MAPY} + 9) + 4) \gg 3) + 128);$$

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|----------------|
| 31-23 | R/W | 0 | DIN_OFFSET |
| 22-15 | R/W | 0 | RANGE_MAP_COEF |
| 14 | R/W | 0 | unused |
| 13-10 | R/W | 0 | RANGE_MAP_SR |
| 9-1 | R/W | 0 | DOUT_OFFSET |
| 0 | R/W | 0 | RANGE_MAP_EN |

DI_IF0_GEN_REG2 0x203E

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-2 | R/W | 0 | unused |
| 1-0 | R/W | 0 | COLOR_MAP: Define color map for NV12 or NV21 mode. Only applicable when VD1_IF0_GEN_REG.SEPARATE_EN = 1. 0: NOT NV12 or NV21; 1: NV12 (CbCr); 2: NV21 (CrCb). |

DI_IF0_FMT_CTRL 0x203F

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R/W | 0 | gate_clk_en. 0=No clock gating, free-running; 1=Enable clock gating for power saving. |
| 30 | R/W | 0 | soft_rst. If true, reset formatters. |
| 29 | R/W | 0 | unused |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 28 | R/W | 0 | if true, horizontal formatter use repeating to generate pixel, otherwise use bilinear interpolation |
| 27-24 | R/W | 0 | horizontal formatter initial phase |
| 23 | R/W | 0 | horizontal formatter repeat pixel 0 enable |
| 22-21 | R/W | 0 | horizontal Y/C ratio, 00: 1:1, 01: 2:1, 10: 4:1 |
| 20 | R/W | 0 | horizontal formatter enable |
| 19 | R/W | 0 | if true, always use phase0 while vertical formatter, meaning always repeat data, no interpolation |
| 18 | R/W | 0 | if true, disable vertical formatter chroma repeat last line |
| 17 | R/W | 0 | vertical formatter dont need repeat line on phase0, 1: enable, 0: disable |
| 16 | R/W | 0 | vertical formatter repeat line 0 enable |
| 15-12 | R/W | 0 | vertical formatter skip line num at the beginning |
| 11-8 | R/W | 0 | vertical formatter initial phase |
| 7-1 | R/W | 0 | vertical formatter phase step (3.4) |

10.2.3.8 NR2 Registers

DET3D_MOTN_CFG 0x1734

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 16 | R/W | 0 | reg_det3d_intr_en : Det3d interrupt enable |
| 9:8 | R/W | 0 | reg_Det3D_Motion_Mode : U2 Different mode for Motion Calculation of Luma and Chroma: 0 : MotY, 1: $(2 * \text{MotY} + (\text{MotU} + \text{MotV})) / 4$; 2: $\text{Max}(\text{MotY}, \text{MotU}, \text{MotV})$; 3: $\text{Max}(\text{MotY}, (\text{MotU} + \text{MotV}) / 2)$ |
| 7:4 | R/W | 0 | reg_Det3D_Motion_Core_Rate : U4 K Rate to Edge (HV) details for coring of Motion Calculations, normalized to 32 |
| 3:0 | R/W | 0 | reg_Det3D_Motion_Core_Thrd : U4 2X: static coring value for Motion Detection. |

DET3D_CB_CFG 0x1735

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 7:4 | R/W | 0 | reg_Det3D_ChessBd_HV_ofst : U4, Noise immune offset for Horizotnal or vertical combing detection. |
| 3:0 | R/W | 0 | reg_Det3D_ChessBd_NHV_ofst : U4, Noise immune offset for NON-Horizotnal or vertical combing detection. |

DET3D_SPLT_CFG 0x1736

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 7:4 | R/W | 0x0 | reg_Det3D_SplitValid_ratio : U4, Ratio between max_value and the avg_value of the edge mapping for split line valid detection. The smaller of this value, the easier of the split line detected. |
| 3:0 | R/W | 0x0 | reg_Det3D_Avgldx_ratio : U4, Ratio to the avg_value of the edge mapping for split line position estimation. The smaller of this value, the more samples will be added to the estimation. |

DET3D_HV_MUTE 0x1737

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 23:20 | R/W | 0x0 | reg_Det3D_Edge_Ver_Mute : U4 X2: Horizontal pixels to be mute from H/V Edge calculation Top and Bottom border part. |
| 19:16 | R/W | 0x0 | reg_Det3D_Edge_Hor_Mute : U4 X2: Horizontal pixels to be mute from H/V Edge calculation Left and right border part. |
| 15:12 | R/W | 0x0 | reg_Det3D_ChessBd_Ver_Mute : U4 X2: Horizontal pixels to be mute from ChessBoard statistics calculation in middle part |
| 11:8 | R/W | 0x0 | reg_Det3D_ChessBd_Hor_Mute : U4 X2: Horizontal pixels to be mute from ChessBoard statistics calculation in middle part |
| 7:4 | R/W | 0x0 | reg_Det3D_STA8X8_Ver_Mute : U4 1X: Vertical pixels to be mute from 8x8 statistics calculation in each block. |
| 3:0 | R/W | 0x0 | reg_Det3D_STA8X8_Hor_Mute : U4 1X: Horizontal pixels to be mute from 8x8 statistics calculation in each block. |

DET3D_MAT_STA_P1M1 0x1738

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | R/W | 0x0 | reg_Det3D_STA8X8_P1_K0_R8 : U8 SAD to SAI ratio to decide P1, normalized to 256 (0.8) |
| 23:16 | R/W | 0x0 | reg_Det3D_STA8X8_P1_K1_R7 : U8 SAD to ENG ratio to decide P1, normalized to 128 (0.5) |
| 15:8 | R/W | 0x0 | reg_Det3D_STA8X8_M1_K0_R6 : U8 SAD to SAI ratio to decide M1, normalized to 64 (1.1) |
| 7:0 | R/W | 0x0 | reg_Det3D_STA8X8_M1_K1_R6 : U8 SAD to ENG ratio to decide M1, normalized to 64 (0.8) |

DET3D_MAT_STA_P1TH 0x1739

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 23:16 | R/W | 0x0 | reg_Det3D_STAYUV_P1_TH_L4 : U8 SAD to ENG Thrd offset to decide P1, X16 (100) |
| 15:8 | R/W | 0x0 | reg_Det3D_STAEDG_P1_TH_L4 : U8 SAD to ENG Thrd offset to decide P1, X16 (80) |
| 7:0 | R/W | 0x0 | reg_Det3D_STAMOT_P1_TH_L4 : U8 SAD to ENG Thrd offset to decide P1, X16 (48) |

DET3D_MAT_STA_M1TH 0x173a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 23:16 | R/W | 0x0 | reg_Det3D_STAYUV_M1_TH_L4 : U8 SAD to ENG Thrd offset to decide M1, X16 (100) |
| 15:8 | R/W | 0x0 | reg_Det3D_STAEDG_M1_TH_L4 : U8 SAD to ENG Thrd offset to decide M1, X16 (80) |
| 7:0 | R/W | 0x0 | reg_Det3D_STAMOT_M1_TH_L4 : U8 SAD to ENG Thrd offset to decide M1, X16 (64) |

DET3D_MAT_STA_RSFT 0x173b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 5:4 | R/W | 0x0 | reg_Det3D_STAYUV_RSHFT : U2 YUV statistics SAD and SAI calculation result right shift bits to accommodate the 12bits clipping: 0 : mainly for images <=720x480: 1: mainly for images <=1366x768: 2: mainly for images <=1920X1080: 2; 3: other higher resolutions |
| 3:2 | R/W | 0x0 | reg_Det3D_STAEDG_RSHFT : U2 Horizontal and Vertical Edge Statistics SAD and SAI calculation result right shift bits to accommodate the 12bits clipping: 0 : mainly for images <=720x480: 1: mainly for images <=1366x768: 2: mainly for images <=1920X1080: 2; 3: other higher resolutions |
| 1:0 | R/W | 0x0 | reg_Det3D_STAMOT_RSHFT : U2 Motion SAD and SAI calculation result right shift bits to accommodate the 12bits clipping: 0 : mainly for images <=720x480: 1: mainly for images <=1366x768: 2: mainly for images <=1920X1080: 2; 3: other higher resolutions |

DET3D_MAT_SYMTC_TH 0x173c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:24 | R/W | 0x0 | reg_Det3D_STALUM_symtc_Th : U8 threshold to decide if the Luma statistics is TB or LR symmetric. |
| 23:16 | R/W | 0x0 | reg_Det3D_STACHR_symtc_Th : U8 threshold to decide if the Chroma (UV) statistics is TB or LR symmetric. |
| 15:8 | R/W | 0x0 | reg_Det3D_STAEDG_symtc_Th : U8 threshold to decide if the Horizontal and Vertical Edge statistics is TB or LR symmetric. |
| 7:0 | R/W | 0x0 | reg_Det3D_STAMOT_symtc_Th : U8 threshold to decide if the Motion statistics is TB or LR symmetric. |

DET3D_RO_DET_CB_HOR 0x173d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:16 | R.O | 0x0 | RO_Det3D_ChessBd_NHor_value : U16 X64: number of Pixels of Horizontally Surely NOT matching Chessboard pattern. |
| 15:0 | R.O | 0x0 | RO_Det3D_ChessBd_Hor_value : U16 X64: number of Pixels of Horizontally Surely matching Chessboard pattern. |

DET3D_RO_DET_CB_VER 0x173e

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:16 | R.O | 0x0 | RO_Det3D_ChessBd_NVer_value : U16 X64: number of Pixels of Vertically Surely NOT matching Chessboard pattern. |
| 15:0 | R.O | 0x0 | RO_Det3D_ChessBd_Ver_value : U16 X64: number of Pixels of Vertically Surely matching Chessboard pattern. |

DET3D_RO_SPLT_HT 0x173f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 24 | R.O | 0x0 | RO_Det3D_Split_HT_valid : U1 horizontal LR split border detected valid signal for top half picture |
| 20:16 | R.O | 0x0 | RO_Det3D_Split_HT_pxnum : U5 number of pixels included for the LR split position estimation for top half picture |
| 9:0 | R.O | 0x0 | RO_Det3D_Split_HT_idxX4 : S10 X4: horizontal pixel shifts of LR split position to the (ColMax/2) for top half picture |

NR2 REG DEFINE BEGIN////

NR2_MET_NM_CTRL 0x1745

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 28 | R/W | 0x0 | reg_NM_reset : Reset to the status of the Loop filter. |
| 27:24 | R/W | 0x0 | reg_NM_calc_length : Length mode of the Noise measurement sample number for statistics. 0 : 256 samples; 1: 512 samples; 2: 1024 samples; j-X: 2^(8+x) samples |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 23:20 | R/W | 0x0 | reg_NM_inc_step : Loop filter input gain increase step. |
| 19:16 | R/W | 0x0 | reg_NM_dec_step : Loop filter input gain decrease step. |
| 15:8 | R/W | 0x0 | reg_NM_YHPmot_thrd : Luma channel HP portion motion for condition of pixels included in Luma Noise measurement. |
| 7:0 | R/W | 0x0 | reg_NM_CHPmot_thrd : Chroma channel HP portion motion for condition of pixels included in Chroma Noise measurement. |

NR2_MET_NM_YCTRL 0x1746

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:28 | R/W | 0x0 | reg_NM_YPLL_target : Target rate of NM_Ynoise_thrd to mean of the Luma Noise |
| 27:24 | R/W | 0x0 | reg_NM_YLPmot_thrd : Luma channel LP portion motion for condition of pixels included in Luma Noise measurement. |
| 23:16 | R/W | 0x0 | reg_NM_YHPmot_thrd_min : Minimum threshold for Luma channel HP portion motion to decide whether the pixel will be included in Luma noise measurement. |
| 15:8 | R/W | 0x0 | reg_NM_YHPmot_thrd_max : Maximum threshold for Luma channel HP portion motion to decide whether the pixel will be included in Luma noise measurement. |
| 7:0 | R/W | 0x0 | reg_NM_Ylock_rate : Rate to decide whether the Luma noise measurement is lock or not. |

NR2_MET_NM_CCTRL 0x1747

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:28 | R/W | 0x0 | reg_NM_CPLL_target : Target rate of NM_Cnoise_thrd to mean of the Chroma Noise |
| 27:24 | R/W | 0x0 | reg_NM_CLPmot_thrd : Chroma channel LP portion motion for condition of pixels included in Chroma Noise measurement. |
| 23:16 | R/W | 0x0 | reg_NM_CHPmot_thrd_min : Minimum threshold for Chroma channel HP portion motion to decide whether the pixel will be included in Chroma noise measurement. |
| 15:8 | R/W | 0x0 | reg_NM_CHPmot_thrd_max : Maximum threshold for Chroma channel HP portion motion to decide whether the pixel will be included in Chroma noise measurement. |
| 7:0 | R/W | 0x0 | reg_NM_Clock_rate : Rate to decide whether the Chroma noise measurement is lock or not; |

NR2_MET_NM_TNR 0x1748

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 25 | R.O | 0x0 | ro_NM_TNR_Ylock : Read-only register to tell if Luma channel noise measurement is locked or not. |
| 24 | R.O | 0x0 | ro_NM_TNR_Clock : Read-only register to tell if Chroma channel noise measurement is locked or not. |
| 23:12 | R.O | 0x0 | ro_NM_TNR_Ylevel : Read-only register to give Luma channel noise level. It was 16x of pixel difference in 8 bits of YHPmot. |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 11:0 | R.O | 0x0 | ro_NM_TNR_Clevel : Read-only register to give Chroma channel noise level. It was 16x of pixel difference in 8 bits of CHPmot. |

NR2_MET_NMFRM_TNR_YLEV 0x1749

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 28:0 | R.O | 0x0 | ro_NMFrm_TNR_Ylevel : Frame based Read-only register to give Luma channel noise level within one frame/field. |

NR2_MET_NMFRM_TNR_YCNT 0x174a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 23:0 | R.O | 0x0 | ro_NMFrm_TNR_Ycount : Number of Luma channel pixels included in Frame/Field based noise level measurement. |

NR2_MET_NMFRM_TNR_CLEV 0x174b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 28:0 | R.O | 0x0 | ro_NMFrm_TNR_Clevel : Frame based Read-only register to give Chroma channel noise level within one frame/field. |

NR2_MET_NMFRM_TNR_CCNT 0x174c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 23:0 | R.O | 0x0 | ro_NMFrm_TNR_Ccount : Number of Chroma channel pixels included in Frame/Field based noise level measurement. |

NR2_3DEN_MODE 0x174d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------|
| 6:4 | R/W | 0x0 | Blend_3dnr_en_r : |
| 2:0 | R/W | 0x0 | Blend_3dnr_en_l : |

NR2_IIR_CTRL 0x174e

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 15:14 | R/W | 0x0 | reg_LP_IIR_8bit_mode : LP IIR membitwidth mode:0: 10bits will be store in memory;1: 9bits will be store in memory; 2 : 8bits will be store in memory;3: 7bits will be store in memory; |
| 13:12 | R/W | 0x0 | reg_LP_IIR_mute_mode : Mode for the LP IIR mute, |
| 11:8 | R/W | 0x0 | reg_LP_IIR_mute_thrd : Threshold of LP IIR mute to avoid ghost: |
| 7:6 | R/W | 0x0 | reg_HP_IIR_8bit_mode : IIR membitwidth mode:0: 10bits will be store in memory;1: 9bits will be store in memory; 2 : 8bits will be store in memory;3: 7bits will be store in memory; |
| 5:4 | R/W | 0x0 | reg_HP_IIR_mute_mode : Mode for theLP IIR mute |
| 3:0 | R/W | 0x0 | reg_HP_IIR_mute_thrd : Threshold of HP IIR mute to avoid ghost |

NR2_SNR_SAD_CFG 0x1751

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 12 | R/W | 0x1 | reg_MATNR_SNR_SAD_CenRPL : U1, Enable signal for Current pixel position SAD to be replaced by SAD_min.0: do not replace Current pixel position SAD by SAD_min;1: do replacements |
| 11:8 | R/W | 0x3 | reg_MATNR_SNR_SAD_coring : Coring value of the intra-frame SAD. sum = (sum - reg_MATNR_SNR_SAD_coring);sum = (sum<0) ? 0: (sum>255)? 255: sum; |
| 6:5 | R/W | 0x1 | reg_MATNR_SNR_SAD_WinMod : Unsigned, Intra-frame SAD matching window mode:0: 1x1; 1: [1 1 1] 2: [1 2 1]; 3: [1 2 2 1]; |
| 4:0 | R/W | 0x1 | Sad_coef_num : Sad coefficient |

NR2_MATNR_SNR_OS 0x1752

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 7:4 | R/W | 0x8 | reg_MATNR_SNR_COS : SNR Filter overshoot control margin for UV channel (X2 to u10 scale) |
| 3:0 | R/W | 0xd | reg_MATNR_SNR_YOS : SNR Filter overshoot control margin for luma channel (X2 to u10 scale) |

NR2_MATNR_SNR_NRM_CFG 0x1753

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 23:16 | R/W | 0x40 | reg_MATNR_SNR_NRM_ofst : Edge based SNR boosting normalization offset to SAD_max; |
| 15:8 | R/W | 0xff | reg_MATNR_SNR_NRM_max : Edge based SNR boosting normalization Max value |
| 7:0 | R/W | 0x0 | reg_MATNR_SNR_NRM_min : Edge based SNR boosting normalization Min value |

NR2_MATNR_SNR_NRM_GAIN 0x1754

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 15:8 | R/W | 0x0 | reg_MATNR_SNR_NRM_Cgain : Edge based SNR boosting normalization Gain for Chrm channel (norm 32 as 1) |
| 7:0 | R/W | 0x20 | reg_MATNR_SNR_NRM_Ygain : Edge based SNR boosting normalization Gain for Luma channel (norm 32 as 1) |

NR2_MATNR_SNR_LPF_CFG 0x1755

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 23:16 | R/W | 0xc | reg_MATNR_SNR_LPF_SADmaxTH : U8, Threshold to SADmax to use TNRLPF to replace SNRLPF. i.e.if (SAD_max<reg_MATNR_SNR_LPF_SADmaxTH) SNRLPF_yuv[k] = TNRLPF_yuv[k]; |
| 13:11 | R/W | 0x2 | reg_MATNR_SNR_LPF_Cmode : LPF based SNR filtering mode on CHRM channel: 0 : gradient LPF [1 1]2, 1: gradient LPF [2 1 1]4; 2: gradient LPF [3 3 2]8; 3: gradient LPF [5 4 4 3]16; 4 : TNRLPF; 5 : CurLPF3x3_yuv[]; 6: CurLPF3o3_yuv[] 7: CurLPF3x5_yuv[] |

|-------|-----|-----|---|
| 10: 8 | R/W | 0x2 | reg_MATNR_SNR_LPF_Ymode : LPF based SNR filtering mode on LUMA channel: 0 : gradient LPF //Bit [1 1]/2, 1: gradient LPF [2 1 1]/4; 2: gradient LPF [3 3 2]/8;3: gradient LPF [5 4 4 3]/16; 4 : TNRLPF; 5 : CurLPF3x3_yuv[]; 6: CurLPF3x3_yuv[] 7: CurLPF3x5_yuv[] |
| 7:4 | R/W | 0x6 | reg_MATNR_SNR_LPF_SADmin3TH : Offset threshold to SAD_min to Discard SAD_min3 corresponding pixel in LPF SNR filtering. (X8 to u8 scale) |
| 3:0 | R/W | 0x4 | reg_MATNR_SNR_LPF_SADmin2TH : Offset threshold to SAD_min to Discard SAD_min2 corresponding pixel in LPF SNR filtering. (X8 to u8 scale) |

NR2_MATNR_SNR_USF_GAIN 0x1756

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 15:8 | R/W | 0x0 | reg_MATNR_SNR_USF_Cgain : Un-sharp (HP) compensate back Chrm portion gain, (norm 64 as 1) |
| 7:0 | R/W | 0x0 | reg_MATNR_SNR_USF_Ygain : Un-sharp (HP) compensate back Luma portion gain, (norm 64 as 1) |

NR2_MATNR_SNR_EDGE2B 0x1757

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 15:8 | R/W | 0x80 | reg_MATNR_SNR_Edge2Beta_ofst : U8, Offset for Beta based on Edge. |
| 7:0 | R/W | 0x10 | reg_MATNR_SNR_Edge2Beta_gain : U8. Gain to SAD_min for Beta based on Edge. (norm 16 as 1) |

NR2_MATNR_BETA_EGAIN 0x1758

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 15:8 | R/W | 0x20 | reg_MATNR_CBeta_Egain : U8, Gain to Edge based Beta for Chrm channel. (normalized to 32 as 1) |
| 7:0 | R/W | 0x20 | reg_MATNR_YBeta_Egain : U8, Gain to Edge based Beta for Luma channel. (normalized to 32 as 1) |

NR2_MATNR_BETA_BRT 0x1759

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:28 | R/W | 0x0 | reg_MATNR_beta_BRT_limt_hi : U4, Beta adjustment based on Brightness high side Limit. (X16 to u8 scale) |
| 27:24 | R/W | 0x0 | reg_MATNR_beta_BRT_slop_hi : U4, Beta adjustment based on Brightness high side slope. Normalized to 16 as 1 |
| 23:16 | R/W | 0xa0 | reg_MATNR_beta_BRT_thrd_hi : U8, Beta adjustment based on Brightness high threshold.(u8 scale) |
| 15:12 | R/W | 0x6 | reg_MATNR_beta_BRT_limt_lo : U4, Beta adjustment based on Brightness low side Limit. (X16 to u8 scale) |

| | | | |
|------|-----|------|--|
| 11:8 | R/W | 0x6 | reg_MATNR_beta_BRT_slop_lo : U4, Beta adjustment based on Brightness low side slope. Normalized to 16 as 1 |
| 7:0 | R/W | 0x64 | reg_MATNR_beta_BRT_thr_lo : U8, Beta adjustment based on Brightness low threshold.(u8 scale) |

NR2_MATNR_XBETA_CFG 0x175a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 19:18 | R/W | 0x0 | reg_MATNR_CBeta_use_mode : U2, Beta options (mux) from beta_motion and beta_edge for Chrm channel; |
| 17:16 | R/W | 0x0 | reg_MATNR_YBeta_use_mode : U2, Beta options (mux) from beta_motion and beta_edge for Luma channel; |
| 15: 8 | R/W | 0x0 | reg_MATNR_CBeta_Ofst : U8, Offset to Beta for Chrm channel.(after beta_edge and beta_motion mux) |
| 7: 0 | R/W | 0x0 | reg_MATNR_YBeta_Ofst : U8, Offset to Beta for Luma channel.(after beta_edge and beta_motion mux) |

NR2_MATNR_YBETA_SCL 0x175b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:24 | R/W | 0x3c | reg_MATNR_YBeta_scale_min : U8, Final step Beta scale low limit for Luma channel; |
| 23:16 | R/W | 0xff | reg_MATNR_YBeta_scale_max : U8, Final step Beta scale high limit for Luma channel; |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 15:0 | R.O | 0x0 | RO_ChrU_TB_score : S2*8 CHRU statistics Top/Bottom decision score for each band (8bands Horizontally) |
| 7:0 | R.O | 0x0 | RO_ChrU_TB_symtc : CHRU statistics Top/Bottom pure symmetric for each band (8bands Horizontally) |
| 4:0 | R.O | 0x0 | RO_ChrU_TB_sum : Total score of 8x8 ChrU statistics for TB like decision |

DET3D_RO_MAT_CHRV_LR 0x1787

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 15:0 | R.O | 0x0 | RO_ChrV_LR_score : S2*8 CHRU statistics left right decision score for each band (8bands vertically) |
| 7:0 | R.O | 0x0 | RO_ChrV_LR_symtc : CHRV statistics left right pure symmetric for each band (8bands vertically) |
| 4:0 | R.O | 0x0 | RO_ChrV_LR_sum : Total score of 8x8 ChrV statistics for LR like decision |

DET3D_RO_MAT_CHRV_TB 0x1788

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 15:0 | R.O | 0x0 | RO_ChrV_TB_score : CHRV statistics Top/Bottom decision score for each band (8bands Horizontally) |
| 7:0 | R.O | 0x0 | RO_ChrV_TB_symtc : CHRV statistics Top/Bottom pure symmetric for each band (8bands Horizontally) |
| 4:0 | R.O | 0x0 | RO_ChrV_TB_sum : Total score of 8x8 ChrV statistics for TB like decision |

DET3D_RO_MAT_HEDG_LR 0x1789

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 15:0 | R.O | 0x0 | RO_Hedg_LR_score : Horizontal Edge statistics left right decision score for each band (8bands vertically) |
| 7:0 | R.O | 0x0 | RO_Hedg_LR_symtc : Horizontal Edge statistics left right pure symmetric for each band (8bands vertically) |
| 4:0 | R.O | 0x0 | RO_Hedg_LR_sum : Total score of 8x8 Hedg statistics for LR like decision |

DET3D_RO_MAT_HEDG_TB 0x178a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 15:0 | R.O | 0x0 | RO_Hedg_TB_score : Horizontal Edge statistics Top/Bottom decision score for each band (8bands Horizontally) |
| 7:0 | R.O | 0x0 | RO_Hedg_TB_symtc : Horizontal Edge statistics Top/Bottom pure symmetric for each band (8bands Horizontally) |
| 4:0 | R.O | 0x0 | RO_Hedg_TB_sum : Total score of 8x8 Hedg statistics for TB like decision |

DET3D_RO_MAT_VEDG_LR 0x178b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 15:0 | R.O | 0x0 | RO_Vedg_LR_score : Vertical Edge statistics left right decision score for each band (8bands vertically) |
| 7:0 | R.O | 0x0 | RO_Vedg_LR_symtc : Vertical Edge statistics left right pure symmetric for each band (8bands vertically) |
| 4:0 | R.O | 0x0 | RO_Vedg_LR_sum : Total score of 8x8 Vedg statistics for LR like decision |

DET3D_RO_MAT_VEDG_TB 0x178c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 15:0 | R.O | 0x0 | RO_Vedg_TB_score : Vertical Edge statistics Top/Bottom decision score for each band (8bands Horizontally) |
| 7:0 | R.O | 0x0 | RO_Vedg_TB_symtc : Vertical Edge statistics Top/Bottom pure symmetric for each band (8bands Horizontally) |
| 4:0 | R.O | 0x0 | RO_Vedg_TB_sum : Total score of 8x8 Vedg statistics for TB like decision |

DET3D_RO_MAT_MOTN_LR 0x178d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 15:0 | R.O | 0x0 | RO_Motn_LR_score : Motion statistics left right decision score for each band (8bands vertically) |
| 7:0 | R.O | 0x0 | RO_Motn_LR_symtc : Motion statistics left right pure symmetric for each band (8bands vertically) |
| 4:0 | R.O | 0x0 | RO_Motn_LR_sum : Total score of 8x8 Motion statistics for LR like decision |

DET3D_RO_MAT_MOTN_TB 0x178e

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 15:0 | R.O | 0x0 | RO_Motn_TB_score : Motion statistics Top/Bottom decision score for each band (8bands Horizontally) |
| 7:0 | R.O | 0x0 | RO_Motn_TB_symtc : Motion statistics Top/Bottom pure symmetric for each band (8bands Horizontally) |
| 4:0 | R.O | 0x0 | RO_Motn_TB_sum : Total score of 8x8 Motion statistics for TB like decision |

DET3D_RO_FRM_MOTN 0x178f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 15:0 | R.O | 0x0 | RO_Det3D_Frame_Motion : U16 frame based motion value sum for still image decision in FW. mat ram read enter addr |

DET3D_RAMRD_ADDR_PORT 0x179a**DET3D_RAMRD_DATA_PORT 0x179b****NR2_CFR_PARA_CFG0 0x179c**

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 8 | R/W | 0x0 | reg_CFR_CurDif_luma_mode : Current Field Top/Bot line Luma difference calculation mode |
| 7:6 | R/W | 0x0 | reg_MACFR_frm_phase : U2 This will be a field based phase register that need to be set by FW phase to phase: this will be calculated based on dhdr_phase of the specific line of this frame. u1 : dhdr_phase=1, center line is DB in current line; dhdr_phase=2, center line is Dr in current line; |
| 5:4 | R/W | 0x0 | reg_CFR_CurDif_tran_mode : U2 Current Field Top/Bot line Luma/Chroma transition level calculation mode, |
| 3:2 | R/W | 0x0 | reg_CFR_alpha_mode : U2 Alpha selection mode for CFR block from curAlp and motAlp i.e. 0: motAlp; 1: (motAlp+curAlp)/2; 2: min(motAlp,curAlp); 3: max(motAlp,curAlp); |
| 1:0 | R/W | 0x0 | reg_CFR_Motion_Luma_mode : U2 LumaMotion Calculation mode for MA-CFR. 0: top/bot Lumma motion; 1: middle Luma Motion 2: top/bot + middle motion; 3: max(top/tot motion, middle motion) |

NR2_CFR_PARA_CFG1 0x179d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 23:16 | R/W | 0x0 | reg_CFR_alpha_gain : gain to map muxed curAlp and motAlp to alpha that will be used for final blending. |
| 15: 8 | R/W | 0x0 | reg_CFR_Motion_ofst : Offset to Motion to calculate the motAlp, e.g:motAlp= reg_CFR_Motion_ofst- Motion;This register can be seen as the level of motion that we consider it at moving. |
| 7: 0 | R/W | 0x0 | reg_CFR_CurDif_gain : gain to CurDif to map to alpha, normalized to 32; |

NR3_MODE 0x2ff0

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 5 | R/W | 0x0 | reg_3dnr_nr3_vtxt_mode : ; |

10.2.3.9 LBUF Registers

LBUF_TOP_CTRL 0x2fff

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 25:20 | R/W | 6'd0 | gate clk control of line buf . LBUF_TOP_CTRL[25:24] is the clk control of current line linebuffer. LBUF_TOP_CTRL[23:22] is the clk control of previous one line.linebuffer, LBUF_TOP_CTRL[21:20] is the clk control of previous two line linebuffer. |
| 17 | R/W | 1'b1 | lbuf_fmt444_mode; format of data store in linebuf ,high mean store 444 data into linebuf |
| 16 | R/W | 1'b1 | lbuf_line5_mode;Store 5 line or 3 lines in linebuf ,high means 5 lines |
| 12:0 | R/W | 13'd342 | pre_lbuf_size: size of linebuf |

10.2.3.10 DI_SCALE & HDR Registers

DI_SCO_FIFO_CTRL 0x374e

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------|
| 28:0 | R/W | 0x0 | sco_fifo_ctrl |

DI_SC_TOP_CTRL 0x374f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R.O | 0 | prog_interlace : // unsigned , default = 0x0 |
| 30 | R/W | 0 | path_sel : // unsigned , default = 0x0 |
| 29 | R/W | 0 | go_field_sel : // unsigned , default = 0x0 |
| 28 | R/W | 0 | sw_resets : // unsigned , default = 0x0 |
| 27 | R/W | 0 | pps_dummy_data_mode : // unsigned , default = 0x0 |
| 26 | R/W | 0 | field_inv : // unsigned , default = 0x0 |
| 25 | R/W | 0 | reg_field : // unsigned , default = 0x0 |
| 5:4 | R/W | 0 | hdr_gclk_ctrl : // unsigned , default = 0x0 |
| 1 | R/W | 0 | reg_gclk_ctrl : // unsigned , default = 0x0 |

DI_SC_DUMMY_DATA 0x3750

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 29:20 | R/W | 0 | VD1_SC_Y : // unsigned , default = 0x10,dummy data used in the VD1 scaler,according VPP_DOLBY_CTRL[17] 1:set 8bit value 2:set 10bit value |
| 19:10 | R/W | 0 | VD1_SC_CB : // unsigned , default = 0x80,dummy data used in the VD1 scaler,according VPP_DOLBY_CTRL[17] 1:set 8bit value 2:set 10bit value |
| 9 :0 | R/W | 0 | VD1_SC_CR : // unsigned , default = 0x80,dummy data used in the VD1 scaler,according VPP_DOLBY_CTRL[17] 1:set 8bit value 2:set 10bit value |

DI_SC_LINE_IN_LENGTH 0x3751

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 13:0 | R/W | 14 | line_in_length : // unsigned , default = 14'd1920,VD1 scaler input hsize |

DI_SC_PIC_IN_HEIGHT 0x3752

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 12:0 | R/W | 0x1fff | line_in_height : // unsigned , default = 13'h1fff,VD1 scaler input vsize |

DI_SC_COEF_IDX 0x3753

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 15 | R/W | 0 | index_inc : // unsigned , default = 0x0 ,index increment, if bit9 = 1 then (0: index increase 1, 1: index increase 2) else (index increase 2) |
| 14 | R/W | 0 | rd_cbus_coef_en : // unsigned , default = 0x0 ,1: read coef through cbus enable, just for debug purpose in case when we wanna check the coef in ram in correct or not |
| 13 | R/W | 0 | vf_sep_coef_en : // unsigned , default = 0x0 ,if true, vertical separated coef enable |
| 9 | R/W | 0 | high_reso_en : // unsigned , default = 0x0 ,if true, use 9bit resolution coef, other use 8bit resolution coef |
| 8:7 | R/W | 0 | type_index : // unsigned , default = 0x0 ,type of index, 00: vertical coef, 01: vertical chroma coef, 10: horizontal coef, 11: reserved |
| 6:0 | R/W | 0 | coef_index : // unsigned , default = 0x0 ,coef index |

DI_SC_COEF 0x3754

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | R/W | 0 | coef0 : //signed , default = 0x0 , coefficients for vertical filter and horizontal filter |
| 23:16 | R/W | 0 | coef1 : //signed , default = 0x0 , coefficients for vertical filter and horizontal filter |
| 15:8 | R/W | 0 | coef2 : //signed , default = 0x0 , coefficients for vertical filter and horizontal filter |
| 7 :0 | R/W | 0 | coef3 : //signed , default = 0x0 , coefficients for vertical filter and horizontal filter |

DI_VSC_REGION12_STARTP 0x3755

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 28:16 | R/W | 0 | region1_startp : //unsigned , default = 0 ,region1 startp |
| 12:0 | R/W | 0 | region2_startp : //unsigned , default = 0 ,region2 startp |

DI_VSC_REGION34_STARTP 0x3756

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 28:16 | R/W | 0 | region3_startp : //unsigned , default = 0x0438,region3 startp |
| 12:0 | R/W | 0 | region4_startp : //unsigned , default = 0x0438,region4 startp |

DI_VSC_REGION4_ENDP 0x3757

| Bit(s) | R/W | Default | Description |

10.2.3.17 VD1 Path vd_rmem_if0 Registers**VD1_IF0_GEN_REG 0x3200**

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | ENABLE_FREE_CLK. 0: Gated clock for power saving 1: Free-running clock to drive logic |
| 30 | R/W | 0 | SW_RESET: Write 1 to this bit to generate a pulse to reset everything except registers. |
| 29 | R/W | 0 | RESET_ON_GO_FIELD: Define whether to reset state machines on go_field pulse. 0: No reset on go_field 1: go_field reset everything except registers |
| 28 | R/W | 0 | URGENT_CHROMA: Set urgent level for chroma fifo request from DDR. 0: Non urgent 1: Urgent |
| 27 | R/W | 0 | URGENT_LUMA: Set urgent level for luma fifo request from DDR. 0: Non urgent 1: Urgent |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 26 | R/W | 0 | Chroma_end_at_last_line: For chroma line, similar to luma_end_at_last_line, as below. Not used if data are stored together in one canvas. |
| 25 | R/W | 0 | Luma_end_at_last_line: Control whether continue outputting luma line past last line. 0: Repeat the last line or dummy pixels, after past the last line 1: Stop outputting data, once past the last line. |
| 24-19 | R/W | 4 | Hold_lines: After go_field, the number of lines to hold before the module is enabled. |
| 18 | R/W | 0 | LAST_LINE: This bit controls whether we simply repeat the last line or we push dummy pixels. '1' tells the state-machines to repeat the last line using the dummy pixels defined in the register below. '0' indicates that the state-machine should re-read the last line of real data. |
| 17 | R | 0 | Busy status of the state-machines. '1' = busy, '0' = idle |
| 16 | R/W | 0 | DEMUX_MODE: 0 = 4:2:2, 1 = RGB (24-bit). This value is used to control the demuxing logic when the picture is stored together. When a picture is stored together, the data is read into a single FIFO (the Y FIFO) and must be demultiplexed into the "drain" outputs. In the case of 4:2:2 the data is assumed to be stored in memory in 16-bit chunks: <YCb><YCr><YCb><YCr>,... the Y, Cb and Cr 8-bit values are pulled from the single Y-FIFO and sent out in pairs. This value is only valid when the picture is stored together. If the picture is separated into different canvases, then this bit field is ignored. |
| 15-14 | R/W | 0 | BYTES_PER_PIXEL: This value is used to determine how many bytes are associated with each pixel. 0: This value should be used if the image is stored separately (e.g. RGB or Y, Cb, Cr). 1: This value should be used if the data is 4:2:2 data stored together. In this case each pixel, YCb or YCr, is 16-bits (two bytes). 2: This value should be used if the RGB (24-bit) data is stored together. 3: reserved for future use (alpha RGB). |
| 13-12 | R/W | 0 | DDR_BURST_SIZE_CR: This value is used to control the DDR burst request size for the Cr FIFO. 0: Maximum burst = 24 64-bit values 1: Maximum burst = 32 64-bit values 2: Maximum burst = 48 64-bit values 3: Maximum burst = 64 64-bit values |
| 11-10 | R/W | 0 | DDR_BURST_SIZE_CB: This value is used to control the DDR burst request size for the Cb FIFO. 0: Maximum burst = 24 64-bit values 1: Maximum burst = 32 64-bit values 2: Maximum burst = 48 64-bit values 3: Maximum burst = 64 64-bit values |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 9-8 | R/W | 0 | DDR_BURST_SIZE_Y: This value is used to control the DDR burst request size for the Y FIFO. 0: Maximum burst = 24 64-bit values 1: Maximum burst = 32 64-bit values 2: Maximum burst = 48 64-bit values 3: Maximum burst = 64 64-bit values |
| 7 | R/W | 0 | MANUAL_START_FRAME: non-latching bit that can be used to simulate the go_field signal for simulation. |
| 6 | R/W | 0 | CHRO_RPT_LASTL_CTRL: This bit controls whether to allow VPP's chroma-repeat request. 0: Chroma-repeat pulses from VPP are ignored 1: Chroma-repeat pulses from VPP are used. |
| 5 | R/W | 0 | Unused |
| 4 | R/W | 0 | LITTLE_ENDIAN: This bit defines the endianness of the memory data . 0: Pixel data are stored big-endian in memory 1: Pixel data are stored little-endian in memory |
| 3 | R/W | 0 | Chroma_hz_avg: For chroma line output control, similar to luma_hz_avg, as below. Not used if data are stored together in one canvas. |
| 2 | R/W | 0 | Luma_hz_avg: Enable output half amount of data per line to save bandwidth. 0: Output every pixel per line 1: Output half line, each data averaged between every 2 pixels Note: For 4:2:2 mode data stored together in one canvas, only do averaging over luma data. |
| 1 | R/W | 0 | SEPARATE_EN: Set this bit to 1 if the image is in separate canvas locations. |
| 0 | R/W | 0 | ENABLE: This bit is set to 1 to enable the FIFOs and other logic. This bit can be set to 0 to cleanup and put the logic into an IDLE state. |

VD1_IF0_CANVAS0 – Picture 0 0x3201

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-24 | R/W | 0 | unused |
| 23-16 | R/W | 0 | CANVAS0_ADDR2: Canvas table address for picture 0 for component 2 (Cr FIFO). This value is ignored when the picture is stored together |
| 15-8 | R/W | 0 | CANVAS0_ADDR1: Canvas table address for picture 0 for component 1 (Cb FIFO). This value is ignored when the picture is stored together |
| 7-0 | R/W | 0 | CANVAS0_ADDR0: Canvas table address for picture 0 for component 0 (Y FIFO). |

VD1_IF0_CANVAS1 – Picture 1 0x3202

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31-24 | R/W | 0 | unused |

| | | | |
|-------|-----|---|--|
| 23-16 | R/W | 0 | CANVAS1_ADDR2: Canvas table address for picture 1 for component 2 (Cr FIFO). This value is ignored when the picture is stored together |
| 15-8 | R/W | 0 | CANVAS1_ADDR1: Canvas table address for picture 1 for component 1 (Cb FIFO). This value is ignored when the picture is stored together |
| 7-0 | R/W | 0 | CANVAS1_ADDR0: Canvas table address for picture 1 for component 0 (Y FIFO). |

VD1_IF0_LUMA_X0 – Picture 0 0x3203

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | Unused |
| 30-16 | R/W | 0 | LUMA_X_END0: Picture 0, luma X end value |

| 31-29 | R/W | 0 | Unused |
| 28-16 | R/W | 0 | LUMA_Y_END1: Picture 1, luma Y end value |
| 15-13 | R/W | 0 | Unused |
| 12-0 | R/W | 0 | LUMA_Y_START1: Picture 1, luma Y start value |

VD1_IF0_CHROMA_X1 – Picture 1 0x3209

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | Unused |
| 30-16 | R/W | 0 | CHROMA_X_END1: Picture 1, chroma X end value. This value is only used when the picture is not stored together. |
| 15 | R/W | 0 | Unused |
| 14-0 | R/W | 0 | CHROMA_X_START1: Picture 1, chroma X start value. This value is only used when the picture is not stored together. |

VD1_IF0_CHROMA_Y1 – Picture 1 0x320A

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-29 | R/W | 0 | Unused |
| 28-16 | R/W | 0 | CHROMA_Y_END1: Picture 1, chroma Y end value. This value is only used when the picture is not stored together. |
| 15-13 | R/W | 0 | Unused |
| 12-0 | R/W | 0 | CHROMA_Y_START1: Picture 1, chroma Y start value. This value is only used when the picture is not stored together. |

VD1_IF0_REPEAT_LOOP – Pictures 0 and 1 0x320B

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
|--------|-----|---------|-------------|

| | | | |
|-------|-----|---|---|
| 31-24 | R/W | 0 | CHROMA_RPT_LOOP1: Repeat loop for Picture 1. Bits[6:4] = start loop pointer, bits [2:0] = end loop pointer. Bits [7] and [3] are ignored. |
| 23-16 | R/W | 0 | LUMA_RPT_LOOP1: Repeat loop for Picture 1. Bits[6:4] = start loop pointer, bits [2:0] = end loop pointer. Bits [7] and [3] are ignored. |
| 15-8 | R/W | 0 | CHROMA_RPT_LOOP0: Repeat loop for Picture 0. Bits[6:4] = start loop pointer, bits [2:0] = end loop pointer. Bits [7] and [3] are ignored. |
| 7-0 | R/W | 0 | LUMA_RPT_LOOP0: Repeat loop for Picture 0. Bits[6:4] = start loop pointer, bits [2:0] = end loop pointer. Bits [7] and [3] are ignored. |

VD1_IF0_LUMA0_RPT_PAT – Picture 0 LUMA repeat pattern 0x320C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-0 | R/W | 0 | Luma repeat/skip pattern for picture 0 |

| Bits | Pattern Index | Pattern description |
|-------|---------------|--|
| 31-28 | 7 | <p>Repeat/skip pattern:</p> <p>Bit[3] = 0 indicates repeat.</p> <p>Bit[3] = 1 indicates either skip, or output this line and then skip. How to interpret this bit depends on the value of the previous pattern's Bit[3]. If previous Bit[3]=0, then skip; If previous Bit[3]=1, then output this line and then skip.</p> <p>Bits[2:0] indicate the skip / repeat count.</p> <p>Blow is an example of consecutive patterns, the start line is line 0:</p> <p>{0010} Repeat this line (line 0) two more times for a total of three line reads. Proceed to next line (line 1).</p> <p>{0000} Don't repeat this line (line 1). This line will be read just once. Proceed to next line (line 2).</p> <p>{1000} Skip one line (line 2) to get to the next line (line 3). The skip implies that the next line (line 3) should be read at least once.</p> <p>{1011} Read this line (line 3) once, and then skip the next four lines to get to the next line (line 8). The skip implies that the next line (line 8) should be read at least once.</p> <p>{0100} Repeat this line (line 8) four more times for a total of five line read. Proceed to next line (line 9).</p> <p>{1001} Skip two lines to get to the next line (line 11). The skip implies that the next line (line 11) should be read at least once.</p> |
| 27-24 | 6 | See pattern definition above. |
| 23-20 | 5 | See pattern definition above. |
| 19-16 | 4 | See pattern definition above. |
| 15-12 | 3 | See pattern definition above. |
| 11-8 | 2 | See pattern definition above. |
| 7-4 | 1 | See pattern definition above. |
| 3-0 | 0 | See pattern definition above. |

VD1_IF0_CHROMA0_RPT_PAT – Picture 0 CHROMA repeat pattern 0x320D

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-0 | R/W | 0 | Chroma repeat/skip pattern for picture 0. See picture 0 luma pattern for description. This value is only used when the picture is not stored together. |

VD1_IF0_LUMA1_RPT_PAT – Picture 1 LUMA repeat pattern 0x320E

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-0 | R/W | 0 | Luma repeat/skip pattern for picture 1. See picture 0 luma pattern for description. |

VD1_IF0_CHROMA1_RPT_PAT – Picture 1 CHROMA repeat pattern 0x320F

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-0 | R/W | 0 | Chroma repeat/skip pattern for picture 1. See picture 0 luma pattern for description. This value is only used when the picture is not stored together. |

VD1_IF0_LUMA_PSEL – Picture 0 and 1's LUMA 0x3210

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-28 | R/W | 0 | unused |
| 27-26 | R/W | 0 | Luma_psel_mode: controls whether it's single-picture or two-picture mode. {00} Only picture 0 is used. Ignore settings defined in Luma_psel_last_line, Luma_psel_pattern and Luma_psel_loop. {01} Only picture 1 is used. Ignore settings defined in Luma_psel_last_line, Luma_psel_pattern and Luma_psel_loop. {1x} Two-picture mode. |
| 25-24 | R/W | 0 | Luma_psel_last_line: select which picture's last line to output, during repeat last line mode. Bit[0]=0, when picture 0 past the last line, use picture 0's last line during repeat last line mode; Bit[0]=1, when picture 0 past the last line, use picture 1's last line during repeat last line mode; Bit[1]=0, when picture 1 past the last line, use picture 0's last line during repeat last line mode; Bit[1]=1, when picture 1 past the last line, use picture 1's last line during repeat last line mode. |
| 23-8 | R/W | 0 | Luma_psel_pattern. If the value of the bit pointed by the loop pointer is 0, output picture 0's luma line, if the bit value is 1, output picture 1's luma line. |
| 7-4 | R/W | 0 | Luma_psel_loop start pointer. |
| 3-0 | R/W | 0 | Luma_psel_loop end pointer. |

VD1_IF0_CHROMA_PSEL – Picture 0 and 1's CHROMA 0x3211

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31-28 | R/W | 0 | unused |

| | | | |
|-------|-----|---|--|
| 27-26 | R/W | 0 | Chroma_psel_mode: see luma_psel_mode. This value is only used when the picture is not stored together. |
| 25-24 | R/W | 0 | Chroma_psel_last_line: See luma_psel_last_line. This value is only used when the picture is not stored together. |
| 23-8 | R/W | 0 | Chroma_psel_pattern. If the value of the bit pointed by the loop pointer is 0, output picture 0's chroma line, if the bit value is 1, output picture 1's chroma line. This value is only used when the picture is not stored together. |
| 7-4 | R/W | 0 | Chroma_psel_loop start pointer. This value is only used when the picture is not stored together. |
| 3-0 | R/W | 0 | Chroma_psel_loop end pointer. This value is only used when the picture is not stored together. |

VD1_IF0_DUMMY_PIXEL 0x3212

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------|
| 31-24 | R/W | 0x00 | Y or R dummy pixel value ,8bit |
| 23-16 | R/W | 0x80 | Cb or G dummy pixel value ,8bit |
| 15-8 | R/W | 0x80 | Cr or B dummy pixel value ,8bit |
| 7-0 | R/W | 0 | unused |

VD1_RANGE_MAP_Y 0x321A**VD1_RANGE_MAP_CB 0x321B****VD1_RANGE_MAP_CR 0x321C**

Output data range conversion function:

$$Y[n] = \text{clip}(\text{Round}((Y[n] + \text{DIN_OFFSET}) * \text{RANGE_MAP_COEF}) / (1 \ll \text{RANGE_MAP_SR})) + \text{DOUT_OFFSET};$$

To perform VC-1 range reduction, set the following:

$$\text{DIN_OFFSET} = 0x180 = -128;$$

$$\text{RANGE_MAP_COEF} = \text{RANGE_MAPY} + 9$$

$$\text{RANGE_MAP_SR} = 3$$

$$\text{DOUT_OFFSET} = 0x080 = 128$$

To get the equivalent function:

$$Y[n] = \text{clip}(((Y[n] - 128) * (\text{RANGE_MAPY} + 9) + 4) \gg 3) + 128);$$

VPP_GAINOFF_CTRL3 0x1d6d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 28:16 | R/W | 0 | pre_offset0 : //signed , default = 0, gainoff module pre_offset0 |
| 12:0 | R/W | 0 | pre_offset1 : //signed , default = 0, gainoff module pre_offset1 |

VPP_GAINOFF_CTRL4 0x1d6e

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 12:0 | R/W | 0 | pre_offset2 : //signed , default = 0, gainoff module pre_offset2 |

VPP_GAINOFF_GCLK_CTRL 0x1d6f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 1:0 | R/W | 0 | gainoff_gclk_ctrl : //unsigned , default = 0, gainoff_gclk_ctrl |

VPP_GCLK_CTRL0 0x1d72

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 5:4 | R/W | 0 | ofifo_clk1 : //unsigned , default = 0, gating clock of out linefifo in vpp |
| 3:2 | R/W | 0 | clk0 : //unsigned , default = 0, clk swtich of all vpp module |
| 1 | R/W | 0 | reg_gclk : //unsigned , default = 0, registers gate clk of vpp module |

VPP_GCLK_CTRL1 0x1d73

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 27:20 | R/W | 0 | gclk_ctrl_wm : //unsigned , default = 0, gating clock of water_mark |
| 18:15 | R/W | 0 | dolby3_gclk_ctrl : //unsigned , default = 0, gating clock of dolby3 |
| 3:0 | R/W | 0 | cm_gclk_ctrl : //unsigned , default = 0, gating clock of color manage |

VPP_MISC1 0x1d76

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 20:12 | R/W | 0 | vd1_prebld_alpha : //unsigned , default = 0, VD1 alpha for preblend |
| 8:0 | R/W | 0 | vd1_postbld_alpha : //unsigned , default = 0, VD1 alpha for postblend |

VPP_SRSCL_GCLK_CTRL 0x1d77

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 15:8 | R/W | 0 | gclk_ctrl_sr1 : //unsigned , default = 0 , gating clock of sr1 |
| 7:0 | R/W | 0 | gclk_ctrl_sr0 : //unsigned , default = 0 , gating clock of sr0 |

VPP_BLACKEXT_CTRL 0x1d80

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | R/W | 0 | blackext_start : //unsigned , default = 0 ,blackext_start |
| 23:16 | R/W | 0 | blackext_slope1 : //unsigned , default = 0 ,blackext_slope1 |
| 15:8 | R/W | 0 | blackext_midpt : //unsigned , default = 0 ,blackext_midpt |
| 7:0 | R/W | 0 | blackext_slope2 : //unsigned , default = 0 ,blackext_slope2 |

VPP_DNLP_CTRL_00 0x1d81

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | R/W | 0 | data0 : //unsigned , default = 0 ,bottom of region03 output value |
| 23:16 | R/W | 0 | data1 : //unsigned , default = 0 ,bottom of region02 output value |
| 15:8 | R/W | 0 | data2 : //unsigned , default = 0 ,bottom of region01 output value |
| 7:0 | R/W | 0 | data3 : //unsigned , default = 0 ,bottom of region00 output value |

VPP_DNLP_CTRL_01 0x1d82

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | R/W | 0 | data0 : //unsigned , default = 0 ,bottom of region07 output value |
| 23:16 | R/W | 0 | data1 : //unsigned , default = 0 ,bottom of region06 output value |
| 15:8 | R/W | 0 | data2 : //unsigned , default = 0 ,bottom of region05 output value |
| 7:0 | R/W | 0 | data3 : //unsigned , default = 0 ,bottom of region04 output value |

VPP_DNLP_CTRL_02 0x1d83

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | R/W | 0 | data0 : //unsigned , default = 0 ,bottom of region11 output value |
| 23:16 | R/W | 0 | data1 : //unsigned , default = 0 ,bottom of region10 output value |
| 15:8 | R/W | 0 | data2 : //unsigned , default = 0 ,bottom of region09 output value |
| 7:0 | R/W | 0 | data3 : //unsigned , default = 0 ,bottom of region08 output value |

VPP_DNLP_CTRL_03 0x1d84

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | R/W | 0 | data0 : //unsigned , default = 0 ,bottom of region15 output value |
| 23:16 | R/W | 0 | data1 : //unsigned , default = 0 ,bottom of region14 output value |
| 15:8 | R/W | 0 | data2 : //unsigned , default = 0 ,bottom of region13 output value |
| 7:0 | R/W | 0 | data3 : //unsigned , default = 0 ,bottom of region12 output value |

VPP_DNLP_CTRL_04 0x1d85

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | R/W | 0 | data0 : //unsigned , default = 0 ,bottom of region19 output value |
| 23:16 | R/W | 0 | data1 : //unsigned , default = 0 ,bottom of region18 output value |
| 15:8 | R/W | 0 | data2 : //unsigned , default = 0 ,bottom of region17 output value |
| 7:0 | R/W | 0 | data3 : //unsigned , default = 0 ,bottom of region16 output value |

VPP_DNLP_CTRL_05 0x1d86

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | R/W | 0 | data0 : //unsigned , default = 0 ,bottom of region23 output value |
| 23:16 | R/W | 0 | data1 : //unsigned , default = 0 ,bottom of region22 output value |
| 15:8 | R/W | 0 | data2 : //unsigned , default = 0 ,bottom of region21 output value |
| 7:0 | R/W | 0 | data3 : //unsigned , default = 0 ,bottom of region20 output value |

VPP_DNLP_CTRL_06 0x1d87

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | R/W | 0 | data0 : //unsigned , default = 0 ,bottom of region27 output value |
| 23:16 | R/W | 0 | data1 : //unsigned , default = 0 ,bottom of region26 output value |
| 15:8 | R/W | 0 | data2 : //unsigned , default = 0 ,bottom of region25 output value |
| 7:0 | R/W | 0 | data3 : //unsigned , default = 0 ,bottom of region24 output value |

VPP_DNLP_CTRL_07 0x1d88

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | R/W | 0 | data0 : //unsigned , default = 0 ,bottom of region31 output value |
| 23:16 | R/W | 0 | data1 : //unsigned , default = 0 ,bottom of region30 output value |
| 15:8 | R/W | 0 | data2 : //unsigned , default = 0 ,bottom of region29 output value |
| 7:0 | R/W | 0 | data3 : //unsigned , default = 0 ,bottom of region28 output value |

VPP_DNLP_CTRL_08 0x1d89

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | R/W | 0 | data0 : //unsigned , default = 0 ,bottom of region35 output value |
| 23:16 | R/W | 0 | data1 : //unsigned , default = 0 ,bottom of region34 output value |
| 15:8 | R/W | 0 | data2 : //unsigned , default = 0 ,bottom of region33 output value |

| | | | |
|-----|-----|---|---|
| 7:0 | R/W | 0 | data3 : //unsigned , default = 0 ,bottom of region32 output value |
|-----|-----|---|---|

VPP_DNLP_CTRL_09 0x1d8a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | R/W | 0 | data0 : //unsigned , default = 0 ,bottom of region39 output value |
| 23:16 | R/W | 0 | data1 : //unsigned , default = 0 ,bottom of region38 output value |
| 15:8 | R/W | 0 | data2 : //unsigned , default = 0 ,bottom of region37 output value |
| 7:0 | R/W | 0 | data3 : //unsigned , default = 0 ,bottom of region36 output value |

VPP_DNLP_CTRL_10 0x1d8b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | R/W | 0 | data0 : //unsigned , default = 0 ,bottom of region43 output value |
| 23:16 | R/W | 0 | data1 : //unsigned , default = 0 ,bottom of region42 output value |
| 15:8 | R/W | 0 | data2 : //unsigned , default = 0 ,bottom of region41 output value |
| 7:0 | R/W | 0 | data3 : //unsigned , default = 0 ,bottom of region40 output value |

VPP_DNLP_CTRL_11 0x1d8c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | R/W | 0 | data0 : //unsigned , default = 0 ,bottom of region47 output value |
| 23:16 | R/W | 0 | data1 : //unsigned , default = 0 ,bottom of region46 output value |
| 15:8 | R/W | 0 | data2 : //unsigned , default = 0 ,bottom of region45 output value |
| 7:0 | R/W | 0 | data3 : //unsigned , default = 0 ,bottom of region44 output value |

VPP_DNLP_CTRL_12 0x1d8d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | R/W | 0 | data0 : //unsigned , default = 0 ,bottom of region51 output value |
| 23:16 | R/W | 0 | data1 : //unsigned , default = 0 ,bottom of region50 output value |

| 0 | R/W | 0 | vpp_dpath_sel0 : //unsigned , default = 0 ,by_pass from preblend to blue_strech |

VPP_SYNC_SEL0 0x1d96

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | 0 | sync_sel_bits : //unsigned ,default = 0,sync_sel bits for VPP_DOLBY_CTRL |

VPP_CCORING_CTRL 0x1da0

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 27:16 | R/W | 0 | reg_bypass_ccoring_ythd : // unsigned , default = 0 , bypass_ccoring_ythd |
| 15:8 | R/W | 0 | ccoring_th : // unsigned , default = 0 , Chroma coring threshold |
| 3:0 | R/W | 0 | ccoring_slope : // unsigned , default = 0 , Chroma coring slope |

VPP_VE_ENABLE_CTRL 0x1da1

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 29:28 | R/W | 0 | dnlp_gclk_ctrl : // unsigned , default = 0 ,dnlp gclk ctrl |
| 27:26 | R/W | 0 | blackext_gclk_ctrl : // unsigned , default = 0 ,blackext gclk ctrl |
| 25:24 | R/W | 0 | ccoring_gclk_ctrl : // unsigned , default = 0 ,chroma coring gclk ctrl |
| 20 | R/W | 0 | demo_ccoring_enable : // unsigned , default = 0 ,demo chroma coring enable |
| 19 | R/W | 0 | demo_blackext_enable : // unsigned , default = 0 ,demo black extension enable |
| 18 | R/W | 0 | demo_dnlp_enable : // unsigned , default = 0 ,demo dynamic nonlinear luma processing enable |

| | | | |
|-------|-----|---|--|
| 15:14 | R/W | 0 | demo_disp_position : // unsigned , default = 0 ,2'b00: demo adjust on top, 2'b01: demo adjust on bottom, 2'b10: demo adjust on left, 2'b11: demo adjust on right |
| 4 | R/W | 0 | ccoring_en : // unsigned , default = 0 , chroma coring enable |
| 3 | R/W | 0 | blackext_en : // unsigned , default = 0 , black extension enable |
| 2 | R/W | 0 | dnlp_en : // unsigned , default = 0 , dynamic nonlinear luma processing enable |

VPP_VE_DEMO_LEFT_TOP_SCREEN_WIDTH 0x1da2

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 12:0 | R/W | 0 | ve_demo_left_top_screen_width : // unsigned , default = 0 demo left or top screen width |

VPP_VE_DEMO_CENTER_BAR 0x1da3

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | ve_demo_center_bar : // unsigned , default = 0 center bar enable |
| 27:24 | R/W | 0 | ve_demo_center_bar : // unsigned , default = 0 center bar width (*2) |
| 23:16 | R/W | 0 | ve_demo_center_bar : // unsigned , default = 0 center bar Cr (*4) |
| 15:8 | R/W | 0 | ve_demo_center_bar : // unsigned , default = 0 center bar Cb (*4) |
| 7:0 | R/W | 0 | ve_demo_center_bar : // unsigned , default = 0 center bar y (*4) |

VPP_VE_H_V_SIZE 0x1da4

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 28:16 | R/W | 780 | ve_line_length : // unsigned , default = 780 ve_line_length |
| 12:0 | R/W | 438 | ve_pic_height : // unsigned , default = 438 ve_pic_height |

VPP_OUT_H_V_SIZE 0x1da5

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 28:16 | R/W | 780 | vppout_line_length : // unsigned , default = 780 vd1_scale_out hsize |
| 12:0 | R/W | 438 | vppout_pic_height : // unsigned , default = 438 vd1_scale_out vsize |

VPP_VDO_MEAS_CTRL 0x1da8

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 10:0 | R/W | 0 | vdo_meas_ctrl : // unsigned , default = 0 vdo_meas_ctrl |

VPP_VDO_MEAS_VS_COUNT_HI 0x1da9

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 19:16 | RO | 0 | ro_ind_meas_count_n // unsigned , default = 0 ind_meas_count_n, every number of sync_span vsyncs, this counter add 1 |
| 15:0 | RO | 0 | ro_counter_h // unsigned , default = 0 high bit portion of counter |

VPP_VDO_MEAS_VS_COUNT_LO 0x1daa

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | RO | 0 | ro_counter_l // unsigned , default = 0, low bit portion of counter |

VPP_INPUT_CTRL 0x1dab

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 11:9 | R/W | 0 | vd2_sel : // unsigned , default = 0, 001: select vd1_din, 010: select vd2_din, 011: select d2d3_l_din, 100: d2d3_r_din, otherwise no selection |
| 8:6 | R/W | 0 | vd1_l_sel : // unsigned , default = 0, 001: select vd1_din, 010: select vd2_din, 011: select d2d3_l_din, 100: d2d3_r_din, otherwise no selection, vd1_l_sel selected cannot be used as the source of vd1_r_sel or vd2_sel |
| 5:3 | R/W | 0 | vd1_r_sel : // unsigned , default = 0, 001: select vd1_din, 010: select vd2_din, 011: select d2d3_l_din, 100: d2d3_r_din, otherwise no selection, useful only vd1_interleave_mode is not 00. And the source vd1_r_sel used can not used for the vd2_sel any more bit 2:0 vd1_interleave_mode // unsigned , default = 0, 000: no interleave, 001: pixel interleaving, 010: line interleaving, 011: 2 pixel interleaving, 100: 2 line interleaving |

VPP_CTI_CTRL2 0x1dac

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 25:24 | R/W | 0 | cti_bpf_sel : // unsigned , default = 0 |
| 20:16 | R/W | 0 | cti_blend_factor_gamma : // unsigned , default = 0 |
| 12:8 | R/W | 0 | cti_blend_factor_beta : // unsigned , default = 0 |
| 4:0 | R/W | 0 | cti_blend_factor_alpha : // unsigned , default = 0 |

VPP_WRBAK_CTRL_SEC 0x1dad

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| bit 31 | R/W | 0 | vpp_wrbak_sel // unsigned , default = 0, 1: VPP_WRBAK_CTRL regs set to vpp_wrbak_data_ini, Cbus can't access 0: VPP_WRBAK_CTRL reg can be written bit |
| 30:0 | R/W | 0 | vpp_wrbak_data_ini // unsigned , default = 0, |

VD1_BLEND_SRC_CTRL_SEC 0x1dae

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R/W | 0 | vd1_blend_src_sel : // unsigned , default = 0, 1: VD1_BLEND_SRC_CTRL regs set to vd1_blend_src_data_ini, Cbus can't access 0: VD1_BLEND_SRC_CTRL reg can be written |
| 30:0 | R/W | 0 | vd1_blend_src_data_ini : // unsigned , default = 0, |

VD2_BLEND_SRC_CTRL_SEC 0x1daf

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
|--------|-----|---------|-------------|

| | | | |
|------|-----|---|---|
| 31 | R/W | 0 | vd2_blend_src_sel : // unsigned , default = 0, 1: VD2_BLEND_SRC_CTRL regs set to vd1_blend_src_data_ini,Cbus can't access 0: VD2_BLEND_SRC_CTRL reg can be writen |
| 30:0 | R/W | 0 | vd2_blend_src_data_ini : // unsigned , default = 0, |

OSD1_BLEND_SRC_CTRL_SEC 0x1db0

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R/W | 0 | osd1_blend_src_sel : // unsigned , default = 0, 1: OSD1_BLEND_SRC_CTRL regs set to osd1_blend_src_data_ini,Cbus can't access 0: OSD1_BLEND_SRC_CTRL reg can be writen |

VPP_SLEEP_CTRL 0x1dfa

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 1 | sleep_always_en : //unsigned, default = 1 |
| 30 | R/W | 0 | sleep_always_dis : //unsigned, default = 0 |
| 29:16 | R/W | 0 | sleep_line_len : //unsigned, default = 0 |
| 15:14 | R/W | 0 | sleep_mode : //unsigned, default = 0 |
| 13:0 | R/W | 0 | sleep_beg_line : //unsigned, default = 0 |

VD1_BLEND_SRC_CTRL 0x1dfb

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 16 | R/W | 0 | vd1_postbld_premult : //unsigned, default = 0 |
| 11:8 | R/W | 1 | vd1_postbld_src : //unsigned, default = 1 , 0:close 1:vd1 2:vd2 3:osd1 4:osd2 |
| 4 | R/W | 0 | vd1_prebld_premult : //unsigned, default = 0 |
| 3:0 | R/W | 1 | vd1_prebld_src : //unsigned, default = 1 , 0:close 1:vd1 2:vd2 3:osd1 4:osd2 |

VD2_BLEND_SRC_CTRL 0x1dfc

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 20 | R/W | 0 | vd2_blend_path_sel : //unsigned, default = 0 |
| 16 | R/W | 0 | vd2_postbld_premult : //unsigned, default = 0 |
| 11:8 | R/W | 2 | vd2_postbld_src : //unsigned, default = 2 , 0:close 1:vd1 2:vd2 3:osd1 4:osd2 |
| 4 | R/W | 0 | vd2_prebld_premult : //unsigned, default = 0 |
| 3:0 | R/W | 0 | vd2_prebld_src : //unsigned, default = 0 ,0:close 1:vd1 2:vd2 3:osd1 4:osd2 |

OSD1_BLEND_SRC_CTRL 0x1dfd

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 20 | R/W | 0 | osd1_blend_path_sel : //unsigned, default = 0 |
| 16 | R/W | 0 | osd1_postbld_premult : //unsigned, default = 0 |
| 11:8 | R/W | 3 | osd1_postbld_src : //unsigned, default = 3 , 0:close 1:vd1 2:vd2 3:osd1 4:osd2 |
| 4 | R/W | 0 | osd1_prebld_premult : //unsigned, default = 0 |
| 3:0 | R/W | 0 | osd1_prebld_src : //unsigned, default = 0 ,0:close 1:vd1 2:vd2 3:osd1 4:osd2 |

OSD2_BLEND_SRC_CTRL 0x1dfe

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 20 | R/W | 0 | osd2_blend_path_sel : //unsigned, default = 0 |
| 16 | R/W | 0 | osd2_postbld_premult : //unsigned, default = 0 |
| 11:8 | R/W | 4 | osd2_postbld_src : //unsigned, default = 4 , 0:close 1:vd1 2:vd2 3:osd1 4:osd2 |
| 4 | R/W | 0 | osd2_prebld_premult : //unsigned, default = 0 |
| 3:0 | R/W | 0 | osd2_prebld_src : //unsigned, default = 0 , 0:close 1:vd1 2:vd2 3:osd1 4:osd2 |

10.2.3.23 CM registers**VPP_CHROMA_ADDR_PORT 0x1d70**

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------------|
| 31-0 | R/W | 0 | Color management address port |

VPP_CHROMA_DATA_PORT 0x1d71

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|----------------------------|
| 31-0 | R/W | 0 | Color management data port |

Color management internal registers is indirectly accessed by the registers VPP_CHROMA_ADDR_PORT and VPP_CHROMA_DATA_PORT.

Color management registers

The example to access the Color management registers is like this:

Wr(VPP_CHROMA_ADDR_PORT);

Wr(VPP_CHROMA_DATA_PORT);

REG_CHROMA_CONTROL 0x30

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | reg_chroma_en. enable color manage function 1'b1: enable 1'b0: bypass |

| | | | |
|-----|-----|---|---|
| 6 | R/W | 0 | sat_sel. uv_max or u ² +v ² selected as sat for reference 1'b1: uv_max(default) 1'b0: u ² +v ² |
| 5 | R/W | 0 | uv_adj_en. final uv_adjust enable 1'b1: enable 1'b0: bypass |
| 2 | R/W | 0 | hue_en. rgb to hue enable 1'b1: enable(default) 1'b0: bypass |
| 1-0 | R/W | 0 | csc_sel. define input YUV with different color type 2'b00: 601(16-235) 2'b01: 709(16-235) 2'b10: 601(0-255) 2'b11: 709(0-255) |

SAT_BYYB_NODE0 0x200

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-24 | R/W | 0 | The 4th node, the same as below |
| 23-16 | R/W | 0 | The 3th node, the same as below |
| 15-8 | R/W | 0 | The 2th node, the same as below |
| 7-0 | R/W | 0 | Signed, The 1th node about saturation gain offset along Y coordinate, the gain normalized to 128 as "1". |

SAT_BYYB_NODE1 0x201

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-24 | R/W | 0 | The 8th node, the same as below |
| 23-16 | R/W | 0 | The 7th node, the same as below |
| 15-8 | R/W | 0 | The 6th node, the same as below |
| 7-0 | R/W | 0 | Signed, The 5th node about saturation gain offset along Y coordinate, the gain normalized to 128 as "1". |

SAT_BYYB_NODE2 0x202

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-8 | R/W | 0 | reserved |
| 7-0 | R/W | 0 | Signed, The 9th node about saturation gain offset along Y coordinate, the gain normalized to 128 as "1". |

SAT_SRC_NODE 0x203

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-28 | R/W | 0 | reserved |
| 27-16 | R/W | 0x800 | unsign, Threshold of input saturation for second & third piece. i.e. it is boundary for reg_CM2_Adj_Sat_via_HS[1][:]and reg_CM2_Adj_Sat_via_HS[2][:] |

| | | | |
|-------|-----|-------|--|
| 15-12 | R/W | 0 | reserved |
| 11-0 | R/W | 0x400 | unsign, Threshold of input saturation for first and second piece.i.e. it is boundary for reg_CM2_Adj_Sat_via_HS[0][:] and reg_CM2_Adj_Sat_via_HS[1][:] |

CM_ENH_SFT_MODE 0x204

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-9 | R/W | 0 | reserved |
| 8-6 | R/W | 0 | Hue offset adjustments scale for Reg_CM2_Adj_Hue_via_H[:]& Reg_CM2_Adj_Hue_via_S[:]& Reg_CM2_Adj_Hue_via_Y[:]: 0: no scale up; 1: upscale by 2 - (-128,127)x2; 2: upscale by 4 - (-128,127)x4; 3: upscale by 8 - (-128,127)x8; |

| 3 | R/W | 0 | reserved |
| 2 | R/W | 0 | cm2_filt_en :apply cm on lp portion enable |
| 1 | R/W | 0 | CM2 enable signal |
| 0 | R/W | 0 | CM1 enable signal |

ROI_X_SCOPE 0x209

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-28 | R/W | 0 | reserved |
| 27-16 | R/W | 0 | Ending col index of the Region of Interest (ROI) |
| 15-12 | R/W | 0 | reserved |
| 11-0 | R/W | 0 | Start col index of the Region of Interest (ROI) |

ROI_Y_SCOPE 0x20a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-28 | R/W | 0 | reserved |
| 27-16 | R/W | 0 | Ending col index of the Region of Interest (ROI) |
| 15-12 | R/W | 0 | reserved |
| 11-0 | R/W | 0 | Start col index of the Region of Interest (ROI) |

POI_XY_DIR 0x20b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-28 | R/W | 0 | reserved |
| 27-16 | R/W | 0 | Row index of the pixel(position) of Interest (POI) |
| 15-12 | R/W | 0 | reserved |
| 11-0 | R/W | 0 | Col index of the pixel(position) of Interest (POI) |

COI_Y_SCOPE 0x20c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-28 | R/W | 0 | reserved |
| 27-16 | R/W | 0 | Higher bound of luma value for color of interest (COI), 8bits precision |
| 15-12 | R/W | 0 | reserved |
| 11-0 | R/W | 0 | Lower bound of luma value for color of interest (COI), 8bits precision |

COI_H_SCOPE 0x20d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-28 | R/W | 0 | reserved |
| 27-16 | R/W | 0 | Higher bound of Hue value for color of interest (COI), 12 8bits precision |
| 15-12 | R/W | 0 | reserved |
| 11-0 | R/W | 0 | Lower bound of Hue value for color of interest (COI), 12 bits precision |

COI_S_SCOPE 0x20e

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-28 | R/W | 0 | reserved |
| 27-16 | R/W | 0 | Higher bound of Sat value for color of interest (COI), 12 8bits precision |
| 15-12 | R/W | 0 | reserved |
| 11-0 | R/W | 0 | Lower bound of Sat value for color of interest (COI), 12 bits precision |

IFO_MODE 0x20f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-8 | R/W | 0 | reserved |
| 7-4 | R/W | 0 | Mode control for COI replacement, bit[3:2] control COI pixels: 0: no replacement for COI pixels 1: disable CM2 enhance for COI pixels; 2: keep COI pixels Y but replace HS by [*HS]; 3: replace COI pixels to [*YHS] bit[1:0] controls non-COI pixels: 0: no replacement for non-COI pixels 1: disable CM2 enhance for non-COI pixels; 2: keep COI pixels Y but replace HS by [*HS]; 3: replace non- COI pixels to [*YHS] |
| 3-0 | R/W | 0 | Enhance mode control of pixels inside and outside Region of Interest (ROI) , bit [3:2] control ROI: 0: enable CM2 processing in ROI; 1: disable CM2 processing in ROI; 2: keep ROI pixels Y but replace HS by [*HS]; 3: ow ROI pixels to [*YHS] bit [1:0] control pixels other than ROI similarly. 0: enable CM2 processing in non-ROI; 1: disable CM2 processing in non-ROI; 2: keep ROI pixels Y but replace HS by [*HS]; 3: ow non-ROI pixels to [*YHS] |

POI_RPL_MODE0x210

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31-4 | R/W | 0 | reserved |

| | | | |
|-----|-----|---|--|
| 3-0 | R/W | 0 | Pixel of interest (POI) replacement mode: 0: no replacements; 1: one pixel of POI position replaced to [*YHS] 2: 3X3 pixels centering POI position replaced to [*YHS] 3: 5X5 pixels centering POI position replaced to [*YHS] ... 15: 29X29 pixels centering POI position replaced to [*YHS] |
|-----|-----|---|--|

DEMO_OWR_YHS 0x211

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-24 | R/W | 0 | Saturation value overwriting to ROI/POI/COI; 12bits precision, equal to saturation precision. |
| 23-12 | R/W | 0 | Hue value overwriting to ROI/POI/COI; 12 bits precision, equal to 1/4 hue precision. E.g. { Reg_CM2Demo_OWR_H, 2'h0} |
| 11-0 | R/W | 0 | Luma value overwriting to ROI/POI/COI; 8bits precision, equal to 1/4 luma precision, e.g. { Reg_CM2Demo_OWR_Y, 2'h0} |

DEMO_POI_Y 0x212

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-8 | RO | 0 | Reserved |
| 7-0 | RO | 0 | Luma value for pixel of interest (POI), only get locked higher 8bits |

DEMO_POI_H 0x213

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-12 | RO | 0 | Reserved |
| 11-0 | RO | 0 | Hue value for pixel of interest (POI), only get locked higher 12bits |

DEMO_POI_S 0x214

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-12 | RO | 0 | Reserved |
| 11-0 | RO | 0 | Saturation value for pixel of interest (POI), only get locked higher 12bits |

LUMA_ADJ_LIMT 0x215

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-28 | R/W | 0 | reserved |
| 27-16 | R/W | 0 | Slope to do the Luma adjust degrade speed based on Saturation. It was normalized to 16 as '1'. |

| | | | |
|-------|-----|---|--|
| 15-12 | R/W | 0 | reserved |
| 11-0 | R/W | 0 | Threshold to saturation to do Luma adjustment degrade. Only pixels' saturation lower than this threshold will degrade the Luma adjustment. |

SAT_ADJ_LIMT 0x216

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-28 | R/W | 0 | reserved |
| 27-16 | R/W | 0 | Slope to do the Sat adjust degrade speed based on Saturation. It was normalized to 16 as '1'. |
| 15-12 | R/W | 0 | reserved |
| 11-0 | R/W | 0 | Threshold to saturation to do Sat adjustment degrade. Only pixels' saturation lower than this threshold will degrade the Luma adjustment. |

HUE_ADJ_LIMT 0x217

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-28 | R/W | 0 | reserved |
| 27-16 | R/W | 0 | Slope to do the Hue adjust degrade speed based on Saturation. It was normalized to 16 as '1'. |
| 15-12 | R/W | 0 | reserved |
| 11-0 | R/W | 0 | Threshold to saturation to do Hue adjustment degrade. Only pixels' saturation lower than this threshold will degrade the Luma adjustment. |

UVHS_OFST 0x218

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------------|
| 31-24 | R/W | 0 | V offset after CM2, under s10 scale |
| 23-16 | R/W | 0 | U offset after CM2, under s10 scale |
| 15-8 | R/W | 0 | V offset before CM2, under s10 scale |
| 7-0 | R/W | 0 | U offset before CM2, under s10 scale. |

HUE_CFG_PARA 0x219

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-17 | R/W | 0 | reserved |
| 16 | R/W | 0 | Options to protect HUE after CM2 adjustments. This will be added to avoid HUE distortion if Saturation is enhanced too much. |
| 15-13 | R/W | 0 | Hue adjustment via HS the Saturation division mode: 0: 1024/2048/3072, 4095; 1: 512, 1024, 1536, 2048; 2: 256, 512, 768, 1024; |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| | | | 3: 128, 256, 384, 512; 4: 512/1024/2048/4096; 5: 256/512/1024/2048; 6: 128/256/512/1024; 7: 64,128,256,512 |
| 12 | R/W | 0 | Hue slice division mode: 0: 32 pieces, 360/32 degrees each slice; 1/up: first 20 slices with 360/64 degrees each slice, others 360/16 degrees each slices. Notes, this option provide options to get more precise Hue adjustments for FTC/Red and so on |
| 11-0 | R/W | 0 | Hue offset before CM2 adjustment, this will provide options to divide the Hue slices with a precise offset. But need to compensate back with the global Hue after CM2 adjustments |

DEMO_SPLT_CFG 0x21a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------|
| 31-22 | R/W | 0 | reserved |
| 21-20 | R/W | 0 | Demo split post |
| 19-16 | R/W | 0 | Demo split width |
| 12-0 | R/W | 0 | Demo split mode |

DEMO_SPLT_YHS 0x21b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31-24 | R/W | 0 | Luma value |
| 23-12 | R/W | 0 | Hue value |
| 11-0 | R/W | 0 | Sat value |

XVYCC_YSCP_REG 0x21c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 27:16 | R/W | 0x3ff | xvycc_y_max |
| 11:0 | R/W | 0x0 | xvycc_y_min |

XVYCC_USCP_REG 0x21d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 27:16 | R/W | 0x3ff | xvycc_u_max |
| 11:0 | R/W | 0x0 | xvycc_u_min |

XVYCC_VSCP_REG 0x21e

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 27:16 | R/W | 0x3ff | xvycc_v_max |
| 11:0 | R/W | 0x0 | xvycc_v_min |

the main adjust parameter is saved according to 32 hue node order, one by one. The parameter of each hue node is same. All the parameter for each hue occupy 5 register-addr-space. For the addr-offset aligned, we allocate 8 addr-space to each node parameter, for example,

the parameter of 1th node uses the address space : 0x100, 0x101, 0x102, 0x103, 0x104,

and 2th node uses the address space : 0x108, 0x109, 0x10a, 0x10b, 0x10c,

and 2th node uses the address space : 0x110, 0x111, 0x112, 0x113, 0x114,

.....

CM2_ENH_COEF0_H00 0x100

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-24 | R/W | 0 | Same as last |
| 23-16 | R/W | 0 | Same as last |
| 15-8 | R/W | 0 | Signed, Saturation gain offset for three pieces saturation on Hue section (totally 32 sections) node 0; the gain normalized to 128 as "1". |
| 7-0 | R/W | 0 | Signed, Luma offsets for Hue section (totally 32 sections) nodes 0 , range (-128,127) |

CM2_ENH_COEF1_H00 0x101

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-24 | R/W | 0 | Signed, Hue offset for each four pieces Luma region on each Hue section (totally 32 sections) nodes, this is for $y=2/4$, hue node 0 |
| 23-16 | R/W | 0 | Signed, Hue offset for each four pieces Luma region on each Hue section (totally 32 sections) nodes, this is for $y=1/4$, hue node 0 |

VKS_LBUF_SIZE 0x310b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 11: 0 | R/W | 1024 | reg_lbuf_depth : // unsigned , default = 1024 |

VKS_PARA_ADDR_PORT 0x310e

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31: 0 | R/W | 3ff | Access address for vkstone para_lut,start address must be 0x09 |

VKS_PARA_DATA_PORT 0x310f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|----------------------------------|
| 31: 0 | R/W | / | Data access for vkstone para lut |

Below are the detail registers of VKS_PARA_DATA_PORT and VKS_PARA_ADDR_PORT control:

VKS_SCL_OFFSET00 ~ VKS_SCL_OFFSET16 0X09~0X19

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:20 | | | reserved |
| 19: 0 | R/W | / | Left offset of the input pixel offset from the left 12bits pixel and 8 bits float phase |

VKS_SCL_STEP00 ~ VKS_SCL_STEP16 0X1A~0X2A

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 24:20 | | | reserved |
| 23: 0 | R/W | / | Unsigned reg_scl_stepx for ratio of each line(defined piece),step:4.20 opxium = (ipxium << 20)/step scale:4.2 = 1/step |

VKS_PPS_YCOEF00 ~ VKS_PPS_YCOEF32 0X2B~0X4B

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:24 | R/W | / | Signed reg_vks_ycoef0 Poly_phase scalar coef |
| 23:16 | R/W | / | Signed reg_vks_ycoef1 Poly_phase scalar coef |
| 15:8 | R/W | / | Signed reg_vks_ycoef2 Poly_phase scalar coef |
| 7: 0 | R/W | / | Signed reg_vks_ycoef3 Poly_phase scalar coef |

VKS_PPS_CCOEF00 ~ VKS_PPS_CCOEF32 0X4C~0X6C

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:24 | R/W | / | Signed reg_vks_ccoef0 Poly_phase scalar coef |

| | | | |
|-------|-----|---|--|
| 23:16 | R/W | / | Signed reg_vks_ccoef1 Poly_phase scalar coef |
| 15:8 | R/W | / | Signed reg_vks_ccoef2 Poly_phase scalar coef |
| 7: 0 | R/W | / | Signed reg_vks_ccoef3 Poly_phase scalar coef |

10.2.3.31 OSD1 registers

VIU_OSD1_CTRL_STAT 0x1A10

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R/W | 0 | osd_cfg_syn_en : // unsigned , default =0 1: module enable sync by go_field 0: normal |
| 30 | R/W | 0 | ENABLE_FREE_CLK. 1 = Use free-running clock; 0 = Use gated clock to save power. |
| 29 | R | 0 | TEST_RD_DSR: Applicable only when OSD debug mode is enabled. 1 = A new pixel is ready at register VIU_OSD1_TEST_RDDATA; 0 = No data ready. |
| / | / | / | / |
| 27-24 | R | 0 | OSD_BLK_MODE: the input pixel format of which the current OSD block is being processed. Dvalin src & normal src have different pixel format value for same format |
| 23-22 | R | 0 | OSD_BLK_PTR: The number of the current OSD block that is being processed. |
| 21 | R | 0 | OSD_ENABLE. 1 = OSD display is enabled; 0 = disabled. |
| 20-12 | R/W | 0 | GLOBAL_ALPHA: legal range 0 – 256. It is a 9-bit value that is multiplied to all output pixel's Alpha value, and then normalized, i.e.: $Alpha_tmp = Alpha_internal + (Alpha_internal == 0 ? 0 : 1);$ $Alpha_out = (Alpha_tmp * GLOBAL_ALPHA) / 256;$ |
| 11 | R/W | 0 | TEST_RD_EN: OSD debug mode enable. 1 = Output pixels are not routed to VPP, instead they are presented on registers VIU_OSD1_TEST_RDDATA, for CPU to read. 0 = Normal mode, pixels are output to VPP. |
| 10-9 | R/W | 0 | unused |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 8-5 | R/W | 0 | <p>CTRL_MTCH_Y: For OSD 444, 422 or 16-bit (COLOR_MATRIX = 0 or 1) mode, the input pixels contain no Alpha information, in order to associated the output pixel with an Alpha value, the following steps are taken:</p> <p>If TC_ALPHA_EN = 0, then all output pixels use a default Alpha value 0xFF;</p> <p>If TC_ALPHA_EN = 1, then the Alpha value is looked up by matching the pixel's Y/Cb/Cr against four Alpha registers' Y/Cb/Cr. If the pixel matches any one of the Alpha registers, then this register's Alpha value is used; If the pixel matches with more than one of the Alpha registers, then the lower Alpha register takes priority, e.g. use Alpha Reg0's value if the pixel match both Alpha Reg0 and Reg1; If no match, then use default Alpha value 0xFF.</p> <p>There are two ways of matching: one way is that the pixel has to compare all Y, Cb and Cr value with the Alpha registers; the other way is that the pixel only has to compare Y value with the Alpha registers. CTRL_MTCH_Y defines which way is used to determine a match.</p> <p>Bit[0] is for matching Alpha register 0: 1 = only need to compare Y; 0 = compare all Y, Cb and Cr.</p> <p>Bit[1] is for matching Alpha register 1: 1 = only need to compare Y; 0 = compare all Y, Cb and Cr.</p> <p>Bit[2] is for matching Alpha register 2: 1 = only need to compare Y; 0 = compare all Y, Cb and Cr.</p> <p>Bit[3] is for matching Alpha register 3: 1 = only need to compare Y; 0 = compare all Y, Cb and Cr.</p> |
| 4 | R/W | 0 | <p>CTRL_422TO444.</p> <p>1 = Enable conversion of 422 format input to 444 format output;</p> <p>0 = Disable 422 to 444 conversion.</p> |
| / | / | / | / |
| 2 | R/W | 0 | <p>osd_mem_mode : // unsigned , default =0</p> <p>0:canvas_araddr</p> <p>1: linear_araddr (Dvalin src must use this mode)</p> |
| 1 | R/W | 0 | premult_en : // unsigned , default =0 |
| 0 | R/W | 0 | OSD_BLK_ENABLE: Each bit to enable display an OSD block |

VIU_OSD1_CTRL_STAT2 0x1A2d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-16 | R | 0 | unused |
| 15 | R/W | 0 | unused |
| 14 | R/W | 0 | Replaced_alpha_en |
| 13-6 | R/W | 0 | Replaced_alpha |
| 5-4 | R/W | 0 | Hold_fifo_lines[6:5] |
| 3 | R/W | 0 | <p>RGBYUV_FULL_RANGE: Select coefficients for applicable output range.</p> <p>1 = output full range 0-255;</p> <p>0 = output range 16-235.</p> |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 2 | R/W | 0 | ALPHA_9B_MODE: Define how to expand 8-bit alpha value to 9-bit. 1 = The formula is (Alpha < 128) ? Alpha : Alpha + 1; 0 = The formula is (Alpha == 0) ? Alpha : Alpha + 1. |
| 1 | R/W | 0 | Padding status cleanup |
| 0 | R/W | 0 | COLOR_EXPAND_MODE. 1 = Expand the color components to 8-bit by padding LSBs with MSBs. E.g. If the input is 5'b11000, the output is expanded to 8'b11000110; 0 = Expand the color components to 8-bit by padding LSBs with 0. |

VIU_OSD1_TCOLOR_AG0 0x1A17

VIU_OSD1_TCOLOR_AG1 0x1A18

VIU_OSD1_TCOLOR_AG2 0x1A19

VIU_OSD1_TCOLOR_AG3 0x1A1a

Define Alpha register 0/1/2/3 values.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31-24 | R/W | 0xFF | Y or R. |
| 23-16 | R/W | 0xFF | CB or G. |
| 15-8 | R/W | 0xFF | CR or B. |
| 7-0 | R/W | 0xFF | ALPHA. |

VIU_OSD1_BLK0_CFG_W0 0x1A1b

Defines display block 0/1/2/3's property, word 0.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R/W | 0 | Reserved |
| 30 | R/W | 0 | mali_src_en 1: read data from Dvalin afbcd decoder 0: read data from DDR directly |
| 29 | R/W | 0 | y_rev: 0=normal read, 1=reverse read in Y direction |
| 28 | R/W | 0 | x_rev: 0=normal read, 1=reverse read in X direction |
| 27-24 | R/W | 0 | Reserved |
| 23-16 | R/W | 0 | TBL_ADDR. Virtual canvas LUT entry. |
| 15 | R/W | 0 | LITTLE_ENDIAN: define the of data stored in DDR. 1 = Data stored in DDR memory are of little endian; 0 = Data stored in DDR memory are of big endian. |
| 14 | R/W | 0 | RPT_Y: For reducing data size stored in DDR. |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| | | | 1 = For each line, OSD will display twice; 0 = No repeat, OSD display once per line. |
| 13-12 | R/W | 0 | INTERP_CTRL: If enabled, interpolate a data after each incoming pixels, in order to save DDR bandwidth. 0 = No interpolation; 1 = unused, no interpolation; 2 = Interpolate with preceding pixel value; 3 = Interpolate with the averaged value between the preceding pixel and the next pixel. |
| 11-8 | R/W | 0 | OSD_BLK_MODE: Define the OSD block's input pixel format. 0-2 = unused; 3 = 4:2:2 mode. Input 32-bit data for 2 pixels. Bit[31:24] is Y0, bit [23:16] is Cb0, bit[15:8] is Y1, bit [7:0] is Cr0, for Alpha value refer to reg VIU_OSD1_CTRL_STAT.CTRL_MTCH_Y; 4 = 16-bit mode. Refer to COLOR_MATRIX; 5 = 32-bit mode. Refer to COLOR_MATRIX; 6 = unused; 7 = 24-bit mode. Refer to COLOR_MATRIX; 8-15 = unused; |
| 6 | R/W | 0 | TC_ALPHA_EN: refer to reg VIU_OSD1_CTRL_STAT.CTRL_MTCH_Y. 1 = Enable alpha register matching. 0 = Disable. |
| 5-2 | R/W | 0 | COLOR_MATRIX: Applicable only to 16-bit color mode (OSD_BLK_MODE=4), 32-bit mode (OSD_BLK_MODE=5) and 24-bit mode (OSD_BLK_MODE=7), defines the bit-field allocation of the pixel data. For expanding the bit-fields to full 8-bit, refer to VIU_OSD1_CTRL_STAT2.color_expand_mode For 16-bit mode (OSD_BLK_MODE=4): 0 = 6:5:5 format. Bit[15:10] is Y[7:2] or R[7:2], bit[9:5] is Cb[7:3] or G[7:3], bit[4:0] is Cr[7:3] or B[7:3], for Alpha value refer to reg VIU_OSD1_CTRL_STAT.CTRL_MTCH_Y; 1 = 8:4:4 format. Bit[15:8] is Y or R, bit[7:4] is Cb[7:4] or G[7:4], bit[3:0] is Cr[7:4] or B[7:4], for Alpha value refer to reg VIU_OSD1_CTRL_STAT.CTRL_MTCH_Y; 4 = 5:6:5 format. Bit[15:11] is Y[7:3] or R[7:3], bit[10:5] is Cb[7:2] or G[7:2], bit[4:0] is Cr[7:3] or B[7:3], for Alpha value refer to reg VIU_OSD1_CTRL_STAT.CTRL_MTCH_Y; For 32-bit mode (OSD_BLK_MODE=5): 0 = RGBA 8:8:8:8 format. Bit[31:24] is Y or R, bit[23:16] is Cb or G; bit[15:8] is Cr or B; bit[7:0] is Alpha; 1 = ARGB 8:8:8:8 format. Bit[31:24] is Alpha, bit[23:16] is Y or R; bit[15:8] is Cb or G; bit[7:0] is Cr or B; 2 = ABGR 8:8:8:8 format. Bit[31:24] is Alpha, bit[23:16] is Cr or B; bit[15:8] is Cb or G; bit[7:0] is Y or R; 3 = BGRA 8:8:8:8 format. Bit[31:24] is Cr or B, bit[23:16] is Cb or G; bit[15:8] is Y or R; bit[7:0] is Alpha. For 24-bit mode (OSD_BLK_MODE=7): 0 = RGB 8:8:8 mode. Bit[23:16] is Y or R, bit[15:8] is Cb or G, bit[7:0] is Cr or B, for Alpha value refer to reg VIU_OSD1_CTRL_STAT.CTRL_MTCH_Y; |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| | | | 5 = BGR 8:8:8 mode. Bit[23:16] is Cr or B, bit[15:8] is Cb or G, bit[7:0] is Y or R, for Alpha value refer to reg VIU_OSD1_CTRL_STAT.CTRL_MTCH_Y. |
| 1 | R/W | 0 | INTERLACE_EN. 1 = Enable interlace mode. 0 = Disable. |
| 0 | R/W | 0 | INTERLACE_SEL_ODD: Applicable only if INTERLACE_EN = 1. 1 = Only output odd lines; 0 = Only output even lines. |

VIU_OSD1_BLK0_CFG_W1 0x1A1c

Defines display block 0/1/2/3's property, word 1.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------------------|
| 31-29 | R/W | 0 | Unused. |
| 28-16 | R/W | 0 | X_END. Virtual canvas co-ordinate. |
| 15-13 | R/W | 0 | Unused. |
| 12-0 | R/W | 0 | X_START. Virtual canvas co-ordinate. |

VIU_OSD1_BLK0_CFG_W2 0x1A1d

Defines display block 0/1/2/3's property, word 2.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------------------|
| 31-29 | R/W | 0 | Unused. |
| 28-16 | R/W | 0 | Y_END. Virtual canvas co-ordinate. |
| 15-13 | R/W | 0 | Unused. |
| 12-0 | R/W | 0 | Y_START. Virtual canvas co-ordinate. |

VIU_OSD1_BLK0_CFG_W3 0x1A1e

Defines display block 0/1/2/3's property, word 3.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-28 | R/W | 0 | Unused. |
| 27-16 | R/W | 0 | H_END. Display horizontal co-ordinate. |
| 15-12 | R/W | 0 | Unused. |
| 11-0 | R/W | 0 | H_START. Display horizontal co-ordinate. |

VIU_OSD1_BLK0_CFG_W4 0x1A13

Defines display block 0/1/2/3's property, word 4.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-28 | R/W | 0 | Unused. |
| 27-16 | R/W | 0 | V_END. Display vertical co-ordinate. |
| 15-12 | R/W | 0 | Unused. |
| 11-0 | R/W | 0 | V_START. Display vertical co-ordinate. |

VIU_OSD1_BLK1_CFG_W4 0x1a14

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | 0 | Frame_addr: // unsigned , default =0 Frame_addr in linear_addr |

VIU_OSD1_BLK2_CFG_W4 0x1a15

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | R/W | 0 | Line_stride : // unsigned , default =0 Line_stride in linear_addr |

VIU_OSD1_FIFO_CTRL_STAT 0x1A2b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | burst_len_sel[2] of [2:0] |
| 30 | R/W | 0 | BYTE_SWAP: In addition to endian control, further define whether to swap upper byte and lower byte within a 16-bit memory word. 1 = Swap, data[15:0] becomes {data[7:0], data[15:8]}; 0 = No swap, data[15:0] is still data[15:0]. |
| 29 | R/W | 0 | Div_swap : swap the 2 64bits word in 128bits word |
| 28-24 | R/W | 0 | Fifo_lim : when osd fifo is small than the fifo_lim*16, closed the req port of osd_rd_mif |
| 23-22 | R/W | 0 | Fifo_ctrl: 00 : for 1 word in 1 burst, 01 : for 2words in 1burst, 10 : for 4 words in 1burst, 11: reserved |
| 21-20 | R | 0 | FIFO_ST: State of the FIFO activity. 0 = Idle; 1 = FIFO requesting; 2 = FIFO request aborting. |
| 19 | R | 0 | FIFO_OVERFLOW. |
| 18-12 | R/W | 32 | FIFO_DEPTH_VAL: Define the depth of FIFO which stores 128-bit data from DDR to be FIFO_DEPTH_VAL * 8. |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 11-10 | R/W | 0 | BURST_LEN_SEL[1:0] of [2:0]: Define DDR burst request length. 0 = up to 24 per burst; 1 = up to 32 per burst; 2 = up to 48 per burst;/ 3 = up to 64 per burst. 4 = up to 96 per burst, 5 = up to 128 per burst |
| 9-5 | R/W | 4 | HOLD_FIFO_LINES: The number of lines that OSD must wait after VSYNC, before it starts request data from DDR . |
| 4 | R/W | 0 | CLEAR_ERR: One pulse to clear error status. |
| 3 | R/W | 0 | FIFO_SYNC_RST: Set 1 to reset OSD FIFO. |
| 2-1 | R/W | 0 | ENDIAN: define the endianness of the 64-bit data stored in memory, and how to convert. 0 = No conversion; 1 = Convert to {din[31:0], din[63:32]}; 2 = Convert to {din[15:0], din[31:16], din[47:32], din[63:48]}; 3 = Convert to {din[47:32], din[63:48], din[15:0], din[31:16]}; |
| 0 | R/W | 0 | URGENT. 1 = Set DDR request priority to be urgent; 0 = Set DDR request priority to be normal. |

VIU_OSD1_TEST_RDDATA 0x1A2c

During OSD debug mode (VIU_OSD1_CTRL_STAT.TEST_RD_EN = 1), the output pixels will be presented at this register.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31-24 | R | 0 | Y or R. |
| 23:16 | R | 0 | Cb or G. |
| 15-8 | R | 0 | Cr or B. |
| 7-0 | R | 0 | Alpha[8:1]. |

VIU_OSD1_PROT_CTRL 0x1a2e

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:16 | R/W | 0 | urgent_ctrl : // unsigned , default =0 |
| 15 | R.O | 0 | prot_en : // unsigned , default =0; 1=Borrow PROT's FIFO storage, either for rotate or non-rotate. |
| 12: 0 | R.O | 0 | prot_fifo_size : // unsigned , default =0; effective FIFO size when prot_en=1. |

VIU_OSD1_MALI_UNPACK_CTRL 0x1a2f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R/W | 0 | mali_unpack_en 1: OSD will unpack mali_src 0: OSD will unpack normal src |
| 28 | | | Alpha_div_en: alpha divisor enable |
| 27:26 | | | Alpha_divisor gating clk |
| 25:24 | | | Alpa_mapping_mode In osd,this bit should be set 0 when Alpha_div_en active,means 8 bits alpha mode |
| 17 | / | / | / |
| 16 | R/W | 0 | afbcd_swap_64bit: |
| 15: 12 | R/W | 1 | afbcd_r_reorder,change osd output order when use Dvalin src: 1: r_re = r ; 2: r_re = g; 3: r_re = b; 4: r_re = a; default: r_re = 0; |
| 11: 8 | | 2 | afbcd_r_reorder,change osd output order when use Dvalin src: 1: g_re = r ; 2: g_re = g; 3: g_re = b; 4: g_re = a; default: r_re = 0; |
| 7: 4 | | 3 | afbcd_r_reorder,change osd output order when use Dvalin src: 1: b_re = r ; 2: b_re = g; 3: b_re = b; 4: b_re = a; default: r_re = 0; |
| 3: 0 | | 4 | afbcd_r_reorder,change osd output order when use Dvalin src: 1: a_re = r ; 2: a_re = g; 3: a_re = b; 4: a_re = a; default: r_re = 0; |

VIU_OSD1_DIMM_CTRL 0x1adf

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 30 | R/W | 0 | OSD dimm enable,osd out will be one color when this bit active |
| 29:0 | R/W | 0 | Osd_dim_rgb_out ,osd out will be this vaaule when bit30 active |

10.2.3.42 VDIN**VDIN0_SCALE_COEF_IDX 0x1200****VDIN0_SCALE_COEF 0x1201****VDIN0_COM_CTRL0 0x1202**

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | mpeg_to_vdin_sel, 0: mpeg source to NR directly, 1: mpeg source pass through here |
| 30 | R/W | 0 | mpeg_field info which can be written by software |
| 29 | R/W | 0 | force_go_field, pulse signal |
| 28 | R/W | 0 | force_go_line, pulse signal |
| 27 | R/W | 0 | enable mpeg_go_field input signal |
| 26-20 | R/W | 0 | hold lines |
| 19 | R/W | 0 | delay_go_field function enable |
| 18-12 | R/W | 0 | delay_go_field line number |
| 11-10 | R/W | 0 | component2 output switch, 00: select component0 in, 01: select component1 in, 10: select component2 in |
| 9-8 | R/W | 0 | component1 output switch, 00: select component0 in, 01: select component1 in, 10: select component2 in |
| 7-6 | R/W | 0 | component0 output switch, 00: select component0 in, 01: select component1 in, 10: select component2 in |
| 5 | R/W | 0 | input window selection function enable |
| 4 | R/W | 0 | enable VDIN common data input, otherwise there will be no video data input |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 3-0 | R/W | 0 | vdin selection, 1: mpeg_in from dram; 2: bt656 input; 3: Reserved (component input); 4: Reserved(tvdecoder input); 5: Reserved(hdmi rx input); 6: digital video input; 7: internal loop back from Viu; 8: Reserved(mipi_csi2) ;9: Reserved(isp); 10: second bt656 input; otherwise no input. |

VDIN0_ACTIVE_MAX_PIX_CNT_STATUS 0x1203

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------------------|
| 28-16 | R | 0 | active_max_pix_cnt, readonly |
| 12-0 | R | 0 | active_max_pix_cnt_shadow, readonly |

VDIN0_LCNT_STATUS 0x1204

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------|
| 28-16 | R | 0 | go_line_cnt, readonly |
| 12-0 | R | 0 | active_line_cnt, readonly |

VDIN0_COM_STATUS0 0x1205

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------|
| 17 | R | 0 | Vid_wr_pending_dds_wrrsp |
| 16 | R | 0 | Curr_pic_sec |
| 15 | R | 0 | Curr_pic_sec_sav |
| 14-3 | R | 0 | lifo_buf_cnt |
| 2 | R | 0 | vdin_direct_done status |

| 17 | R/W | 0 | Vdi4 overflow status clear |
| 16 | R/W | 0 | Vdi4 asfifo soft reset, level signal |
| 7 | R/W | 0 | Vdi3 DE enable |
| 6 | R/W | 0 | Vdi3 go field enable |
| 5 | R/W | 0 | Vdi3 go line enable |
| 4 | R/W | 0 | Vdi3 if true, negative active input vsync |
| 3 | R/W | 0 | Vdi3 if true, negative active input hsync |
| 2 | R/W | 0 | Vdi3 vsync soft reset fifo enable |
| 1 | R/W | 0 | Vdi3 overflow status clear |
| 0 | R/W | 0 | Vdi3 asfifo soft reset, level signal |

VDIN0_WIDTHM1I_WIDTHM1O 0x120a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 28-16 | R/W | 0 | input width minus 1, after the window function |
| 12-0 | R/W | 0 | output width minus 1 |

VDIN0_SC_MISC_CTRL 0x120b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 14-8 | R/W | 0 | hsc_ini_pixi_ptr, signed data, only useful when short_lineo_en is true |
| 7 | R/W | 0 | prehsc_en |
| 6 | R/W | 0 | hsc_en |
| 5 | R/W | 0 | hsc_short_lineo_en, short line output enable |
| 4 | R/W | 0 | hsc_nearest_en |
| 3 | R/W | 0 | Hsc_phase0_always_en |
| 2-0 | R/W | 0 | hsc_bank_length |

VDIN0_HSC_PHASE_STEP 0x120c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------|
| 28-24 | R/W | 0 | integer portion |
| 23-0 | R/W | 0 | fraction portion |

VDIN0_HSC_INI_CTRL 0x120d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------|
| 30-29 | R/W | 0 | hscale rpt_p0_num |
| 28-24 | R/W | 0 | hscale ini_rcv_num |
| 23-0 | R/W | 0 | hscale ini_phase |

VDIN0_COM_STATUS2 0x120e

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------|
| 23 | R | 0 | Vdi7 fifo overflow |
| 21-16 | R | 0 | Vdi7_asfifo_cnt |
| 15 | R | 0 | Vdi6 fifo overflow |
| 13-8 | R | 0 | Vdi6_asfifo_cnt |
| 7 | R | 0 | vdi5 fifo overflow |
| 5-0 | R | 0 | vdi5_asfifo_cnt |

VDIN0_ASFIFO_CTRL2 0x120f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 25 | R/W | 0 | if true, decimation counter sync with first valid DE in the field, //otherwise the decimation counter is not sync with external signal |
| 24 | R/W | 0 | decimation de enable |
| 23-20 | R/W | 0 | decimation phase, which counter value use to decimate, |
| 19-16 | R/W | 0 | decimation number, 0: not decimation, 1: decimation 2, 2: decimation 3 |
| 7 | R/W | 0 | Vdi5 DE enable |
| 6 | R/W | 0 | Vdi5 go field enable |
| 5 | R/W | 0 | Vdi5 go line enable |
| 4 | R/W | 0 | Vdi5 if true, negative active input vsync |
| 3 | R/W | 0 | Vdi5 if true, negative active input hsync |
| 2 | R/W | 0 | Vdi5 vsync soft reset fifo enable |
| 1 | R/W | 0 | Vdi5 overflow status clear |
| 0 | R/W | 0 | Vdi5 asfifo soft reset, level signal |

VDIN0_MATRIX_CTRL 0x1210

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
|--------|-----|---------|-------------|

| | | | |
|-----|-----|---|--|
| 7 | R/W | 0 | highlight_enable |
| 6 | R/W | 0 | probe_post, if true, probe pixel data after matrix, otherwise probe pixel data before matrix |
| 5-4 | R/W | 0 | probe_sel, 00: select matrix 0, 01: select matrix 1, otherwise select nothing |
| 3-2 | R/W | 0 | matrix_coef_idx selection, 00: select mat0, 01: select mat1, otherwise select nothing |
| 1 | R/W | 0 | mat1 conversion matrix enable |
| 0 | R/W | 0 | Mat0 conversion matrix enable |

VDIN0_MATRIX_COEF00_01 0x1211

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 28-16 | R/W | 0 | coef00 |
| 12-0 | R/W | 0 | coef01 |

VDIN0_MATRIX_COEF02_10 0x1212

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 28-16 | R/W | 0 | coef02 |
| 12-0 | R/W | 0 | Coef10 |

VDIN0_MATRIX_COEF11_12 0x1213

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 28-16 | R/W | 0 | Coef11 |
| 12-0 | R/W | 0 | Coef12 |

VDIN0_MATRIX_COEF20_21 0x1214

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 28-16 | R/W | 0 | Coef20 |
| 12-0 | R/W | 0 | coef21 |

VDIN0_MATRIX_COEF22 0x1215

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 18-16 | R/W | 0 | convrs |
| 7-0 | R/W | 0 | Coef22 |

VDIN0_MATRIX_OFFSET0_1 0x1216

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 26-16 | R/W | 0 | offset0 |

| | | | |
|------|-----|---|---------|
| 10-0 | R/W | 0 | Offset1 |
|------|-----|---|---------|

VDIN0_MATRIX_OFFSET2 0x1217

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 10-0 | R/W | 0 | Offset2 |

VDIN0_MATRIX_PRE_OFFSET0_1 0x1218

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 26-16 | R/W | 0 | Pre_offset0 |
| 10-0 | R/W | 0 | Pre_Offset1 |

VDIN0_MATRIX_PRE_OFFSET2 0x1219

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 10-0 | R/W | 0 | Pre_Offset2 |

VDIN0_LFIFO_CTRL 0x121a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------|
| 11-0 | R/W | 0 | lifo_buf_size |

VDIN0_COM_GCLK_CTRL 0x121b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 15-14 | R/W | 0 | Gate clock control for blackbar detector |
| 13-12 | R/W | 0 | Gate clock control for hist |
| 11-10 | R/W | 0 | Gate clock control for line fifo |
| 9-8 | R/W | 0 | Gate clock control for matrix |
| 7-6 | R/W | 0 | Gate clock control for horizontal scaler |
| 5-4 | R/W | 0 | Gate clock control for pre scaler |
| 3-2 | R/W | 0 | Gate clock control for vdin_com_proc |
| 1-0 | R/W | 0 | Gate clock control for the vdin reg |

VDIN0_INTF_WIDTHM1 0x121c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 26 | R/W | 0 | VDIN write mif bvalid_sel: 1. Bvalid_signal from bus, 0: bytes_wr handshakes |
| 25 | R/W | 0 | VDIN write mif burst last sel: 1. All kind of burst last signal include ext_data_last. 0. Used the normal burst last signal |
| 12-0 | R/W | 0 | VDIN input interface width minus 1, before the window function, after the de decimation |

VDIN0_WR_CTRL2 0x121f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 19 | R/W | 0 | Vdin0 wr bit10 mode |
| 18 | R/W | 0 | Data_ext_en 1: send out data if req was interrupt by soft reset 0 : normal mode |
| 17:16 | R/W | 1 | Words_lim[1:0] : it would not send out request before Words_lim *16 words were ready |
| 15:12 | R/W | 1 | Burst_lim : 00 , 1 word in 1burst , 01 ,2 words in 1burst, 10, 4 words in 1burst , 11 reserved |
| 10:9 | R/W | 0 | Words_lim[3:2] |
| 8 | R/W | 0 | 1: discard data before line fifo, 0: normal mode |
| 7-0 | R/W | 0 | Write chroma canvas address, for NV12/21 mode. |

VDIN0_WR_CTRL 0x1220

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:30 | R/W | 0 | vdin0_wr_mif_hconv_mode. Applicable only to vdin_write_format=0 or 2. 0=Output every even pixel's CbCr; 1=Output every odd pixel's CbCr; 2=Output an average value per even&odd pair of pixels; 3=Output all CbCr. Only applies to vdin_write_format =2. |
| 29 | R/W | 0 | vdin0_wr_mif_no_clk_gate. If true, enable free-run clock. |
| 28 | R/W | 0 | clear write response counter in the vdin write memory interface |
| 27 | R/W | 1 | eol_sel, 1: use eol as the line end indication, 0: use width as line end indication in the vdin write memory interface |
| 26 | R/W | 0 | vcp_nr_en. Only used in VDIN0. NOT used in VDIN1 |
| 25 | R/W | 1 | vcp_wr_en Only used in VDIN0. NOT used in VDIN1 |
| 24 | R/W | 1 | vcp_in_en Only used in VDIN0. NOT used in VDIN1 |
| 23 | R/W | 1 | vdin frame reset enable, if true, it will provide frame reset during go_field(vsync) to the modules after that |
| 22 | R/W | 1 | vdin line fifo soft reset enable, meaning, if true line fifo will reset during go_field (vsync) |
| 21 | R/W | 0 | vdin direct write done status clear bit |
| 20 | R/W | 0 | vdin NR write done status clear bit |
| 19 | R/W | 0 | Vdin0_wr words swap : swap the 2 64bits word in 128 words |
| 18 | R/W | 0 | vdin0_wr_mif_swap_cbcr. Applicable only to vdin_write_format =2. 0=Output CbCr (NV12); 1=Output CrCb (NV21); |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 17:16 | R/W | 0 | vdin0_wr_mif_vconv_mode. Applicable only to vdin_write_format=2. 0=Output every even line's CbCr; 1=Output every odd line's CbCr; 2=Reserved; 3=Output all CbCr. |
| 13-12 | R/W | 0 | vdin_write_format, 0: 4:2:2 to one canvas; 1: 4:4:4 to one canvas; 2: Y to luma canvas, CbCr to chroma canvas, for NV12/21; 3: yuv422 full pack mode |
| 11 | R/W | 0 | vdin write canvas double buffer enable, means the canvas address will be latched by vsync before using |
| 9 | R/W | 0 | vdin write request urgent |
| 8 | R/W | 0 | vdin write request enable |
| 7-0 | R/W | 0 | Write canvas address (For NV12/21 mode, it's LUMA canvas) |

VDIN0_WR_H_START_END 0x1221

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------|
| 29 | R/W | 0 | if true, horizontal reverse |
| 28-16 | R/W | 0 | start |
| 12-0 | R/W | 0 | end |

VDIN0_WR_V_START_END 0x1222

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------|
| 29 | R/W | 0 | if true, vertical reverse |
| 28-16 | R/W | 0 | start |
| 12-0 | R/W | 0 | end |

VDIN0_VSC_PHASE_STEP 0x1223

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------|
| 24-16 | R/W | 0 | integer portion |
| 19-0 | R/W | 0 | fraction portion |

VDIN0_VSC_INI_CTRL 0x1224

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 23 | R/W | 0 | vsc_en, vertical scaler enable |
| 21 | R/W | 0 | vsc_phase0_always_en, when scale up, you have to set it to 1 |
| 20-16 | R/W | 0 | ini skip_line_num |

| | | | |
|------|-----|---|-------------------|
| 15-0 | R/W | 0 | vscaler ini_phase |
|------|-----|---|-------------------|

VDIN0_SCIN_HEIGHTM1 0x1225

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------|
| 12-0 | R/W | 0x437 | scaler input height minus 1 |

VDIN0_DUMMY_DATA 0x1226

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------|
| 23-16 | R/W | 0 | dummy component 0 |
| 15-8 | R/W | 0x80 | dummy component 1 |
| 7-0 | R/W | 0x80 | dummy component 2 |

VDIN0_MATRIX_PROBE_COLOR 0x1228

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 29-20 | R/W | 0 | component 0 |
| 19-10 | R/W | 0 | omponent 1 |
| 9-0 | R/W | 0 | component 2 |

VDIN0_MATRIX_HL_COLOR 0x1229

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 23-16 | R/W | 0 | component 0 |
| 15-8 | R/W | 0 | component 1 |
| 7-0 | R/W | 0 | component 2 |

VDIN0_MATRIX_PROBE_POS 0x122a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------|
| 28-16 | R/W | 0 | probe x, position |
| 12-0 | R/W | 0 | probe y, postion |

VDIN0_HIST_CTRL 0x1230

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-24 | R/W | 0 | No use |
| 23-16 | R/W | 0 | No use |
| 11 | R/W | 0 | Hist 34bin only mode |
| 10-9 | R/W | 0 | ldim_stts_din_sel, 00: from matrix0 dout, 01: from vsc_dout, 10: from matrix1 dout, 11: form matrix1 din |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 8 | R/W | 0 | ldim_stts_en |
| 6-5 | R/W | 0 | hist_dnlp_low the real pixels in each bins got by VDIN_DNLP_HISTXX should multiple with $2^{(dnlp_low+3)}$ |
| 3-2 | R/W | 0 | hist_din_sel the source used for hist statistics. 2'b00: from MAT0_dout; 2'b01: from vsc_dout; 2'b10: from mat1_dout, 3: mat1_din |
| 1 | R/W | 0 | hist_win_en 1'b0: hist used for full picture; 1'b1: hist used for pixels within hist window |
| 0 | R/W | 0 | hist_spl_en 1'b0: disable hist readback; 1'b1: enable hist readback |

VDIN0_HIST_H_START_END 0x1231

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 28-16 | R/W | 0 | hist_hstart horizontal start value to define hist window |
| 12-0 | R/W | 0 | hist_hend horizontal end value to define hist window |

VDIN0_HIST_V_START_END 0x1232

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 28-16 | R/W | 0 | hist_vstart vertical start value to define hist window |
| 12-0 | R/W | 0 | hist_vend vertical end value to define hist window |

VDIN0_HIST_MAX_MIN 0x1233

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------|
| 15-8 | R | 0 | hist_max maximum value |
| 7-0 | R | 0 | hist_min minimum value |

VDIN0_HIST_SPL_VAL 0x1234

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-0 | R | 0 | hist_spl_rd , counts for the total luma value |

VDIN0_HIST_SPL_PIX_CNT 0x1235

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 21-0 | R | 0 | hist_spl_pixel_count, counts for the total calculated pixels |

VDIN0_HIST_CHROMA_SUM 0x1236

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-0 | R | 0 | hist_chroma_sum , counts for the total chroma value |

VDIN0_DNLP_HIST00 0x1237

//0-255 are splitted to 64 bins evenly, and VDIN_DNLP_HISTXX

//are the statistic number of pixels that within each bin.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------|
| 31-16 | R | 0 | counts for the 2nd bin |
| 15-0 | R | 0 | counts for the 1st bin |

VDIN0_DNLP_HIST01 0x1238

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------|
| 31-16 | R | 0 | counts for the 4th bin |
| 15-0 | R | 0 | counts for the 3rd bin |

VDIN0_DNLP_HIST02 0x1239

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------|
| 31-16 | R | 0 | counts for the 6th bin |
| 15-0 | R | 0 | counts for the 5th bin |

VDIN0_DNLP_HIST03 0x123a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------|

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | mpeg_to_vdin_sel, 0: mpeg source to NR directly, 1: mpeg source pass through here |
| 30 | R/W | 0 | mpeg_field info which can be written by software |
| 29 | R/W | 0 | force go_field, pulse signal |
| 28 | R/W | 0 | force go_line, pulse signal |
| 27 | R/W | 0 | enable mpeg_go_field input signal |
| 26-20 | R/W | 0 | hold lines |
| 19 | R/W | 0 | delay go_field function enable |
| 18-12 | R/W | 0 | delay go_field line number |
| 11-10 | R/W | 0 | component2 output switch, 00: select component0 in, 01: select component1 in, 10: select component2 in |
| 9-8 | R/W | 0 | component1 output switch, 00: select component0 in, 01: select component1 in, 10: select component2 in |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 7-6 | R/W | 0 | component0 output switch, 00: select component0 in, 01: select component1 in, 10: select component2 in |
| 5 | R/W | 0 | input window selection function enable |
| 4 | R/W | 0 | enable VDIN common data input, otherwise there will be no video data input |
| 3-0 | R/W | 0 | vdin selection, 1: mpeg_in from dram; 2: bt656 input; 3: Reserved (component input); 4: Reserved(tvdecoder input); 5: Reserved(hdmi rx input); 6: digital video input; 7: internal loop back from Viu; 8: Reserved(mipi_csi2) ;9: Reserved(isp); 10: second bt656 input; otherwise no input. |

VDIN1_ACTIVE_MAX_PIX_CNT_STATUS 0x1303

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------------------|
| 28-16 | R | 0 | active_max_pix_cnt, readonly |
| 12-0 | R | 0 | active_max_pix_cnt_shadow, readonly |

VDIN1_LCNT_STATUS 0x1304

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------|
| 28-16 | R | 0 | go_line_cnt, readonly |
| 12-0 | R | 0 | active_line_cnt, readonly |

VDIN1_COM_STATUS0 0x1305

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 12-3 | R | 0 | lffifo_buf_cnt |
| 2 | R | 0 | vdin_direct_done status |
| 1 | R | 0 | vdin_nr_done status |
| 0 | R | 0 | field |

VDIN1_COM_STATUS1 0x1306

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------|
| 31 | R | 0 | vdi4 fifo overflow |
| 29-24 | R | 0 | vdi3_asfifo_cnt |
| 23 | R | 0 | vdi3 fifo overflow |
| 21-16 | R | 0 | vdi3_asfifo_cnt |
| 15 | R | 0 | vdi2 fifo overflow |
| 13-8 | R | 0 | vdi2_asfifo_cnt |
| 7 | R | 0 | vdi1 fifo overflow |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------|
| 5-0 | R | 0 | vdi1_asfifo_cnt |

VDIN1_LCNT_SHADOW_STATUS 0x1307

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|----------------------------------|
| 28-16 | R | 0 | go_line_cnt_shadow, readonly |
| 12-0 | R | 0 | active_line_cnt_shadow, readonly |

VDIN1_ASFIFO_CTRL0 0x1308

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 23 | R/W | 0 | vdi2 DE enable |
| 22 | R/W | 0 | vdi2 go field enable |
| 21 | R/W | 0 | vdi2 go line enable |
| 20 | R/W | 0 | vdi2 if true, negative active input vsync |
| 19 | R/W | 0 | vdi2 if true, negative active input hsync |
| 18 | R/W | 0 | vdi2 vsync soft reset fifo enable |
| 17 | R/W | 0 | vdi2 overflow status clear |
| 16 | R/W | | vdi2 asfifo soft reset, level signal |
| 7 | R/W | 0 | Vdi1 DE enable |
| 6 | R/W | 0 | Vdi1 go field enable |
| 5 | R/W | 0 | Vdi1 go line enable |
| 4 | R/W | 0 | Vdi1 if true, negative active input vsync |
| 3 | R/W | 0 | Vdi1 if true, negative active input hsync |
| 2 | R/W | 0 | Vdi1 vsync soft reset fifo enable |
| 1 | R/W | 0 | Vdi1 overflow status clear |
| 0 | R/W | 0 | Vdi1 asfifo soft reset, level signal |

VDIN1_ASFIFO_CTRL1 0x1309

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 23 | R/W | 0 | Vdi4 DE enable |
| 22 | R/W | 0 | Vdi4 go field enable |
| 21 | R/W | 0 | Vdi4 go line enable |
| 20 | R/W | 0 | Vdi4 if true, negative active input vsync |

| | | | |
|----|-----|---|---|
| 19 | R/W | 0 | Vdi4 if true, negative active input hsync |
| 18 | R/W | 0 | Vdi4 vsync soft reset fifo enable |
| 17 | R/W | 0 | Vdi4 overflow status clear |
| 16 | R/W | 0 | Vdi4 asfifo soft reset, level signal |
| 7 | R/W | 0 | Vdi3 DE enable |
| 6 | R/W | 0 | Vdi3 go field enable |
| 5 | R/W | 0 | Vdi3 go line enable |
| 4 | R/W | 0 | Vdi3 if true, negative active input vsync |
| 3 | R/W | 0 | Vdi3 if true, negative active input hsync |
| 2 | R/W | 0 | Vdi3 vsync soft reset fifo enable |
| 1 | R/W | 0 | Vdi3 overflow status clear |
| 0 | R/W | 0 | Vdi3 asfifo soft reset, level signal |

VDIN1_WIDTHM1I_WIDTHM1O 0x130a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 28-16 | R/W | 0 | input width minus 1, after the window function |
| 12-0 | R/W | 0 | output width minus 1 |

VDIN1_SC_MISC_CTRL 0x130b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 14-8 | R/W | 0 | hsc_ini_pixi_ptr, signed data, only useful when short_lineo_en is true |
| 7 | R/W | 0 | prehsc_en |
| 6 | R/W | 0 | hsc_en |
| 5 | R/W | 0 | hsc_short_lineo_en, short line output enable |
| 4 | R/W | 0 | hsc_nearest_en |
| 3 | R/W | 0 | Hsc_phase0_always_en |
| 3 | R/W | 0 | phase0_always_en |
| 2-0 | R/W | 0 | hsc_bank_length |

VDIN1_HSC_PHASE_STEP 0x130c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------|
| 28-24 | R/W | 0 | integer portion |
| 23-0 | R/W | 0 | fraction portion |

VDIN1_HSC_INI_CTRL 0x130d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------|
| 30-29 | R/W | 0 | hscale rpt_p0_num |
| 28-24 | R/W | 0 | hscale ini_rcv_num |
| 23-0 | R/W | 0 | hscale ini_phase |

VDIN1_COM_STATUS2 0x130e

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------|
| 23 | R | 0 | Vdi7 fifo overflow |
| 21-16 | R | 0 | Vdi7_asfifo_cnt |
| 15 | R | 0 | Vdi6 fifo overflow |
| 13-8 | R | 0 | Vdi6_asfifo_cnt |
| 7 | R | 0 | vdi5 fifo overflow |
| 5-0 | R | 0 | vdi5_asfifo_cnt |

VDIN1_ASFIFO_CTRL2 0x130f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 25 | R/W | 0 | if true, decimation counter sync with first valid DE in the field, //otherwise the decimation counter is not sync with external signal |
| 24 | R/W | 0 | decimation de enable |
| 23-20 | R/W | 0 | decimation phase, which counter value use to decimate, |
| 19-16 | R/W | 0 | decimation number, 0: not decimation, 1: decimation 2, 2: decimation 3 |
| 7 | R/W | 0 | Vdi5 DE enable |
| 6 | R/W | 0 | Vdi5 go field enable |
| 5 | R/W | 0 | Vdi5 go line enable |
| 4 | R/W | 0 | Vdi5 if true, negative active input vsync |
| 3 | R/W | 0 | Vdi5 if true, negative active input hsync |
| 2 | R/W | 0 | Vdi5 vsync soft reset fifo enable |
| 1 | R/W | 0 | Vdi5 overflow status clear |
| 0 | R/W | 0 | Vdi5 asfifo soft reset, level signal |

VDIN1_MATRIX_CTRL 0x1310

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
|--------|-----|---------|-------------|

| | | | |
|---|-----|---|-------------------------------|
| 0 | R/W | 0 | post conversion matrix enable |
|---|-----|---|-------------------------------|

VDIN1_MATRIX_COEF00_01 0x1311

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 28-16 | R/W | 0 | coef00 |
| 12-0 | R/W | 0 | coef01 |

VDIN1_MATRIX_COEF02_10 0x1312

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 28-16 | R/W | 0 | coef02 |
| 12-0 | R/W | 0 | Coef10 |

VDIN1_MATRIX_COEF11_12 0x1313

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 28-16 | R/W | 0 | Coef11 |
| 12-0 | R/W | 0 | Coef12 |

VDIN1_MATRIX_COEF20_21 0x1314

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 28-16 | R/W | 0 | Coef20 |
| 12-0 | R/W | 0 | coef21 |

VDIN1_ 0x1315

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 18-16 | R/W | 0 | convrs |
| 7-0 | R/W | 0 | Coef22 |

VDIN1_MATRIX_OFFSET0_1 0x1316

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 26-16 | R/W | 0 | offset0 |
| 10-0 | R/W | 0 | Offset1 |

VDIN1_MATRIX_OFFSET2 0x1317

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 10-0 | R/W | 0 | Offset2 |

VDIN1_MATRIX_PRE_OFFSET0_1 0x1318

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 26-16 | R/W | 0 | Pre_offset0 |
| 10-0 | R/W | 0 | Pre_Offset1 |

VDIN1_MATRIX_PRE_OFFSET2 0x1319

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 10-0 | R/W | 0 | Pre_Offset2 |

VDIN1_LFIFO_CTRL 0x131a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|----------------|
| 11-0 | R/W | 0 | lfifo_buf_size |

VDIN1_COM_GCLK_CTRL 0x131b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 15-14 | R/W | 0 | Gate clock control for blackbar detector |
| 13-12 | R/W | 0 | Gate clock control for hist |
| 11-10 | R/W | 0 | Gate clock control for line fifo |
| 9-8 | R/W | 0 | Gate clock control for matrix |
| 7-6 | R/W | 0 | Gate clock control for horizontal scaler |
| 5-4 | R/W | 0 | Gate clock control for pre scaler |
| 3-2 | R/W | 0 | Gate clock control for vdin_com_proc |
| 1-0 | R/W | 0 | Gate clock control for the vdin reg |

VDIN1_INTF_WIDTHM1 0x131c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 26 | R/W | 0 | VDIN write mif bvalid_sel: 1. Bvalid_signal from bus, 0: bytes_wr handshakes |
| 25 | R/W | 0 | VDIN write mif burst last sel: 1. All kind of burst last signal include ext_data_last. 0. Used the normal burst last signal |
| 12-0 | R/W | 0 | VDIN input interface width minus 1, before the window function, after the de decimation |

VDIN1_WR_CTRL2 0x131f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------|
| 19 | R/W | 0 | Vdin1 wr bit10 mode |

| | | | |
|-------|-----|---|--|
| 18 | R/W | 0 | Data_ext_en 1: send out data if req was interrupt by soft reset 0 : normal mode |
| 17:16 | R/W | 1 | Words_lim[1:0]: it would not send out request before Words_lim *16 words were ready |
| 15:12 | R/W | 1 | Burst_lim : 00 , 1 word in 1burst , 01 ,2 words in 1burst, 10, 4 words in 1burst , 11 reserved |
| 10:9 | R/W | 0 | Words_lim[3:2] |
| 8 | R/W | 0 | 1: discard data before line fifo, 0: normal mode |
| 7-0 | R/W | 0 | Write chroma canvas address, for NV12/21 mode. |

VDIN1_WR_CTRL 0x1320

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-30 | R/W | 0 | vdin1_wr_mif_hconv_mode. Applicable only to vdin_write_format=0 or 2. 0=Output every even pixel's CbCr; 1=Output every odd pixel's CbCr; 2=Output an average value per even&odd pair of pixels; 3=Output all CbCr. Only applies to vdin_write_format =2. |
| 29 | R/W | 0 | vdin1_wr_mif_no_clk_gate. If true, enable free-run clock. |
| 28 | R/W | 0 | clear write response counter in the vdin write memory interface |
| 27 | R/W | 1 | eol_sel, 1: use eol as the line end indication, 0: use width as line end indication in the vdin write memory interface |
| 23 | R/W | 1 | vdin frame reset enable, if true, it will provide frame reset during go_field(vsync) to the modules after that |
| 22 | R/W | 1 | vdin line fifo soft reset enable, meaning, if true line fifo will reset during go_field (vsync) |
| 21 | R/W | 0 | vdin direct write done status clear bit |
| 20 | R/W | 0 | vdin NR write done status clear bit |
| 19 | R/W | 0 | Vdin0_wr words swap : swap the 2 64bits word in 128 words |
| 18 | R/W | 0 | vdin1_wr_mif_swap_cbcr. Applicable only to vdin_write_format =2. 0=Output CbCr (NV12); 1=Output CrCb (NV21); |
| 17:16 | R/W | 0 | vdin1_wr_mif_vconv_mode. Applicable only to vdin_write_format=2. 0=Output every even line's CbCr; 1=Output every odd line's CbCr; 2=Reserved; 3=Output all CbCr. |
| 13-12 | R/W | 0 | vdin_write_format, 0: 4:2:2 to one canvas; 1: 4:4:4 to one canvas; 2: Y to luma canvas, CbCr to chroma canvas, for NV12/21; 3: 422 10 bit full pack mode |
| 11 | R/W | 0 | vdin write canvas double buffer enable, means the canvas address will be latched by vsync before using |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 9 | R/W | 0 | vdin write request urgent |
| 8 | R/W | 0 | vdin write request enable |
| 7-0 | R/W | 0 | Write canvas address (For NV12/21 mode, it's LUMA canvas) |

VDIN1_WR_H_START_END 0x1321

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 27-16 | R/W | 0 | start |
| 11-0 | R/W | 0 | end |

VDIN1_WR_V_START_END 0x1322

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 27-16 | R/W | 0 | start |
| 11-0 | R/W | 0 | end |

VDIN1_VSC_PHASE_STEP 0x1323

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------|
| 24-16 | R/W | 0 | integer portion |
| 19-0 | R/W | 0 | fraction portion |

VDIN1_VSC_INI_CTRL 0x1324

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 23 | R/W | 0 | vsc_en, vertical scaler enable |
| 21 | R/W | 0 | vsc_phase0_always_en, when scale up, you have to set it to 1 |
| 20-16 | R/W | 0 | ini skip_line_num |
| 15-0 | R/W | 0 | vscaler ini_phase |

VDIN1_SCIN_HEIGHTM1 0x1325

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------|
| 12-0 | R/W | 0x437 | scaler input height minus 1 |

VDIN1_DUMMY_DATA 0x1326

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------|
| 23-16 | R/W | 0 | dummy component 0 |
| 15-8 | R/W | 0x80 | dummy component 1 |

| | | | |
|-----|-----|------|-------------------|
| 7-0 | R/W | 0x80 | dummy component 2 |
|-----|-----|------|-------------------|

VDIN1_MATRIX_PROBE_COLOR 0x1328

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 29-20 | R/W | 0 | component 0 |
| 19-10 | R/W | 0 | omponent 1 |
| 9-0 | R/W | 0 | component 2 |

VDIN1_MATRIX_HL_COLOR 0x1329

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 23-16 | R/W | 0 | component 0 |
| 15-8 | R/W | 0 | component 1 |
| 7-0 | R/W | 0 | component 2 |

VDIN1_MATRIX_PROBE_POS 0x132a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------|
| 28-16 | R/W | 0 | probe x, position |
| 12-0 | R/W | 0 | probe y, position |

VDIN1_HIST_CTRL 0x1330

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-24 | R/W | 0 | Hist pixel white threshold, larger than this will be counted as white pixel number |
| 23-16 | R/W | 0 | Hist pixel black threshold, less than this will be counted as black pixel number |
| 11 | R/W | 0 | Hist 32bin only mode |
| 10-9 | R/W | 0 | ldim_stts_din_sel, 00: from matrix0 dout, 01: from vsc_dout, 10: from matrix1 dout, 11: form matrix1 din |
| 8 | R/W | 0 | ldim_stts_en |
| 6-5 | R/W | 0 | hist_dnlp_low the real pixels in each bins got by VDIN_DNLP_HISTXX should multiple with $2^{(dnlp_low+3)}$ |
| 3-2 | R/W | 0 | hist_din_sel the source used for hist statistics. 2'b00: from MAT0_dout; 2'b01: from vsc_dout; 2'b10: from mat1_dout, 3: mat1_din |
| 1 | R/W | 0 | hist_win_en 1'b0: hist used for full picture; 1'b1: hist used for pixels within hist window |
| 0 | R/W | 0 | hist_spl_en 1'b0: disable hist readback; 1'b1: enable hist readback |

VDIN1_HIST_H_START_END 0x1331

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 28-16 | R/W | 0 | hist_hstart horizontal start value to define hist window |
| 12-0 | R/W | 0 | hist_hend horizontal end value to define hist window |

VDIN1_HIST_V_START_END 0x1332

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 28-16 | R/W | 0 | hist_vstart vertical start value to define hist window |
| 12-0 | R/W | 0 | hist_vend vertical end value to define hist window |

VDIN1_HIST_MAX_MIN 0x1333

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------|
| 15-8 | R | 0 | hist_max maximum value |
| 7-0 | R | 0 | hist_min minimum value |

VDIN1_HIST_SPL_VAL 0x1334

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-0 | R | 0 | hist_spl_rd , counts for the total luma value |

VDIN1_HIST_SPL_PIX_CNT 0x1335

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 21-0 | R | 0 | hist_spl_pixel_count, counts for the total calculated pixels |

VDIN1_HIST_CHROMA_SUM 0x1336

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-0 | R | 0 | hist_chroma_sum , counts for the total chroma value |

VDIN1_DNLP_HIST00 0x1337

//0-255 are splitted to 64 bins evenly, and VDIN_DNLP_HISTXX

//are the statistic number of pixels that within each bin.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------|
| 31-16 | R | 0 | counts for the 2nd bin |
| 15-0 | R | 0 | counts for the 1st bin |

VDIN1_DNLP_HIST01 0x1338

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------|
| 31-16 | R | 0 | counts for the 4th bin |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------|
| 15-0 | R | 0 | counts for the 3rd bin |

VDIN1_DNLP_HIST02 0x1339

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------|
| 31-16 | R | 0 | counts for the 6th bin |
| 15-0 | R | 0 | counts for the 5th bin |

VDIN1_DNLP_HIST03 0x133a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------|
| 31-16 | R | 0 | counts for the 8th bin |
| 15-0 | R | 0 | counts for the 7th bin |

VDIN1_DNLP_HIST04 0x133b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 10th bin |
| 15-0 | R | 0 | counts for the 9th bin |

VDIN1_DNLP_HIST05 0x133c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 12th bin |
| 15-0 | R | 0 | counts for the 11th bin |

VDIN1_DNLP_HIST06 0x133d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 14th bin |
| 15-0 | R | 0 | counts for the 13th bin |

VDIN1_DNLP_HIST07 0x133e

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 16th bin |
| 15-0 | R | 0 | counts for the 15th bin |

VDIN1_DNLP_HIST08 0x133f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------|
| 31-16 | R | 0 | counts for the 8th bin |
| 15-0 | R | 0 | counts for the 7th bin |

VI_DNLP_HIST04 0x2e0b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 10th bin |
| 15-0 | R | 0 | counts for the 9th bin |

VI_DNLP_HIST05 0x2e0c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 12th bin |
| 15-0 | R | 0 | counts for the 11th bin |

VI_DNLP_HIST06 0x2e0d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 14th bin |
| 15-0 | R | 0 | counts for the 13th bin |

VI_DNLP_HIST07 0x2e0e

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 16th bin |
| 15-0 | R | 0 | counts for the 15th bin |

VI_DNLP_HIST08 0x2e0f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 18th bin |
| 15-0 | R | 0 | counts for the 17th bin |

VI_DNLP_HIST09 0x2e10

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 20th bin |
| 15-0 | R | 0 | counts for the 19th bin |

VI_DNLP_HIST10 0x2e11

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 22nd bin |
| 15-0 | R | 0 | counts for the 21st bin |

VI_DNLP_HIST11 0x2e12

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 24th bin |
| 15-0 | R | 0 | counts for the 23rd bin |

VI_DNLP_HIST12 0x2e13

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
|--------|-----|---------|-------------|

| | | | |
|-------|---|---|-------------------------|
| 31-16 | R | 0 | counts for the 26th bin |
| 15-0 | R | 0 | counts for the 25th bin |

VI_DNLP_HIST13 0x2e14

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 28th bin |
| 15-0 | R | 0 | counts for the 27th bin |

VI_DNLP_HIST14 0x2e15

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 30th bin |
| 15-0 | R | 0 | counts for the 29th bin |

VI_DNLP_HIST15 0x2e16

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 32nd bin |
| 15-0 | R | 0 | counts for the 31st bin |

VI_DNLP_HIST16 0x2e17

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 34th bin |
| 15-0 | R | 0 | counts for the 33rd bin |

VI_DNLP_HIST17 0x2e18

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 36th bin |
| 15-0 | R | 0 | counts for the 35th bin |

VI_DNLP_HIST18 0x2e19

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 38th bin |
| 15-0 | R | 0 | counts for the 37th bin |

VI_DNLP_HIST19 0x2e1a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 40th bin |

| | | | |
|------|---|---|-------------------------|
| 15-0 | R | 0 | counts for the 39th bin |
|------|---|---|-------------------------|

VI_DNLP_HIST20 0x2e1b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 42nd bin |
| 15-0 | R | 0 | counts for the 41st bin |

VI_DNLP_HIST21 0x2e1c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 44th bin |
| 15-0 | R | 0 | counts for the 43rd bin |

VI_DNLP_HIST22 0x2e1d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 46th bin |
| 15-0 | R | 0 | counts for the 45th bin |

VI_DNLP_HIST23 0x2e1e

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 48th bin |
| 15-0 | R | 0 | counts for the 47th bin |

VI_DNLP_HIST24 0x2e1f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 50th bin |
| 15-0 | R | 0 | counts for the 49th bin |

VI_DNLP_HIST25 0x2e20

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 52nd bin |
| 15-0 | R | 0 | counts for the 51st bin |

VI_DNLP_HIST26 0x2e21

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 54th bin |
| 15-0 | R | 0 | counts for the 53rd bin |

VI_DNLP_HIST27 0x2e22

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 56th bin |
| 15-0 | R | 0 | counts for the 55th bin |

VI_DNLP_HIST28 0x2e23

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 58th bin |
| 15-0 | R | 0 | counts for the 57th bin |

VI_DNLP_HIST29 0x2e24

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 60th bin |
| 15-0 | R | 0 | counts for the 59th bin |

VI_DNLP_HIST30 0x2e25

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 62nd bin |
| 15-0 | R | 0 | counts for the 61st bin |

VI_DNLP_HIST31 0x2e26

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 31-16 | R | 0 | counts for the 64th bin |
| 15-0 | R | 0 | counts for the 63rd bin |

VI_DNLP_HIST31 0x2e27

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-16 | R | 0 | counts for the 66th bin, for white pix |
| 15-0 | R | 0 | counts for the 65th bin, for black pix |

VI_HIST_PIC_SIZE 0x2e28

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------|
| 28-16 | R/W | 0 | Hist_pic_height |
| 12-0 | R/W | 0 | Hist_pic_width |

VI_HIST_GCLK_CTRL 0x2e2a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
|--------|-----|---------|-------------|

| | | | |
|-----|-----|---|--|
| 5-4 | R/W | 0 | Gated clock control of hist_clk |
| 3-2 | R/W | 0 | Gated clock control of clk0 |
| 1-0 | R/W | 0 | Gated clock control of hist register clock |

10.2.3.43 HDMITX Top-Level and HDMI TX Contoller IP Register Access

Accessing HDMITX Top-Level and TX Contoller IP registers is by directly accessing memory addresses. Due to the difference between the data width of Top-level register and IP register – Top-level 4-byte wide and IP register 1-byte wide, below list the correct ways to access Top-level and IP registers.

To access Top-level registers:

```
#define HDMITX_TOP_BASE_OFFSET          0xff608000
#define HDMITX_TOP_REVOCMEM_ADDR_S     0x2000
#define HDMITX_TOP_REVOCMEM_ADDR_E     0x365E
void hdmitx_wr_only_TOP (uint32_t addr, uint32_t data) {
    if ((addr >= HDMITX_TOP_REVOCMEM_ADDR_S) &&
        (addr <= HDMITX_TOP_REVOCMEM_ADDR_E)) {
        *(volatile uint8_t*)(HDMITX_TOP_BASE_OFFSET+addr) = (uint8_t)(data&0xff);
    } else {
        *(volatile uint32_t*)(HDMITX_TOP_BASE_OFFSET+addr) = (data);
    }
}
uint32_t hdmitx_rd_TOP (uint32_t addr) {
    uint32_t data;
    if ((addr >= HDMITX_TOP_REVOCMEM_ADDR_S) &&
        (addr <= HDMITX_TOP_REVOCMEM_ADDR_E)) {
        data = (uint32_t)*((volatile uint8_t*)(HDMITX_TOP_BASE_OFFSET+addr));
    } else {
        data = *(volatile uint32_t*)(HDMITX_TOP_BASE_OFFSET+addr);
    }
    return (data);
}
```

10.2.3.44 HDCP2.2 IP Register Access

Table 10-1 HDCP2.2 IP register base address

| Absolute Address | Address Mnemonic | Description |
|------------------|----------------------|---|
| 0xffe01000 | ELP_ESM_HPI_REG_BASE | Address base to HDCP2.2 IP register access. |

To write to an HDCP2.2 IP register:

```
*((volatile uint32_t *) (ELP_ESM_HPI_REG_BASE+addr)) = data;
```

To read from an HDCP2.2 IP register:

```
data = *((volatile uint32_t *) (ELP_ESM_HPI_REG_BASE+addr));
```

Table 10-2 HDMITX Top-Level Registers

| Addr | Name | RW | Function |
|----------|-------------------------------|----|--|
| 0x000<<2 | HDMITX_TOP_SW_RESET | RW | Software reset sub-modules. |
| 0x001<<2 | HDMITX_TOP_CLK_CNTL | RW | Clock gating and inversion. |
| 0x002<<2 | HDMITX_TOP_HPD_FILTER | RW | HPD and RxSense input glitch filter. |
| 0x003<<2 | HDMITX_TOP_INTR_MASKN | RW | Interrupt mask. |
| 0x004<<2 | HDMITX_TOP_INTR_STAT | RW | Interrupt status. |
| 0x005<<2 | HDMITX_TOP_INTR_STAT_CLR | W | Interrupt clear. |
| 0x006<<2 | HDMITX_TOP_BIST_CNTL | RW | Build-In Self Test(BIST) control. |
| 0x007<<2 | HDMITX_TOP_SHIFT_PTTN_012 | RW | Shift pattern for BIST. |
| 0x008<<2 | HDMITX_TOP_SHIFT_PTTN_345 | RW | Shift pattern for BIST. |
| 0x009<<2 | HDMITX_TOP_SHIFT_PTTN_67 | RW | Shift pattern for BIST. |
| 0x00A<<2 | HDMITX_TOP_TMDS_CLK_PTTN_01 | RW | TMDS clock pattern for generating /10 or /40 rate clock. |
| 0x00B<<2 | HDMITX_TOP_TMDS_CLK_PTTN_23 | RW | TMDS clock pattern for generating /10 or /40 rate clock. |
| 0x00C<<2 | HDMITX_TOP_TMDS_CLK_PTTN_CNTL | RW | TMDS clock pattern for generating /10 or /40 rate clock. |
| 0x00D<<2 | HDMITX_TOP_REVOCMEM_STAT | RW | Revocmem status |
| 0x00E<<2 | HDMITX_TOP_STAT0 | RW | Status. |
| 0x010<<2 | HDMITX_TOP_SKP_CNTL_STAT | RW | SKP interface control for HDCP2.2. |
| 0x011<<2 | HDMITX_TOP_NONCE_0 | W | Nonce[31:0] for HDCP2.2. |
| 0x012<<2 | HDMITX_TOP_NONCE_1 | W | Nonce[63:32] for HDCP2.2. |
| 0x013<<2 | HDMITX_TOP_NONCE_2 | W | Nonce[95:64] for HDCP2.2. |
| 0x014<<2 | HDMITX_TOP_NONCE_3 | W | Nonce[127:96] for HDCP2.2. |
| 0x015<<2 | HDMITX_TOP_PKF_0 | W | PKF[31:0] for HDCP2.2. |
| 0x016<<2 | HDMITX_TOP_PKF_1 | W | PKF[63:32] for HDCP2.2. |
| 0x017<<2 | HDMITX_TOP_PKF_2 | W | PKF[95:64] for HDCP2.2. |
| 0x018<<2 | HDMITX_TOP_PKF_3 | W | PKF[127:96] for HDCP2.2. |
| 0x019<<2 | HDMITX_TOP_DUK_0 | W | DUK [31:0] for HDCP2.2. |

| Addr | Name | RW | Function |
|----------|------------------------------|----|---|
| 0x01A<<2 | HDMITX_TOP_DUK_1 | W | DUK [63:32] for HDCP2.2. |
| 0x01B<<2 | HDMITX_TOP_DUK_2 | W | DUK [95:64] for HDCP2.2. |
| 0x01C<<2 | HDMITX_TOP_DUK_3 | W | DUK [127:96] for HDCP2.2. |
| 0x01D<<2 | HDMITX_TOP_INFILTER | RW | DDC and CEC input glitch filter control. |
| 0x01E<<2 | HDMITX_TOP_NSEC_SCRATCH | RW | Scratch register for non-secure access. |
| 0x01F<<2 | HDMITX_TOP_SEC_SCRATCH | RW | Scratch register for secure access. |
| 0x020<<2 | HDMITX_TOP_EMP_CNTL0 | RW | EMP control. |
| 0x021<<2 | HDMITX_TOP_EMP_CNTL1 | RW | EMP control. |
| 0x022<<2 | HDMITX_TOP_EMP_MEMADDR_START | RW | Mem addr pointer for EMP. |
| 0x023<<2 | HDMITX_TOP_EMP_STAT0 | R | EMP status. |
| 0x024<<2 | HDMITX_TOP_EMP_STAT1 | R | EMP status. |
| 0x025<<2 | HDMITX_TOP_AXI_ASYNC_CNTL0 | RW | AXI async control. |
| 0x026<<2 | HDMITX_TOP_AXI_ASYNC_CNTL1 | RW | AXI async control. |
| 0x027<<2 | HDMITX_TOP_AXI_ASYNC_STAT0 | R | AXI async status. |
| 0x028<<2 | HDMITX_TOP_I2C_BUSY_CNT_MAX | RW | Max I2C idle time after I2C Start. |
| 0x029<<2 | HDMITX_TOP_I2C_BUSY_CNT_STAT | RW | I2C idle time status. |
| 0x02A<<2 | HDMITX_TOP_HDCP22_BSOD | RW | HDCP22 BSOD override control. |
| 0x02B<<2 | HDMITX_TOP_DDC_CNTL | RW | DDC pull down by SW. |
| 0x2000 | HDMITX_TOP_REVOCMEM_ADDR_S | RW | Map to third party's IP internal Revoc MEM start address. |
| 0x365E | HDMITX_TOP_REVOCMEM_ADDR_E | RW | Map to third party's IP internal Revoc MEM end address. |

HDMITX_TOP_SW_RESET

| Bit | R/W | Default | Description |
|-------|-----|---------|--|
| 31:8 | R | 0 | Reserved |
| 15:10 | RW | 0x3f | Reserved |
| 9 | RW | 0 | sw_reset_i2c: to reset DWC IP's I2C module. 0=Release from reset; 1=Apply reset. |

| Bit | R/W | Default | Description |
|-----|-----|---------|--|
| 8 | RW | 1 | sw_reset_axiarb: to reset AXI arbiter between HDCP22 and EMP. 0=Release from reset; 1=Apply reset. |
| 7 | RW | 1 | sw_reset_emp: to reset EMP block. 0=Release from reset; 1=Apply reset. |
| 6 | RW | 1 | sw_reset_filt: to reset DDC&CEC input glitch filter. 0=Release from reset; 1=Apply reset. |
| 5 | RW | 1 | sw_reset_hdcp22: to reset HDCP2.2 IP. 0=Release from reset; 1=Apply reset. |
| 4 | RW | 1 | sw_reset_phyif: to reset PHY interface. 0=Release from reset; 1=Apply reset. |
| 3 | RW | 1 | sw_reset_intr: to reset interrupt block. 0=Release from reset; 1=Apply reset. |
| 2 | RW | 1 | sw_reset_mem: to reset KSV/REVOC mem. 0=Release from reset; 1=Apply reset. |
| 1 | RW | 1 | sw_reset_rnd: to reset random number interface to HDCP. 0=Release from reset; 1=Apply reset. |
| 0 | RW | 1 | sw_reset_core: To reset TX Controller IP. 0=Release from reset; 1=Apply reset. |

HDMITX_TOP_CLK_CNTL

| Bit | R/W | Default | Description |
|-------|-----|---------|---|
| 31 | RW | 0 | free_clk_en: 0= Enable clock gating for power saving; 1= Disable clock gating, enable free-run clock. |
| 30:13 | RW | 0 | Reserved |
| 12 | RW | 0 | i2s_ws_inv: 1= Invert i2s_ws. |

| Bit | R/W | Default | Description |
|-----|-----|---------|--|
| 11 | RW | 0 | i2s_clk_inv: 1= Invert i2s_clk. |
| 10 | RW | 0 | spdif_clk_inv: 1= Invert spdif_clk. |
| 9 | RW | 0 | tmds_clk_inv: 1= Invert tmds_clk. |
| 8 | RW | 0 | pixel_clk_inv: 1= Invert pixel_clk. |
| 7 | RW | 0 | hdcp22_skpclk_en: 1= Enable skpclk to HTX_HDCP2.2 IP. |
| 6 | RW | 0 | hdcp22_esmclk_en: 1= Enable esmclk to HTX_HDCP2.2 IP. |
| 5 | RW | 0 | hdcp22_tmdsclk_en: 1= Enable tmds_clk to HDCP2.2 IP. |
| 4 | RW | 0 | Reserved. |
| 3 | RW | 0 | i2s_clk_en: 1= Enable i2s_clk. |
| 2 | RW | 0 | spdif_clk_en: 1= Enable spdif_clk. |
| 1 | RW | 0 | tmds_clk_en: 1= Enable tmds_clk. |
| 0 | RW | 0 | pixel_clk_en: 1= Enable pixel_clk. |

HDMITX_TOP_HPD_FILTER

| Bit | R/W | Default | Description |
|-------|-----|---------|---|
| 31:16 | R | 0 | Reserved |
| 31:28 | RW | 0 | rxsense_glitch_width: Filter out glitch \leq rxsense_glitch_width. |
| 27:16 | RW | 0 | rxsense_valid_width: Filter out width \leq rxsense_valid_width * 1024. |
| 15:12 | RW | 0 | hpd_glitch_width: Filter out glitch \leq hpd_glitch_width. |

| Bit | R/W | Default | Description |
|------|-----|---------|---|
| 11:0 | RW | 0 | hpd_valid_width: Filter out width \leq hpd_valid_width * 1024. |

HDMITX_TOP_INTR_MASKN

Interrupt MASKN, one bit per interrupt source.

0= Disable interrupt source;

1= Enable interrupt source.

| Bit | R/W | Default | Description |
|------|-----|---------|-----------------------------|
| 31:8 | R | 0 | Reserved |
| 7 | RW | 0 | rxsense_fall |
| 6 | RW | 0 | rxsense_rise |
| 5 | RW | 0 | err_i2c_timeout |
| 4 | RW | 0 | hdcp22_rndnum_err |
| 3 | RW | 0 | nonce_rfrsh_rise |
| 2 | RW | 0 | hpd_fall |
| 1 | RW | 0 | hpd_rise |
| 0 | RW | 0 | TX Controller IP interrupt. |

HDMITX_TOP_INTR_STAT

Interrupt status. For each bit of bit[4:0], write 1 to manually set the interrupt bit, read back the interrupt status.

| Bit | R/W | Default | Description |
|-------|-----|---------|---|
| 31 | R | 0 | Shadowing TX Controller IP interrupt status flag. |
| 30 | R | 0 | Shadowing HDCP2.2 IP interrupt status flag. |
| 29:58 | R | 0 | Reserved |
| 7 | RW | 0 | rxsense_fall |
| 6 | RW | 0 | rxsense_rise |
| 5 | RW | 0 | err_i2c_timeout |
| 4 | RW | 0 | hdcp22_rndnum_err |
| 3 | RW | 0 | nonce_rfrsh_rise |
| 2 | RW | 0 | hpd_fall |
| 1 | RW | 0 | hpd_rise |

| Bit | R/W | Default | Description |
|-----|-----|---------|-----------------------------|
| 0 | RW | 0 | TX Controller IP interrupt. |

HDMITX_TOP_INTR_STAT_CLR

Interrupt status clear. For each bit, write 1 to clear the interrupt bit.

| Bit | R/W | Default | Description |
|--------|-----|---------|-----------------------------|
| 31: 58 | R | 0 | Reserved |
| 7 | W | 0 | rxsense_fall |
| 6 | W | 0 | rxsense_rise |
| 5 | W | 0 | err_i2c_timeout |
| 4 | W | 0 | hdcp22_rndnum_err |
| 3 | W | 0 | nonce_frsh_rise |
| 2 | W | 0 | hpd_fall |
| 1 | W | 0 | hpd_rise |
| 0 | W | 0 | TX Controller IP interrupt. |

HDMITX_TOP_BIST_CNTL

| Bit | R/W | Default | Description |
|-------|-----|---------|--|
| 31:16 | R | 0 | Reserved |
| 15 | RW | 0 | Reserved |
| 14:12 | RW | 0 | tmnds_sel: 3'b000=Output zero; 3'b001=Output normal TMDS data; 3'b010=Output PRBS data; 3'b100=Output shift pattern. |
| 11: 9 | RW | 0 | shift_pttn_repeat: 0=New pattern every clk cycle; 1=New pattern every 2 clk cycles; ...; 7=New pattern every 8 clk cycles. |
| 8 | RW | 0 | shift_pttn_en: 1= Enable shift pattern generator; 0=Disable. |
| 7:5 | RW | 0 | Reserved |
| 4: 3 | RW | 0 | prbs_pttn_mode: |

| Bit | R/W | Default | Description |
|-----|-----|---------|---|
| | | | 0=PRBS11; 1=PRBS15; 2=PRBS7; 3=PRBS31. |
| 2:1 | RW | 0 | prbs_pttn_width: 0=Idle; 1=Output 8-bit pattern; 2=Output 1-bit pattern; 3=Output 10-bit pattern. |
| 0 | RW | 0 | prbs_pttn_en: 1=Enable PRBS generator; 0=Disable. |

HDMITX_TOP_SHIFT_PTTN_012

| Bit | R/W | Default | Description |
|-------|-----|---------|-------------------------|
| 31:30 | R | 0 | Reserved |
| 29:20 | RW | 0 | shift_pttn_data[59:50]. |
| 19:10 | RW | 0 | shift_pttn_data[69:60]. |
| 9:0 | RW | 0 | shift_pttn_data[79:70]. |

HDMITX_TOP_SHIFT_PTTN_345

| Bit | R/W | Default | Description |
|-------|-----|---------|-------------------------|
| 31:30 | R | 0 | Reserved |
| 29:20 | RW | 0 | shift_pttn_data[29:20]. |
| 19:10 | RW | 0 | shift_pttn_data[39:30]. |
| 9:0 | RW | 0 | shift_pttn_data[49:40]. |

HDMITX_TOP_SHIFT_PTTN_67

HDMITX_TOP_TMDS_CLK_PTTN_CNTL

| Bit | R/W | Default | Description |
|------|-----|---------|--|
| 31:2 | R | 0 | Reserved |
| 1 | RW | 0 | shift_tmds_clk_pttn: 1=Enable shifting clk pattern, used when TMDS CLK rate = TMDS character rate /4. |
| 0 | W | 0 | load_tmds_clk_pttn: Write this bit to 1 to load tmds_clk_pttn to HW. Always read back 0. |

HDMITX_TOP_REVOCMEM_STAT

| Bit | R/W | Default | Description |
|-------|-----|---------|---|
| 31:12 | R | 0 | Reserved |
| 1 | RW | 0 | revocmem_rd_fail: Read back 1 to indicate Host read REVOC MEM failure, Reading this register automatically clear the failure flag. |
| 0 | RW | 0 | revocmem_wr_fail: Read back 1 to indicate Host write REVOC MEM failure, Reading this register automatically clear the failure flag. |

HDMITX_TOP_STAT0

| Bit | R/W | Default | Description |
|--------|-----|---------|---|
| 31: 12 | R | 0 | Reserved |
| 1 | R | 0 | filtered RxSense status: 0= RxSense low; 1= RxSense high. |

| | | | |
|---|---|---|---|
| 0 | R | 0 | filtered HPD status: 0= HPD low; 1= HPD high. |
|---|---|---|---|

HDMITX_TOP_SKP_CNTL_STAT

| Bit | R/W | Default | Description |
|------|-----|---------|---|
| 31 | R | 0 | Status of nonce_vld signal. |
| 30:4 | R | 0 | Reserved |
| 3 | RW | 0 | rndnum_hdcp22: 0=Random number generator if enabled for hdcp1.4; 1= Random number generator if enabled for hdcp2.2. |
| 2 | RW | 0 | DUK_vld:Set to 1 once DUK is written. |
| 1 | RW | 0 | PKF_vld:Set to 1 once PKF is written. |
| 0 | RW | 0 | nonce_hw_en: 1=Use HW nonce; 0=Use SW nonce from reg HDMITX_TOP_NONCE_0/1/2/3. |

HDMITX_TOP_NONCE_0

| Bit | R/W | Default | Description |
|------|-----|---------|-------------|
| 31:0 | W | 0 | nonce[31:0] |

HDMITX_TOP_NONCE_1

| Bit | R/W | Default | Description |
|------|-----|---------|--------------|
| 31:0 | W | 0 | nonce[63:32] |

HDMITX_TOP_NONCE_2

| Bit | R/W | Default | Description |
|------|-----|---------|--------------|
| 31:0 | W | 0 | nonce[95:64] |

HDMITX_TOP_NONCE_3

| Bit | R/W | Default | Description |
|------|-----|---------|---------------|
| 31:0 | W | 0 | nonce[127:96] |

HDMITX_TOP_PKF_0

| Bit | R/W | Default | Description |
|------|-----|---------|-------------|
| 31:0 | W | 0 | PKF[31:0] |

HDMITX_TOP_PKF_1

| Bit | R/W | Default | Description |
|------|-----|---------|-------------|
| 31:0 | W | 0 | PKF[63:32] |

HDMITX_TOP_PKF_2

| Bit | R/W | Default | Description |
|------|-----|---------|-------------|
| 31:0 | W | 0 | PKF[95:64] |

HDMITX_TOP_PKF_3

| Bit | R/W | Default | Description |
|------|-----|---------|-------------|
| 31:0 | W | 0 | PKF[127:96] |

HDMITX_TOP_DUK_0

| Bit | R/W | Default | Description |
|------|-----|---------|-------------|
| 31:0 | W | 0 | DUK[31:0] |

HDMITX_TOP_DUK_1

| Bit | R/W | Default | Description |

| 31:0 | W | 0 | DUK[95:64] |

HDMITX_TOP_DUK_3

| Bit | R/W | Default | Description |
|------|-----|---------|-------------|
| 31:0 | W | 0 | DUK[127:96] |

HDMITX_TOP_INFILTER

| Bit | R/W | Default | Description |
|-------|-----|---------|---|
| 31:27 | RW | 0 | Reserved |
| 26:24 | RW | 0 | For DDC infilter: filter internal clock divider. 0=No divide; 1=Divide by 2; 2=Divide by 3; ... 7=Divide by 8. |

| | | | |
|-------|----|---|--|
| 23:16 | RW | 0 | For DDC infilter: sampling clock divider. 0=No divide; 1=Divide the filter sampling clock by 2; 2=Divide the filter sampling clock by 3; ... 255=Divide the filter sampling clock by 256; |
| 15:11 | RW | 0 | Reserved |

HDMITX_TOP_NSEC_SCRATCH

| Bit | R/W | Default | Description |
|------|-----|---------|---|
| 31:0 | RW | 0 | Scratch register that can be used for either secure or non-secure reg access. |

HDMITX_TOP_SEC_SCRATCH

| Bit | R/W | Default | Description |
|------|-----|---------|---|
| 31:0 | RW | 0 | Scratch register that can be used for secure reg access only. |

HDMITX_TOP_EMP_CNTL0

| Bit | R/W | Default | Description |
|-------|-----|---------|---|
| 31:16 | RW | 0 | Empacketsinframe. Number of EMPs to send for the next frame. |
| 15:8 | RW | 0 | Empstartlatency. Defines the number of lines to wait after End-Of-Field, to start sending EMP. |
| 0 | RW | 0 | emp_tx_en. 0=Disable Extended Metadata packet. 1=Enable Extended Metadata packet. |

HDMITX_TOP_EMP_CNTL1

| Bit | R/W | Default | Description |
|-------|-----|---------|--|
| 31:19 | R | 0 | Reserved. |
| 18:17 | RW | 0 | emp_endian[1:0]. Bit[0]: 1=EMP data are stored as little Endian in DDR per 64-bit. 0=Big endian. Bit[1]: 1=For each 128-bit, swap high 64-bit to low 64-bit, and low 64-bit to high 64-bit. 0=No swap. |

| | | | |
|------|----|-----|---|
| 16 | RW | 0 | <p>emp_autoclr_ar_pending.</p> <p>If at the start of DDR read request for the current frame, there is still outstanding requests remaining from the previous frame, this bit defines whether to auto-clear DDR request state machine.</p> <p>0=The current request will not start until the previous outstanding requests are cleared by normal operation.</p> <p>1=The state machine is reset and previous outstanding requests are cancelled. The current request starts immediately.</p> |
| 15:0 | RW | 128 | <p>emp_sampleline.</p> <p>All EMP control registers are buffered internally, at the time defined by this field – the number of lines after Vsync rise. Before this time the EMP control registers does not take effect.</p> |

HDMITX_TOP_EMP_MEMADDR_START

| Bit | R/W | Default | Description |
|------|-----|---------|---|
| 31:0 | RW | 0 | Start address of EMP memory pointer for next frame. |

HDMITX_TOP_EMP_STAT0

| Bit | R/W | Default | Description |
|-------|-----|---------|--|
| 31:30 | RW | 0 | <p>emp_err[1:0]. Error status of AXI activity. Write 1 to each bit to clear.</p> <p>Bit[0]: 1=AXI RID incorrect.</p> <p>Bit[1]: 1=AXI RRESP error.</p> |
| 29:27 | R | 0 | Reserved. |
| 26:24 | R | 0 | <p>emp_ar_state[2:0]: Status of DDR AXI Address Read state machine.</p> <p>0=IDLE;</p> <p>1=WAIT_FIFO_ROOM;</p> <p>2=WAIT_ARREADY;</p> <p>3=WAIT_PENDING;</p> <p>4=DONE.</p> |
| 23:17 | R | 0 | <p>emp_fifo_count[6:0].</p> <p>FIFO fill level for storing 128-bit DDR data, the result of reading EMP data from DDR.</p> |
| 16:0 | R | 0 | <p>emp_ar_pending.</p> <p>Number of DDR reads that are still outstanding, meaning request has been sent, but Data have yet to be received.</p> |

HDMITX_TOP_EMP_STAT1

| Bit | R/W | Default | Description |
|-------|-----|---------|--|
| 31:16 | R | 0 | empdone_cnt_buf [15:0]: Buffered number of EMP sent. |
| 15:0 | R | 0 | empdone_cnt[15:0]: Current number of EMP sent. |

HDMITX_TOP_AXI_ASYNC_CNTL0

| Bit | R/W | Default | Description |
|-------|-----|---------|--|
| 31:16 | R | 0 | Reserved. |
| 15:8 | RW | 128 | axi_async_waiting_limit[7:0]. |
| 7:5 | R | 0 | Reserved. |
| 4:3 | RW | 0 | axi_urgent[1:0]: DDR request urgent level. |
| 2 | RW | 0 | axi_async_disable_clk. 1=Disable clk to AXI-async module. 0=Enable clk. |
| 1 | RW | 1 | axi_async_auto_gclk_en. 1=Auto clk gate AXI-async module. 0=Free-run clk. |
| 0 | RW | 1 | axi_async_req_en. 1=Enable AXI async interface between EMP's trnds_clk domain to AXI's esm_clk domain. If need to sent EMP, this bit must be enabled. 0=Disable. |

HDMITX_TOP_AXI_ASYNC_CNTL1

| Bit | R/W | Default | Description |
|------|-----|--------------|---------------------|
| 31:0 | RW | 32'h18101810 | axi_async_hold_num. |

HDMITX_TOP_AXI_ASYNC_STAT0

| Bit | R/W | Default | Description |
|------|-----|---------|----------------------|
| 31:1 | R | 0 | Reserved. |
| 0 | RW | 1 | axi_async_chan_idle. |

HDMITX_TOP_I2C_BUSY_CNT_MAX

| Bit | R/W | Default | Description |
|------|-----|------------|---|
| 31:0 | RW | 0xffffffff | i2c_busy_cnt_max. After I2C Start bit, if I2C bus is static for more than i2c_busy_cnt_max number of cycles, an error interrupt will happen. |

HDMITX_TOP_I2C_BUSY_CNT_STAT

| Bit | R/W | Default | Description |
|------|-----|---------|---|
| 31:0 | R | 0 | i2c_busy_cnt. Reflect the number of idle cycles after the I2C Start bit, for the latest I2C transaction. |

HDMITX_TOP_HDCP22_BSOD

| Bit | R/W | Default | Description |
|-------|-----|----------|---|
| 31:26 | R | 0 | Reserved. |
| 25 | RW | 0 | hdcp22_no_bsod. 1=Do not use BSOD to override, no matter from FW or SW. 0=Use the BSOD, original behaviour. |
| 24 | RW | 0 | hdcp22_bsod_override. 1=Override BSOD value with hdcp_bsod_val. 0=Use the original BSOD value from ESM FW. |
| 23:0 | RW | 0x800080 | hdcp22_bsod_val. |

HDMITX_TOP_DDC_CNTL

| Bit | R/W | Default | Description |
|------|-----|---------|---|
| 31:2 | R | 0 | Reserved. |
| 1 | RW | 1 | DSDA pull down. 0=Pull down DSDA. 1=No pull down. |
| 0 | RW | 1 | DSCL pull down. 0=Pull down DSCL. 1=No pull down. |

Controller Register Updates

The following are the additional updates added to the original Controller. Please read the following in combination with the original databook of the Controller.

Note: DRM stands for Dynamic Range and Mastering InfoFrame.

Added a_hdcpcfg1 bit[5] and hdcp22reg_ctrl bit[7:6] to optional balance path delays between HDCP22 path, HDCP14 path and non-HDCP path.

Add EMP related register bits.

Add I2C reset.

ih_fc_stat2 0x102

| Bits | Name | Memory Access | Description |
|------|------|---------------|---|
| 3 | EMP | RW | Active after successful transmission of a total of N packets through DDR-EMP interface. N is programmed by HDMITX_TOP_EMP_CNTL0[31:16]. Value After Reset: 0 |
| 2 | DRM | RW | Active after successful transmission of an DRM InfoFrame packet. Value After Reset: 0 |

ih_mute_fc_stat2 0x182

| Bits | Name | MemoryAccess | Description |
|------|------|--------------|--|
| 3 | EMP | RW | When set to 1, mutes ih_fc_stat2[3]. Value After Reset: 1 |
| 2 | DRM | RW | When set to 1, mutes ih_fc_stat2[2]. Value After Reset: 1 |

fc_datauto3 0x10b7

| Bits | Name | MemoryAccess | Description |
|------|----------|--------------|--|
| 6 | DRM_auto | RW | Enables DRM packet insertion Value After Reset: 1 |

|------|--------------------|---------------|--|
| 7 | hdcp_byp_delmacth | RW | 1=Match path delays between HDCP path and non-HDCP path. 0=Original IP behaviour. Value After Reset: 0 |
| 6 | hdcp22_14_delmacth | RW | 1=Match path delays between HDCP22 path and HDCP14 path. 0=Original IP behaviour. Value After Reset: 0 |

hdcp22reg_sts 0x7908

| Bits | Name | Memory Access | Description |
|------|----------------------|---------------|---|
| 7 | Hdcp22_capable | R | 1=HDCP22 capable. Value After Reset: 0 |
| 6 | hdcp22_auth_lost | R | 1=HDCP22 authentication lost. Value After Reset: 0 |
| 5 | hdcp22_authenticated | R | 1=HDCP22 authenticated. Value After Reset: 0 |
| 4 | hdcp22_auth_fail | R | 1=HDCP22 authentication failed. Value After Reset: 0 |

i2cm_softrstz 0x7e09

| Bits | Name | Memory Access | Description |
|------|---------------------|---------------|--|
| 1 | softrst_idle_cnt_en | RW | Active by writing a zero and auto cleared to one in the following cycle. Do this to re-enable IDLE counter again. The counter maybe frozen due to some mis-operation from RX on the I2C bus. Value After Reset: 1 |

10.2.3.45 MIPI_DSI(base:32'hFF644000)

Each register final address = BASE + address * 4

MIPI_DSI_PHY_CTRL[31:0] 0x00

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R/W | 0 | soft reset for the phy. 1 = reset. 0 = dessert the reset. |
| 30 | R/W | 0 | clock lane soft reset. |

| | | | |
|----|-----|---|--|
| 29 | R/W | 0 | data byte lane 3 soft reset. |
| 28 | R/W | 0 | data byte lane 2 soft reset. |
| 27 | R/W | 0 | data byte lane 1 soft reset. |
| 26 | R/W | 0 | data byte lane 0 soft reset. |
| 5 | R/W | 0 | LPDT data endian. 1 = transfer the high bit first. 0 : transfer the low bit first. |
| 4 | R/W | 0 | HS data endian. |
| 3 | R/W | 0 | force data byte lane in stop mode. |
| 2 | R/W | 0 | force data byte lane 0 in reciever mode. |
| 1 | R/W | 0 | write 1 to sync the txclkesc input. the internal logic have to use txclkesc to decide Txvalid and Txready. |
| 0 | R/W | 0 | enalbe the MIPI DSI PHY TxDDRCIk. |

MIPI_DSI_PHY_CTRL[31:0] 0x01

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R/W | 0 | clk lane tx_hs_en control selection. 1 = from register. 0 use clk lane state machine. |
| 30 | R/W | 0 | register bit for clock lane tx_hs_en. |
| 29 | R/W | 0 | clk lane tx_lp_en contrl selection. 1 = from register. 0 from clk lane state machine. |
| 28 | R/W | 0 | register bit for clock lane tx_lp_en. |
| 27 | R/W | 0 | chan0 tx_hs_en control selection. 1 = from register. 0 from chan0 state machine. |
| 26 | R/W | 0 | register bit for chan0 tx_hs_en. |
| 25 | R/W | 0 | chan0 tx_lp_en control selection. 1 = from register. 0 from chan0 state machine. |
| 24 | R/W | 0 | register bit from chan0 tx_lp_en. |
| 23 | R/W | 0 | chan0 rx_lp_en control selection. 1 = from register. 0 from chan0 state machine. |
| 22 | R/W | 0 | register bit from chan0 rx_lp_en. |
| 21 | R/W | 0 | chan0 contention detection enable control selection. 1 = from register. 0 from chan0 state machine. |
| 20 | R/W | 0 | register bit from chan0 contention dectection enable. |
| 19 | R/W | 0 | chan1 tx_hs_en control selection. 1 = from register. 0 from chan0 state machine. |
| 18 | R/W | 0 | register bit for chan1 tx_hs_en. |
| 17 | R/W | 0 | chan1 tx_lp_en control selection. 1 = from register. 0 from chan0 state machine. |
| 16 | R/W | 0 | register bit from chan1 tx_lp_en. |
| 15 | R/W | 0 | chan2 tx_hs_en control selection. 1 = from register. 0 from chan0 state machine. |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 14 | R/W | 0 | register bit for chan2 tx_hs_en. |
| 13 | R/W | 0 | chan2 tx_lp_en control selection. 1 = from register. 0 from chan0 state machine. |
| 12 | R/W | 0 | register bit from chan2 tx_lp_en. |
| 11 | R/W | 0 | chan3 tx_hs_en control selection. 1 = from register. 0 from chan0 state machine. |
| 10 | R/W | 0 | register bit for chan3 tx_hs_en. |
| 9 | R/W | 0 | chan3 tx_lp_en control selection. 1 = from register. 0 from chan0 state machine. |
| 8 | R/W | 0 | register bit from chan3 tx_lp_en. |
| 4 | R/W | 0 | clk chan power down. this bit is also used as the power down of the whole MIPI_DSI_PHY. |
| 3 | R/W | 0 | chan3 power down. |
| 2 | R/W | 0 | chan2 power down. |
| 1 | R/W | 0 | chan1 power down. |
| 0 | R/W | 0 | chan0 power down. |

MIPI_DSI_CHAN_STS [31:0] 0x02

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 24 | R/W | 0 | chan0 TX->RX turn can't accept the ACK command from slave watch dog triggered. write 1 to clear the status bit. |
| 23 | R/W | 0 | chan0 RX ESC command watch dog triggered. write 1 to clean this bit. |

MIPI_DSI_CLK_TIM [31:0] 0x03

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------|
| 31:24 | R/W | 0 | TCLK_PREPARE. |
| 23:16 | R/W | 0 | TCLK_ZERO. |
| 15:8 | R/W | 0 | TCLK_POST. |
| 7:0 | R/W | 0 | TCLK_TRAIL. |

MIPI_DSI_HS_TIM [31:0] 0x04

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------|
| 31:24 | R/W | 0 | THS_PREPARE. |
| 23:16 | R/W | 0 | THS_ZERO. |
| 15:8 | R/W | 0 | THS_TRAIL. |
| 7:0 | R/W | 0 | THS_EXIT. |

MIPI_DSI_LP_TIM [31:0] 0x05

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31:24 | R/W | 0 | tTA_GET. |
| 23:16 | R/W | 0 | tTA_GO. |
| 15:8 | R/W | 0 | tTA_SURE. |
| 7:0 | R/W | 0 | tLPX. |

MIPI_DSI_ANA_UP_TIM [31:0] 0x06

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------------------|
| 31:0 | R/W | 0 | wait time to MIPI DIS analog ready. |

MIPI_DSI_INIT_TIM [31:0] 0x07

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31:0 | R/W | 0 | TINIT |

MIPI_DSI_WAKEUP_TIM [31:0] 0x08

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31:0 | R/W | 0 | TWAKEUP |

MIPI_DSI_LPOK_TIM [31:0] 0x09

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | R/W | 0 | when in RxULPS state, RX reciever is in sleep mode. every MIPI_DSI_ULPS_CHECK period, the reciever would be enabled once, and waiting this timer period to get the stable input. |

MIPI_DSI_LP_WCHDOG [31:0] 0x0A

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | R/W | 0 | watch dog timer for MIPI DSI LP receive state |

11. Audio Path

A311D integrates 3 TDM input/output interface, 1 SPDIF input, 2 SPDIF output interface, 1 PDM interface upto 8 channels, 3 TODDR (FIFO) for transfer input data to DDR, 1 TOSRAM for transfer input data to M4 MEM, 3 FRDDR (FIFO) for transfer data from DDR to output, 1 TDM LB & Loopback for AEC, 1 HW resample for clock synchronization, 1 power detect for voice wake up, and 1 clock locker detect difference of two clock. Below is the diagram for A311D audio path.

Figure 11-1 Diagram of Audio Path

11.1 Audio Input

11.1.1 Overview

This section describes TDM input interface, SPDIF input interface and PDM input interface..

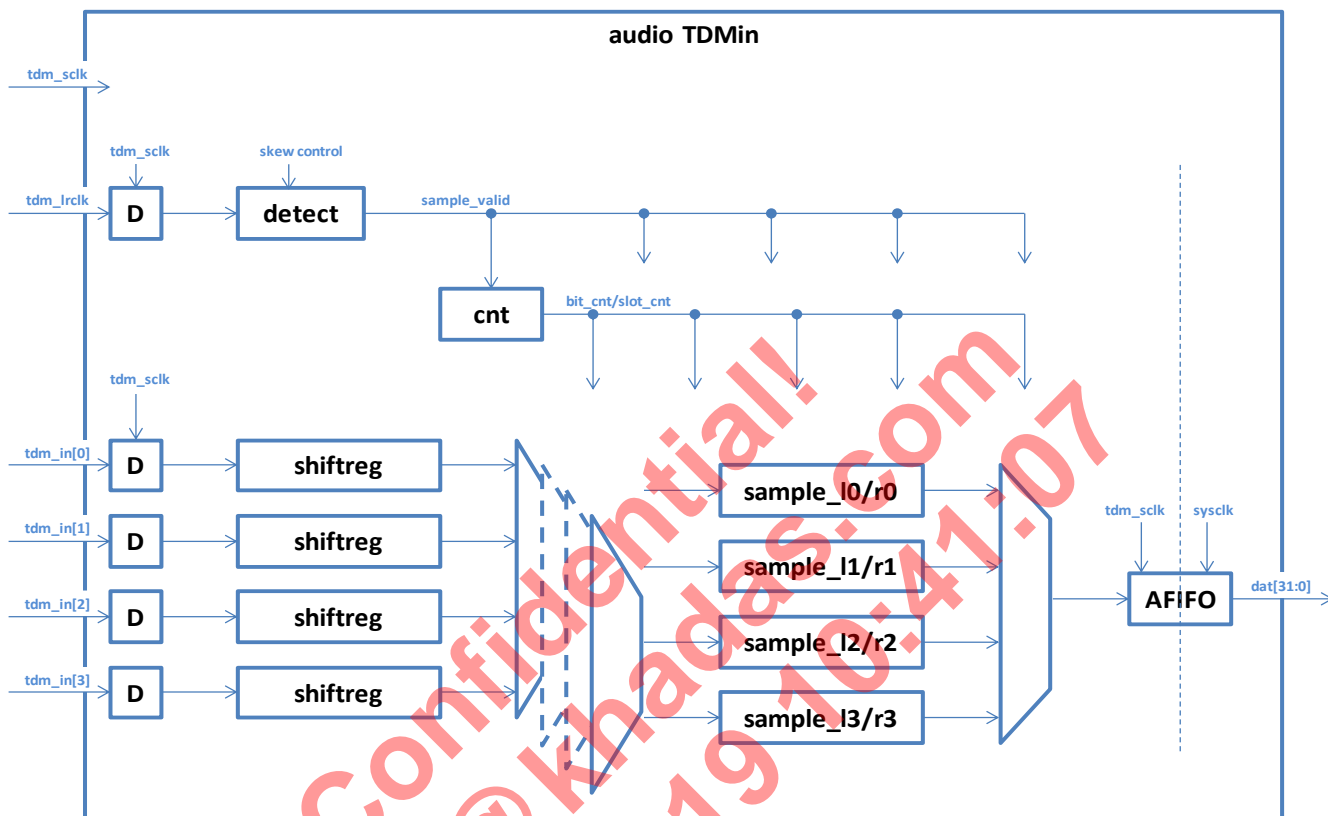

11.1.2 TDM Input Interface

TDM input interface works in the following way:

1. All worked at tdm_sclk before AFIFO,
2. Output is worked at sysclk;
3. Add skew control between lrclock and data;
4. Detect rise or fall edge of lrclock and clear bit_cnt/slot_cnt;

5. Store 4 data in to 4 shift register (max 32bits) ;
6. Swap 4 shift register to 8 sample data;
7. Send 8 sample data out in serials by mask/mute configure;
8. Below is the diagram of TDM input interface.

Figure 11-2 Diagram of SPIDF

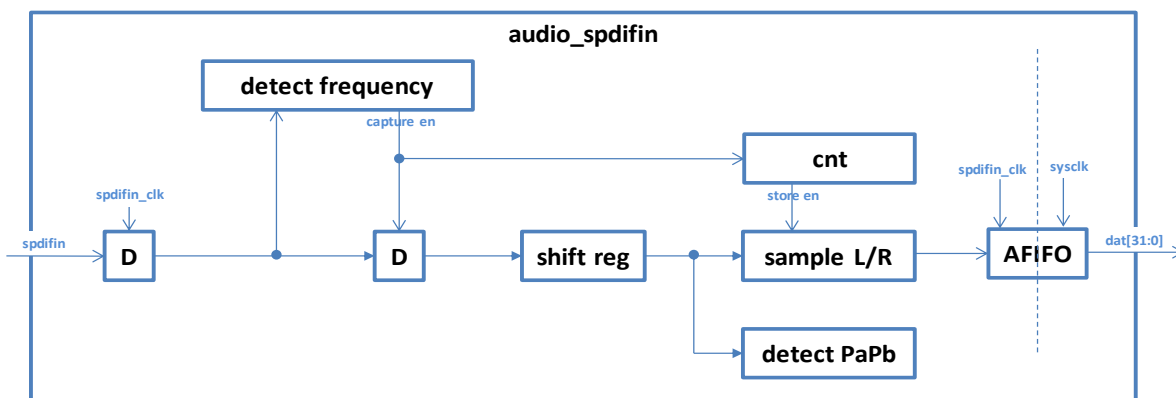

11.1.3 SPDIF Interface

SPDIF input interface works in the following way:

1. All worked at spdifin_clk before AFIFO;
2. After AFIFO worked at sysclk;
3. Detect frequency by rise or fall edge;
4. Capture data to shift reg;
5. Store data to sample L channel or R channel;
6. Detect PaPb if it's IEC60937;

Below is the diagram of SPDIF input interface.

Figure 11-3 SPDIF Input Interface

11.1.4 PDM

PDM input Decimation Filter is a highly programmable multistage decimation filter. It supports 4 inputs or 8 channel PDM digital microphone interface. Each channel contains one 9 stage CIC filter, 3 low power filters and a high pass filter. The PDM input bit rate is calculate with $fs \cdot OSR$. OSR can be 64, 128, 192 or 256.

CIC filter may have 3 to 9 CIC stages and the downsample rate also can be programable. There is a multiplier and shifter to adjust the result to match the accuracy and CIC bit width.

There are 3 low pass filters which shared a 336x24 Coefficient memory and a 336x28 data memory. That means these 3 filters can be configed upto 336 taps together. The coefficient memory need to be programmed through APB bus. For example, if the filter 1 contains 140 taps, filter2 contains 32 taps, filter 3 contain 146 steps, the filter 1 coefficient will use 0~139 of the coefficient memory address; the filter 2 coefficient will use 140~171 of coefficient memory address and the filter 3 coefficient will use 172~317 of the coefficient memory address. The fillter stage controller will based on the downsample rate, filter taps and the rounding mode of each filter to arrange the filter.

The final high pass filter is used to filter the DC curent.

Figure 11-4 PDM Decimation Filter

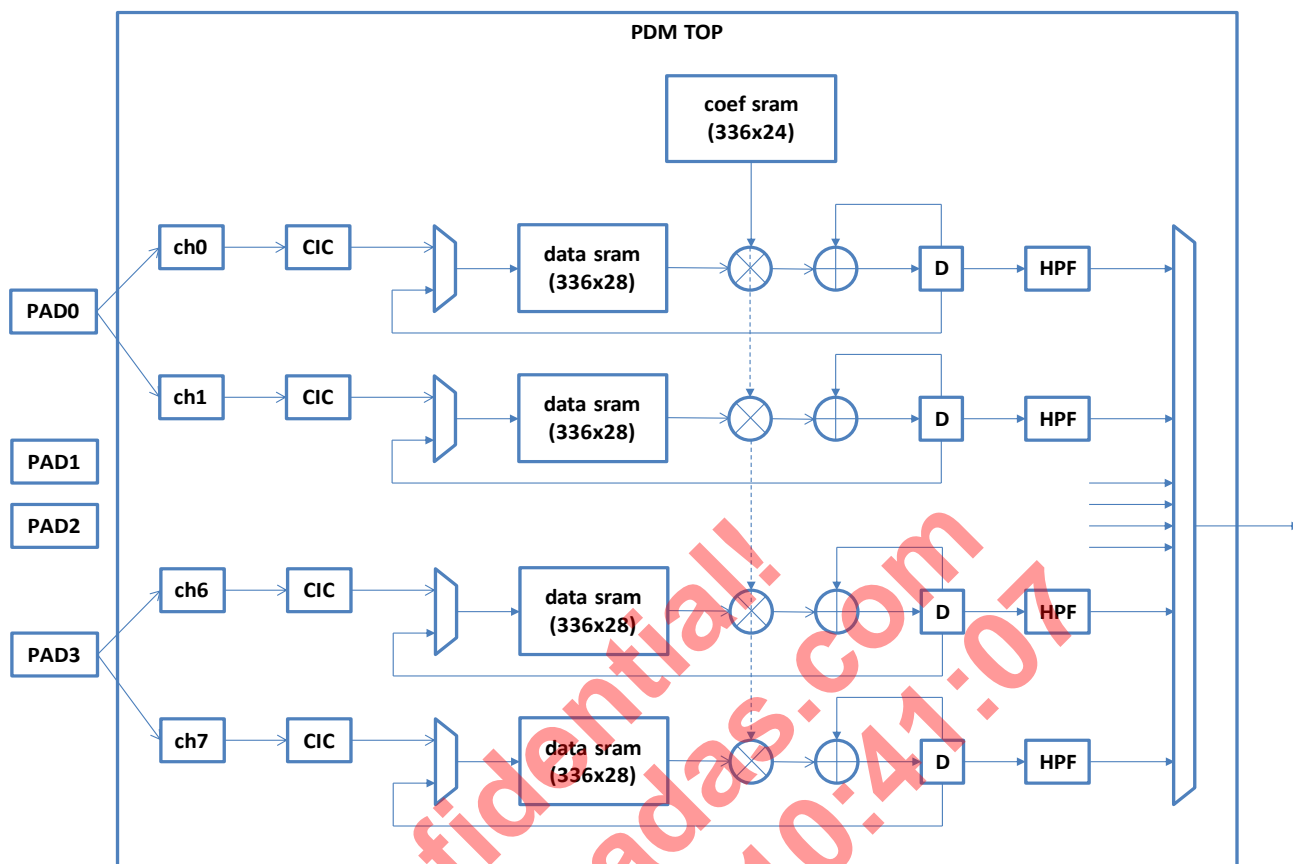

Figure 11-5 PDM Structure

11.2 Audio Output

11.2.1 Overview

This part describes TDM output interface, SPDIF output interface and audioreq_frddr submodule.

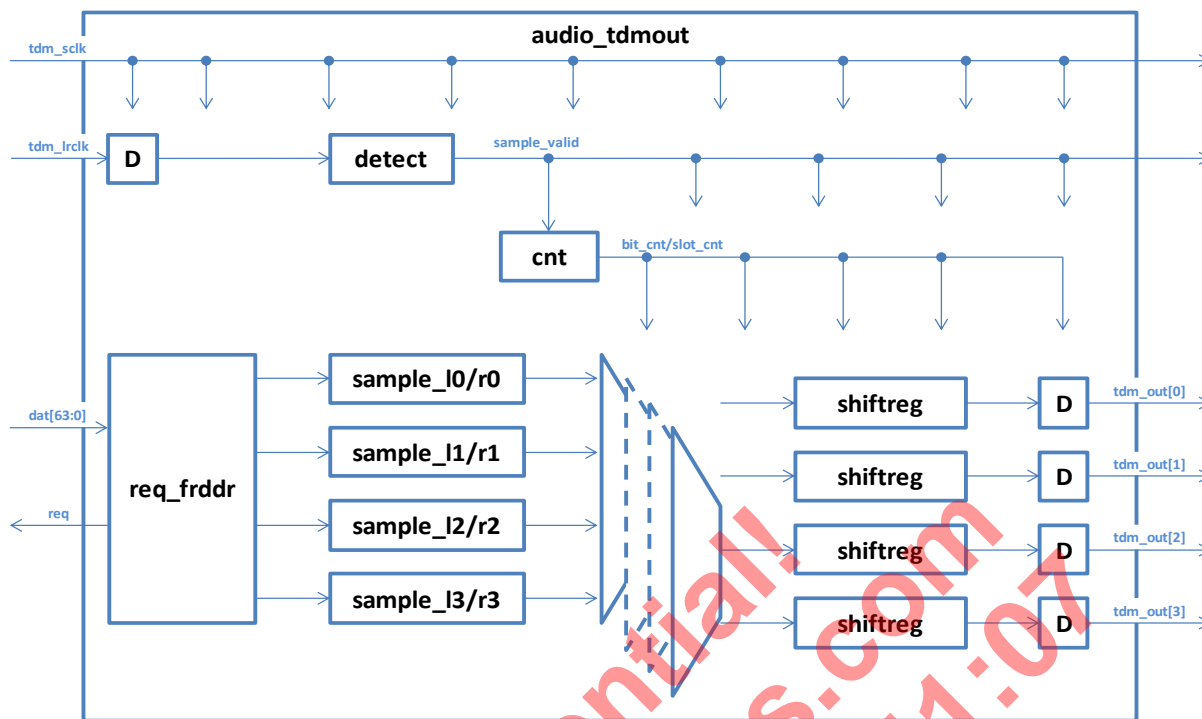

11.2.2 TDM Output Interface

TDM output interface works in the following way:

1. All worked at tdm_sclk;
2. Detect sample valid by tdm_lrclk rise edge and clear bit_cnt/slot_cnt;
3. Request data from FRDDR and store to 8 sample register;
4. Swap 8 sample register;
5. Shift send out data;

Below is the diagram of TDM output interface.

Figure 11-6 TDM Output Interface

11.2.3 SPDIF Output Interface

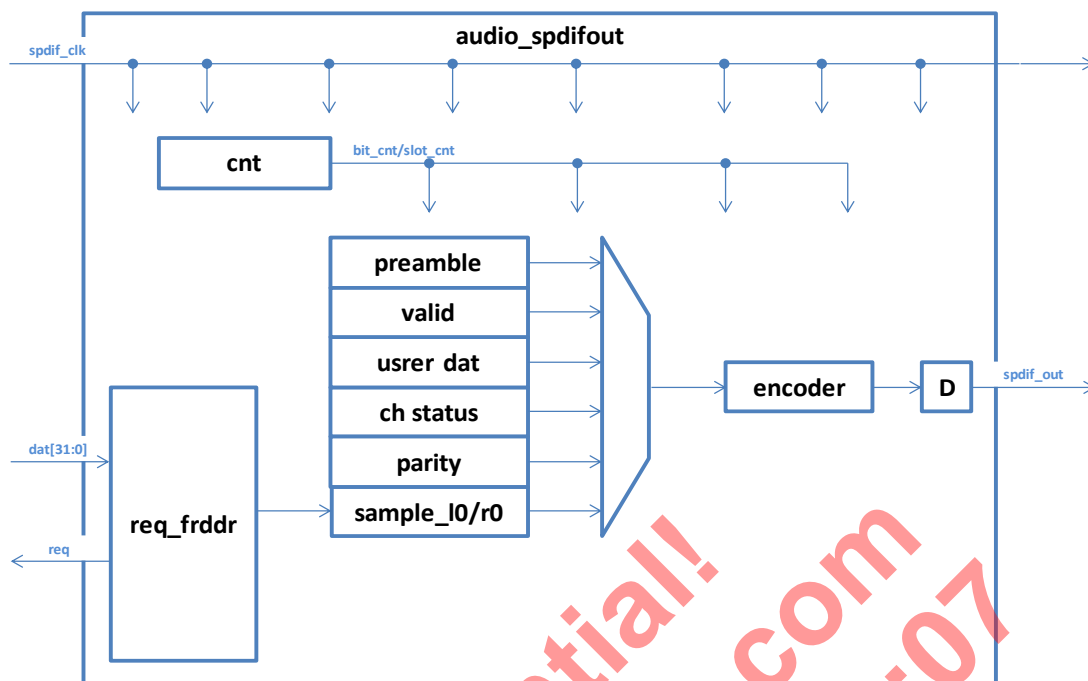

The SPDIF output interface works in the following way:

1. All worked at `spdifout` clk;
2. Request data from FRDDR and store to sample L0/R0;
3. Select data by `bit_cnt/slot_cnt` and send out;

Below is the diagram of SPDIF output interface.

 2021-10-19 10:41:07

Figure 11-7 SPDIF Output Interface

The SPDIF(encode) add same source select.The SPDIF out can be the same with i2s0/1/2/3,and can select before or after eq/drc.

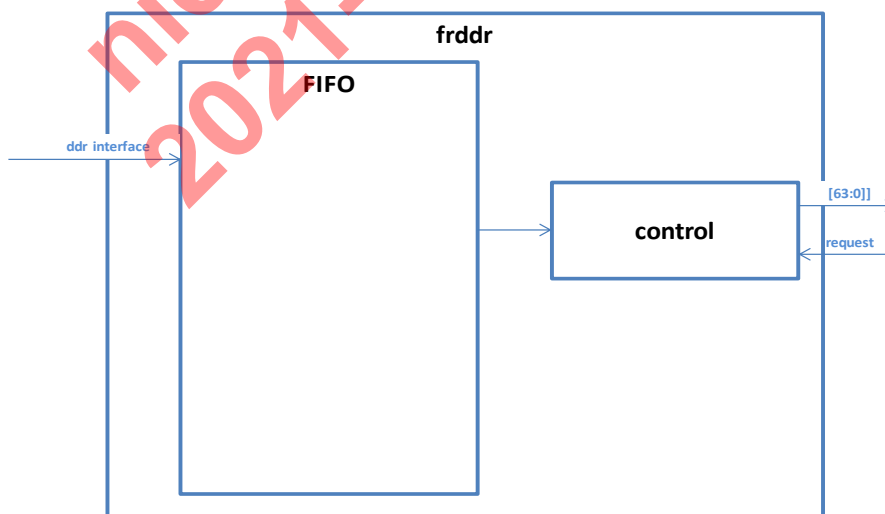

11.2.4 Audioreq_FRDDR

Audioreq_Frddr transfers data from sys clock to out clock and change format in the following way;

1. Wait for OUT enable and FRDDR initial done;
2. Request first time and fill 8 sample;
3. When received update data , it will send request to FRDDR and update 8 sample;

Below is a diagram of Audioreq_Frddr

Figure 11-8 Audioreq_Frddr

11.3 DDR Datapath

11.3.1 Overview

This part describes the datapath between audio module and DDR.

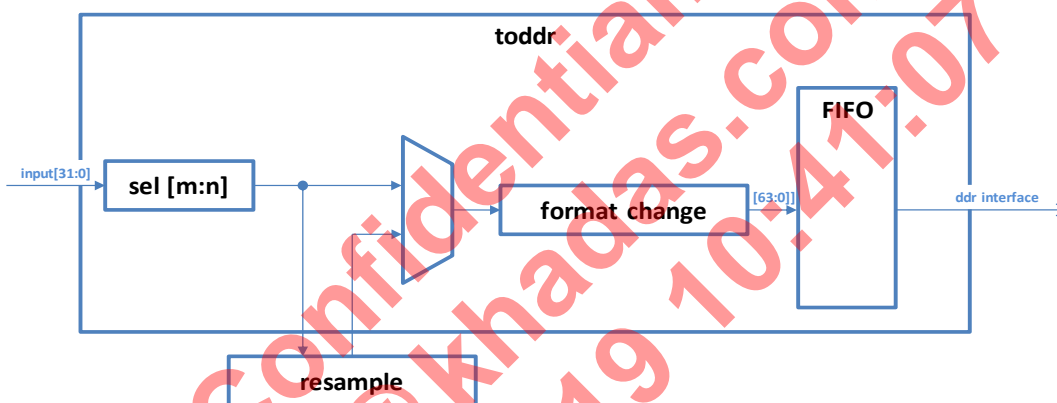

11.3.2 Audio TODDR

A311D has 3 TODDR(FIFO), TODDR_A's FIFO depth is 256x64; B/C are 128x64. TODDR module works in the following way:

1. All worked at sysclk;
2. Resample if need;
3. Change format and package to 64 bits data by configure;
4. Write to fifo;
5. Read data from fifo and send to DDR automatically by configure;

Below is the Diagram of Audio TODDR.

Figure 11-9 Audio TODDR

11.3.3 Audio FRDDR

A311D has 3 FRDDR(FIFO), FRDDR_A's FIFO depth is 256x64, B/C are 128x64;

1. All worked at sysclk;
2. When enable FRDDR, it will fill FIFO from DDR first;
3. When FRDDR receive request, it will read data from fifo and send out;
4. FRDDR will fill FIFO automatically by configure;

Below is the Diagram of Audio FRDDR.

Figure 11-10 Audio FRDDR

11.4 Audio TORAM

TORAM is similar as TODDR, just use RAM interface.

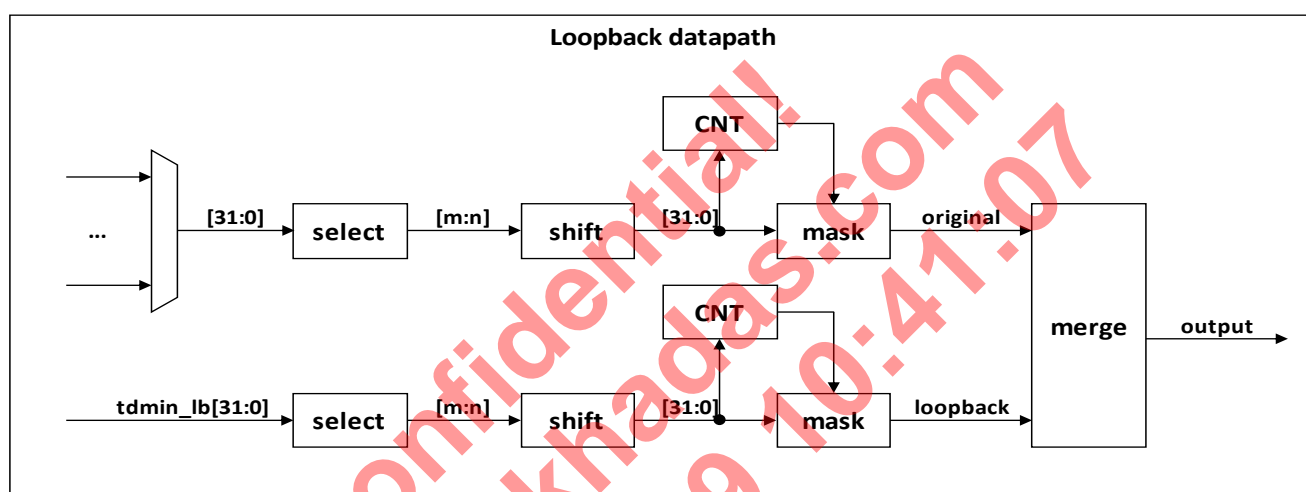

11.5 Audio Loopback

TDMIN_LB can receive one TDMOUT or TDMIN, it can merger with one TDMIN/SPDIFIN/PDMIN in the following way:

1. Store one source to temp register;
2. When another source arrived, send out direct;
3. When finished, send out temp register;

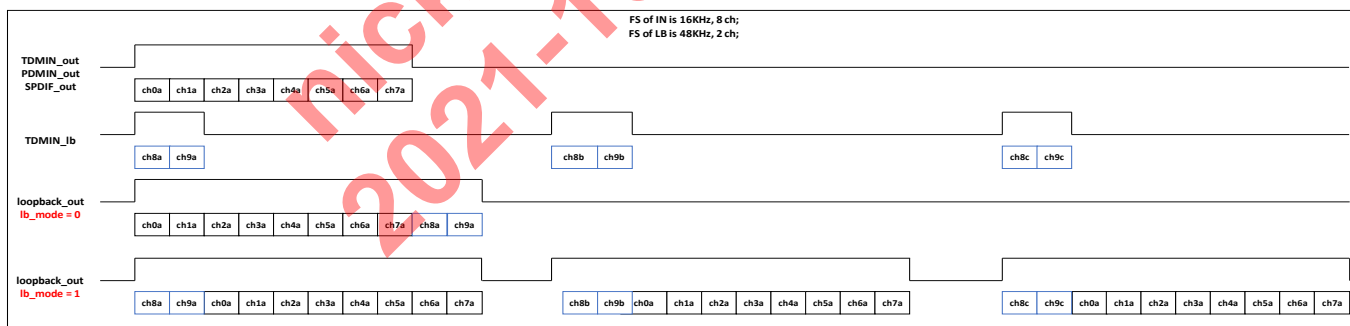

Below is the diagram of audio loopback datapath.

Figure 11-11 Audio Loopback Data Path

Audio loopback wave form are shown below.

Figure 11-12 Audio Loopback Wave Form

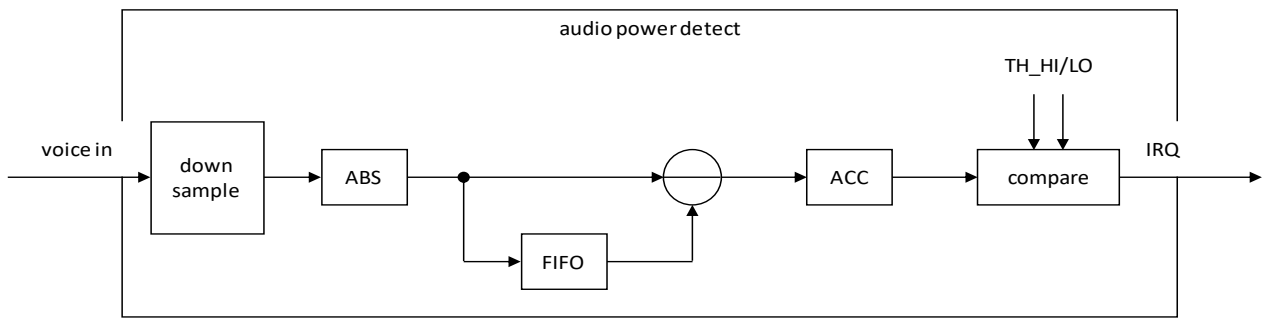

11.6 Audio Power Detect

Audio Power Detect submodule calculate a window of voice and compares it to TH_HI/LO. It generates IRQ when status changes.

Below is the diagram of audio power detect data path.

Figure 11-13 Audio Power Detect Data Path

Audio power detect wave form is shown below:

Figure 11-14 Audio Power Detect Wave Form

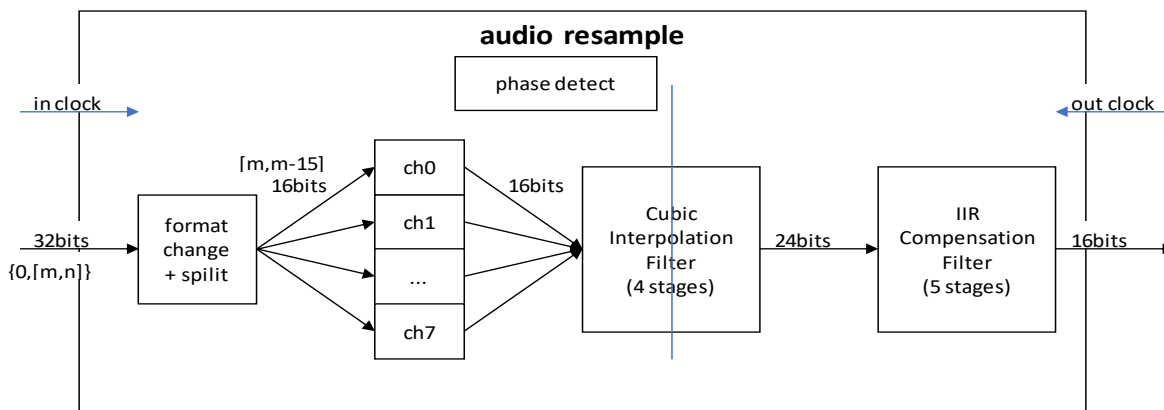

11.7 Audio Resample

Audio resample changes data from one symbol rate to another symbol rate in the following step:

1. Input is from Toddr and selected by toddr's m/n register;
2. ExampleA: `toddr_m = 27`, `toddr_n=4`, `resample_in[31:0] = {8'd0, toddr_in[27:4]}`;
3. Cut or extend input from 32bits to 16bits;
4. By exampleA, set `resample_M = 23`, then `filter_in = toddr_in[27:12]`;
5. Split to each channel (max is 8ch);
6. Interpolation by a cubic filter;
7. Use an IIR filter compensate;

Figure 11-15 Audio Resample

In the diagram, the module phase_det is used to calculate the interpolation phase, the module interp is used to implement the interpolation processing. There are two method which be implemented to calculate the interpolation phase. One is front feedback method, the other is accumulation method. They can be switched by register.

method 0

The method 0 is the direct feedback method. According the out_valid, it interpolates the mapping sample. The operation flow is given below:

Step 1: calculate the input data rate(average the count every input valid signal). For hdmi_rx audio data, the input rate is basically even.

Count the clock number in T1,T2, and so on. get CNT then do average:

$$T = 0.999 * T + 0.001 * CNT$$

For 8 channels signal, the CNT should be count between 8 in_valid signal.

Step 2: in the output clock domain, generate the output valid signal. Because the output clock should be integral times of output frequency, the valid signal can easily generated by counting the output clock. Then change the valid signal to main clock domain.

Step 3: calculate the interpolation phase mu.

Count the clock number in t1 get cnt, then mu can be calculated:

$$\mu = \text{cnt}/T$$

The bit width of μ is 9 bits.

Step 4: do the interpolation(4 points cubic interpolation)

Basic function is:

$Y = ((a*\mu + b)*\mu + c)*\mu + d$, which μ is interpolation phase.

and

$$a = 16*x_0 - 48*x_1 + 48*x_2 - 16*x_3$$

$$b = 31*x_0 - 31*x_1 - 31*x_2 + 31*x_3$$

$$c = 23*x_0 + 59*x_1 - 59*x_2 - 23*x_3$$

$$d = 6*x_0 + 58*x_1 + 58*x_2 + 6*x_3$$

Which x_0, x_1, x_2, x_3 is the delay line of input data.

Performance analysis:

The advantage of this method is that the output data rate is generated by output clock and match the acquirement of software absolutely.

The disadvantage is that the interpolation phase has bias. The bias relies on the main clock. More higher the main clock frequency is, more precise the interpolation result is.

Actually the precision of interpolation phase is 9 bits, so the frequency of main clock should be more than 512 times of input data rate.

method 1

The method 1 is accumulation method. It assume the output frequency is accurate and stable. It sets a fixed phase step. The phase step is the ratio of the input frequency to output frequency. Every step, It outputs a sample. About the bias of input frequency, there is a register to report the statistics value. It can be used to adjust the initial phase step by firmware.

Performance analysis:

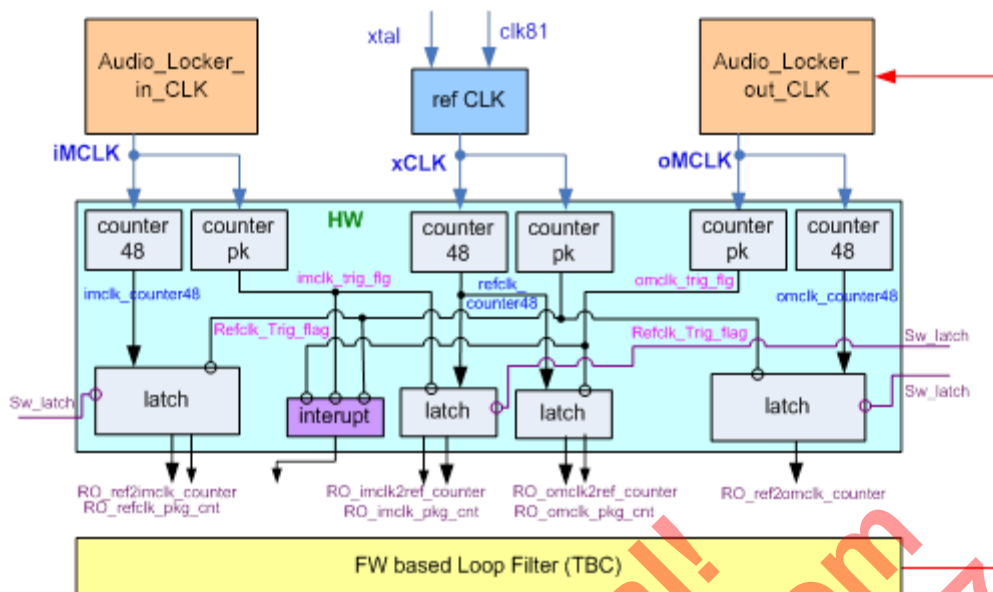

This method requires the audio output frequency precision, because there is no information statistics of output frequency. When the audio output frequency is not stable, it is recommended it not be used.

11.8 Audio Locker

The audio input clock and output clock are in different power domain and may have little difference, the difference leads to FIFO problem, A311D use Audio Locker module to fix this problem, the basic method is to measure the difference between different clock and adjust(software dynamically) the clock frequency to make them match.

Below show the diagram of Audio Locker module.

Figure 11-16 Audio Locker Diagram

11.9 RegisterDescription

11.9.1 PDM Registers

Base Address: 0xFF640000

Each register final address = module base address+ address * 4

PDM_CTRL 0x00

| Bits | R/W | Default | Description |
|-------|-----|------------|--|
| 31 | R/W | 0x00000000 | PDM enable |
| 30 | R/W | | invert the PDM_DCLK |
| 29 | R/W | | output mode: 1: 24bits. 0: 32 bits |
| 28 | R/W | | bypass mode. 1: bypass all filter. directly output the PDM input to DDR. 0: normal mode. |
| 27:20 | R/W | | pdm_mute_mask[7:0]; [7] mute pdm ch7; ... [0] mute pdm ch0; |
| 17 | R/W | | chnum_en. 1: start send ch_cnt out. |
| 16 | R/W | | PDM Asynchronous FIFO soft reset. write 1 to soft reset AFIFO |
| 15:8 | R/W | | PDM channel reset. 0: to reset each PDM channel. 1: normal mode |
| 7:0 | R/W | | PDM channel enable. each bit for one channel |

PDM_HCIC_CTRL1 0x01

| Bits | R/W | Default | Description |
|------|-----|---------|-------------|
|------|-----|---------|-------------|

| | | | |
|-------|-----|------------|---|
| 31 | R/W | 0x00000000 | hcic filter enable. 1 use sinc filter. 0 bypass input to output |
| 29:24 | R/W | | hcic final gain shift parameter |
| 23:16 | R/W | | hcic final gain multiplier |
| 8:4 | R/W | | hcic down sample rate |
| 3:0 | R/W | | hcic stage number. must be between 3 to 9 |

PDM_HCIC_CTRL2 0x02**PDM_F1_CTRL 0x03**

| Bits | R/W | Default | Description |
|-------|-----|------------|--|
| 31 | R/W | 0x00000000 | filter 1 enable |
| 17:16 | R/W | | f1 round mode. 2'b00 : sign bit at bit 49. 28bits output [49:22] round at bit 21. 32bits output [49:18]. 24bits output [49:26] 2'b01 : sign bit at bit 50. 28bits output [50:23] round at bit 22. 32bits output [49:18]. 24bits output [49:26] 2'b10 : sign bit at bit 51. 28bits output [51:24] round at bit 23 32bits output [49:18]. 24bits output [49:26]. |
| 15:12 | R/W | | filter 1 down sample rate |
| 8:0 | R/W | | filter 1 stage number |

PDM_F2_CTRL 0x04

| Bits | R/W | Default | Description |
|-------|-----|------------|--|
| 31 | R/W | 0x00000000 | filter 2 enable |
| 17:16 | R/W | | F2 round mode. 2'b00 : round at bit 21. 2'b01 : round at bit 22. 2'b10 : round at bit 23 |
| 15:12 | R/W | | filter 2 down sample rate |
| 8:0 | R/W | | filter 2 stage number |

PDM_F3_CTRL 0x05

| Bits | R/W | Default | Description |
|-------|-----|------------|--|
| 31 | R/W | 0x00000000 | filter 3 enable |
| 17:16 | R/W | | F3 round mode. 2'b00 : round at bit 21. 2'b01 : round at bit 22. 2'b10 : round at bit 23 |
| 15:12 | R/W | | filter 3 down sample rate |
| 8:0 | R/W | | filter 3 stage number |

PDM_HPF_CTRL 0x06

| Bits | R/W | Default | Description |
|-------|-----|------------|--|
| 31 | R/W | 0x00000000 | High pass filter enable |
| 20:16 | R/W | | high pass filter shift steps. 6~19 steps |

| | | | |
|------|-----|--|--------------------------------|
| 15:0 | R/W | | high pass filter output factor |
|------|-----|--|--------------------------------|

PDM_CHAN_CTRL 0x07

| Bits | R/W | Default | Description |
|-------|-----|------------|---|
| 31:24 | R/W | 0x00000000 | Chan3 data sample pointer vs edge of the PDM_DCLK |
| 23:16 | R/W | | Chan2 data sample pointer vs edge of the PDM_DCLK |
| 15:8 | R/W | | Chan1 data sample pointer vs edge of the PDM_DCLK |
| 7:0 | R/W | | Chan0 data sample pointer vs edge of the PDM_DCLK |

PDM_CHAN_CTRL1 0x08

| Bits | R/W | Default | Description |
|-------|-----|------------|---|
| 31:24 | R/W | 0x00000000 | Chan7 data sample pointer vs edge of the PDM_DCLK |
| 23:16 | R/W | | Chan6 data sample pointer vs edge of the PDM_DCLK |
| 15:8 | R/W | | Chan5 data sample pointer vs edge of the PDM_DCLK |
| 7:0 | R/W | | Chan4 data sample pointer vs edge of the PDM_DCLK |

PDM_COEFF_ADDR 0x09

| Bits | R/W | Default | Description |
|------|-----|------------|---|
| 8:0 | R/W | 0x00000000 | address of the write/read of coeff data |

PDM_COEFF_DATA 0x0A

| Bits | R/W | Default | Description |
|------|-----|------------|---------------------------------|
| 31:0 | R/W | 0x00000000 | write/read data to coeff memory |

PDM_CLKG_CTRL 0x0B

| Bits | R/W | Default | Description |
|------|-----|------------|---|
| 6 | R/W | 0x00000000 | filt_ctrl module auto clock gating control |
| 5 | R/W | | sinc_fifo module auto clock gating control |
| 4 | R/W | | filter module auto clock gating control |
| 3 | R/W | | apb module auto clock gating control |
| 2 | R/W | | coeff memory module auto clock gating control |
| 1 | R/W | | each channel module auto clock gating control |
| 0 | R/W | | cts_pdm_clk auto clock gating control |

PDM_STS 0x0C

| Bits | R/W | Default | Description |
|------|-----|------------|---|
| 1 | R/W | 0x00000000 | HPF filter output overflow. means the PCLK is too slow |
| 0 | R/W | | HCIC filter output overflow. means the CTS_PDM_CLK is too slow. can't finished the filter function. |

PDM_MUTE_VALUE 0x0D

| Bits | R/W | Default | Description |
|------|-----|------------|------------------------------|
| 31:0 | R/W | 0x00000000 | mute value if mute_mask = 1; |

11.9.2 CLK Registers

The register signal are connected in the following way, the *_slv_sclk_* signal are connected to only a,b, c from core pinmux, *_slv_sclk-_d is connected to wifi_beacon signal; only slv_lrclk_a, b, c are connected, slv_lrclk_d is not connected, as shown in the following table:

Table 11-1 Audio Clock Signal Connection

| Register Signal | Connected Signal |
|-----------------|------------------|
| i_slv_sclk_a | TDMA_SLV_SCLK |
| i_slv_sclk_b | TDMB_SLV_SCLK |
| i_slv_sclk_c | TDMC_SLV_SCLK |
| i_slv_sclk_d | wifi_beacon |
| i_slv_lrclk_a | TDMA_SLV_FS |
| i_slv_lrclk_b | TDMB_SLV_FS |
| i_slv_lrclk_c | TDMC_SLV_FS |
| i_slv_lrclk_d | - |

For Below registers:

Base Address: 0xFF642000

Each register final address = module base address+ address * 4

EE_AUDIO_CLK_GATE_EN 0x00

| Bits | R/W | Default | Description |
|------|-----|------------|-------------------------------------|
| 22 | R/W | 0x00000000 | eqdrc, 0:disable; 1: enable; |
| 21 | R/W | 0x00000000 | spdifoutB, 0:disable; 1: enable; |
| 20 | R/W | 0x00000000 | toram, 0:disable; 1: enable; |
| 19 | R/W | 0x00000000 | power detect, 0:disable; 1: enable; |
| 18 | R/W | | resample, 0:disable; 1: enable; |

| Bits | R/W | Default | Description |
|------|-----|---------|---------------------------------|
| 17 | R/W | | spdifout, 0:disable; 1: enable; |
| 16 | R/W | | spdifin, 0:disable; 1: enable; |
| 15 | R/W | | loopback, 0:disable; 1: enable; |
| 14 | R/W | | toddr, 0:disable; 1: enable; |
| 13 | R/W | | toddrb, 0:disable; 1: enable; |
| 12 | R/W | | toddra, 0:disable; 1: enable; |
| 11 | R/W | | frddrc, 0:disable; 1: enable; |
| 10 | R/W | | frddrb, 0:disable; 1: enable; |
| 9 | R/W | | frddra, 0:disable; 1: enable; |
| 8 | R/W | | tdmoutc, 0:disable; 1: enable; |
| 7 | R/W | | tdmoutb, 0:disable; 1: enable; |
| 6 | R/W | | tmdouta, 0:disable; 1: enable; |
| 5 | R/W | | tdminlb, 0:disable; 1: enable; |
| 4 | R/W | | tdminc, 0:disable; 1: enable; |
| 3 | R/W | | tdminb, 0:disable; 1: enable; |
| 2 | R/W | | tdmina, 0:disable; 1: enable; |

| 26:24 | R/W | | clk_sel, 0:mp0_pll; 1:mp1_pll; 2:mp2_pll; 3:mp3_pll; 4:hifi_pll; 5:fclk_div3(666M); 6:fclk_div4(500M); 7:gp0_pll; |
| 15:0 | R/W | | the frequency of pdm_sysclk = pll/clk_div; |

EE_AUDIO_CLK_SPDIFOUT_B_CTRL 0x2d

| Bits | R/W | Default | Description |
|-------|-----|------------|--|
| 31 | R/W | 0x00000000 | clk_en, 0:disable; 1: enable; |
| 30 | R/W | | Force_oscin, 0:disable; 1: force clock source as oscin(24M); |
| 26:24 | R/W | | clk_sel, 0:mp0_pll; 1:mp1_pll; 2:mp2_pll; 3:mp3_pll; 4:hifi_pll; 5:fclk_div3(666M); 6:fclk_div4(500M); 7:gp0_pll; |
| 9:0 | R/W | | clk_div, the frequency of mclk = pll/clk_div; |

11.9.3 TODDR Registers

EE_AUDIO_TODDR_A_CTRL0 0x40

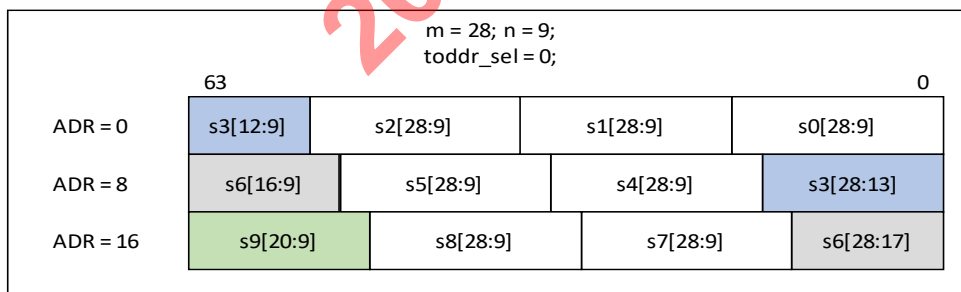

| Bits | R/W | Default | Description |
|-------|-----|------------|--|
| 31 | R/W | 0x00000000 | reg_toddr_en, 0: disable; 1: enable; |
| 30 | R/W | | reg_sel_resample, 0: select original data; 1: select reample data; |
| 29 | R/W | | reg_ext_signed, 0: extend bits as "0"; 1: extend bits as "msb"; |
| 28 | R/W | | reg_toddr_pp_mode, 0: select write to only one buff (start_addr,finish_addr); 1: select write to two buff (start_addr,finish_addr) (start_addrb, finish_addrb); |
| 27 | R/W | | Enable_sync_chnum; 1: start store data when first ch ; |
| 26:24 | R/W | | reg_toddr_endian |
| 23:16 | R/W | | reg_toddr_int_en [23] : reserved; [22] : reserved; |

| Bits | R/W | Default | Description |
|-------|-----|---------|--|
| | | | [21] : fifo overflow, write when fifocnt = depth; [20] : fifo overflow, read when fifocnt = 0; [19] : when write to ddr "int_addr" data (only once); [18] : when write to ddr "int_addr" data (repeat); [17] : when write to ddr address match "int_addr"; [16] : when write to ddr address match "finish_addr"; |
| 15:13 | R/W | | reg_toddr_sel, 0: combined data[m:n] without gap; like S0[m:n],S1[m:n],S2[m:n],... 1: combined data[m:n] as 16bits; like {S0[11:0],4'd0},{S1[11:0],4'd0}... 2: combined data[m:n] as 16bits; like {4'd0,S0[11:0]},{4'd0,{S1[11:0]}... 3: combined data[m:n] as 32bits; like {S0[27:4],8'd0},{S1[27:4],8'd0}... 4: combined data[m:n] as 32bits; like {8'd0,S0[27:4]},{8'd0,{S1[27:4]}... |
| 12:8 | R/W | | reg_toddr_m_sel, the msb position in data |
| 7:3 | R/W | | reg_toddr_n_sel, the lsb position in data |
| 2:0 | R/W | | reg_toddr_src_sel, [7]: loopback; [6]: tadmin_lb; [5]: reserved; [4]: padmin; [3]: spdifin; [2]: tadmin_c; [1]: tadmin_b; [0]: tadmin_a; |

We can change format before write to DDR:

For example:

| | | | | |
|---------------------------------|--------------|--------------|--------------|--------------|
| m = 8; n = 1; toddr_sel = 1; | | | | |
| | 63 | | | 0 |
| ADR = 0 | s3[8:1],8'd0 | s2[8:1],8'd0 | s1[8:1],8'd0 | s0[8:1],8'd0 |
| ADR = 8 | s7[8:1],8'd0 | s6[8:1],8'd0 | s5[8:1],8'd0 | s4[8:1],8'd0 |

| | | | | |
|-----------------------------------|----------------|----------------|----------------|----------------|
| m = 22; n = 12; toddr_sel = 2; | | | | |
| | 63 | | | 0 |
| ADR = 0 | 5'd0,s3[22:12] | 5'd0,s2[22:12] | 5'd0,s1[22:12] | 5'd0,s0[22:12] |
| ADR = 8 | 5'd0,s7[22:12] | 5'd0,s6[22:12] | 5'd0,s5[22:12] | 5'd0,s4[22:12] |

| | | | | |
|----------------------------------|----------------|--|----------------|---|
| m = 18; n = 4; toddr_sel = 3; | | | | |
| | 63 | | | 0 |
| ADR = 0 | s1[18:4],17'd0 | | s0[18:4],17'd0 | |
| ADR = 8 | s3[18:4],17'd0 | | s2[18:4],17'd0 | |

| | | | | |
|----------------------------------|----------------|--|----------------|---|
| m = 11; n = 3; toddr_sel = 4; | | | | |
| | 63 | | | 0 |
| ADR = 0 | 23'd0,s1[11:3] | | 23'd0,s0[11:3] | |
| ADR = 8 | 23'd0,s3[11:3] | | 23'd0,s2[11:3] | |

EE_AUDIO_TODDR_A_CTRL1 0x41

| Bits | R/W | Default | Description |
|-------|-----|------------|--|
| 25 | R/W | 0x00000000 | force_finish; the value from 0-> 1: force finish by current address and jump to start_address; |
| 24 | R/W | | Insert_chnum; 0: disable; 1: insert chnum[9:0] to data[9:0] |
| 23:16 | R/W | | reg_fifo_start_rd_th, each time, when fifo_cnt greater than this register, control will start read data from fifo and write to DDR; write length is "reg_fifo_start_rd_th + 1" * 8bytes; |
| 11:8 | R/W | | reg_status_sel, control status2 source; |

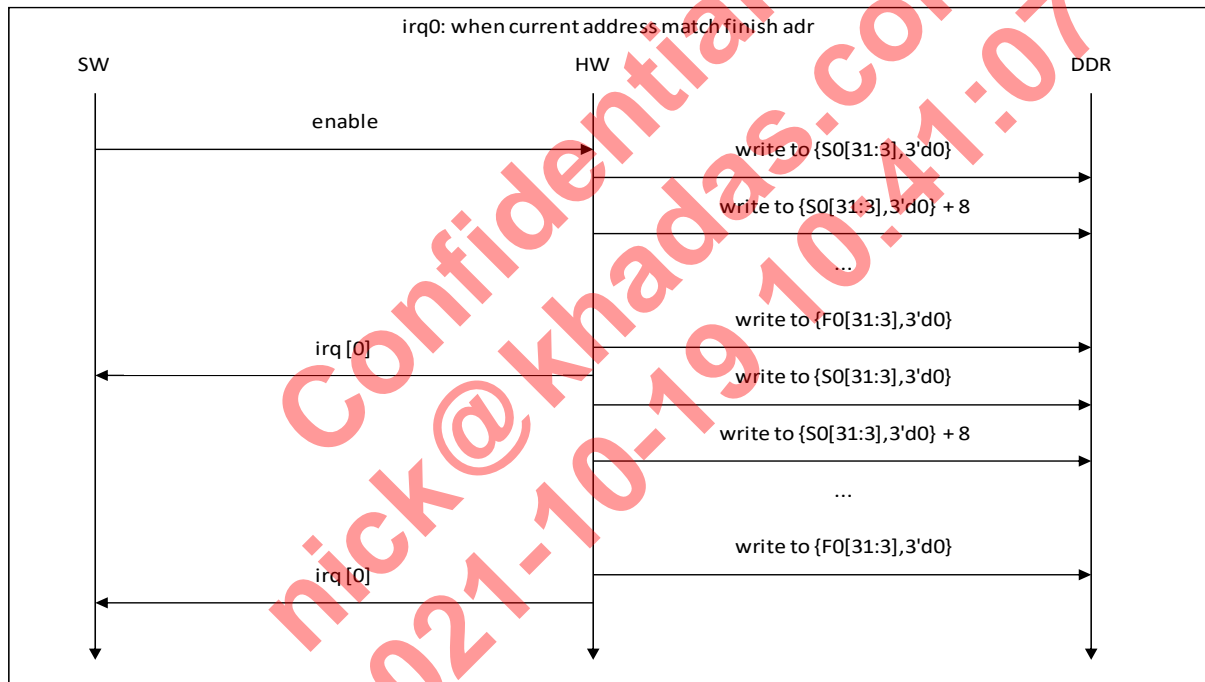

| Bits | R/W | Default | Description |
|------|-----|---------|---|
| 16:8 | R/W | | fifo count, the num in fifo |
| 7:0 | R/W | | int_status, when irq generate, related bit will changed to 1 and can only clear by reg_int_status_clr |

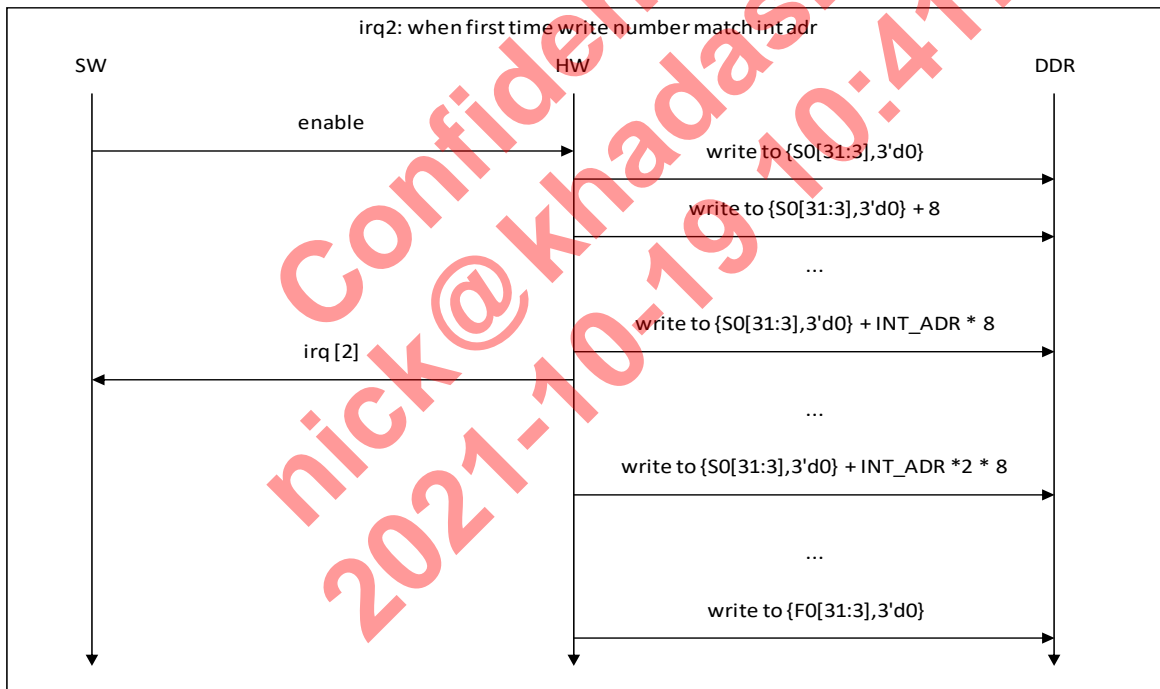

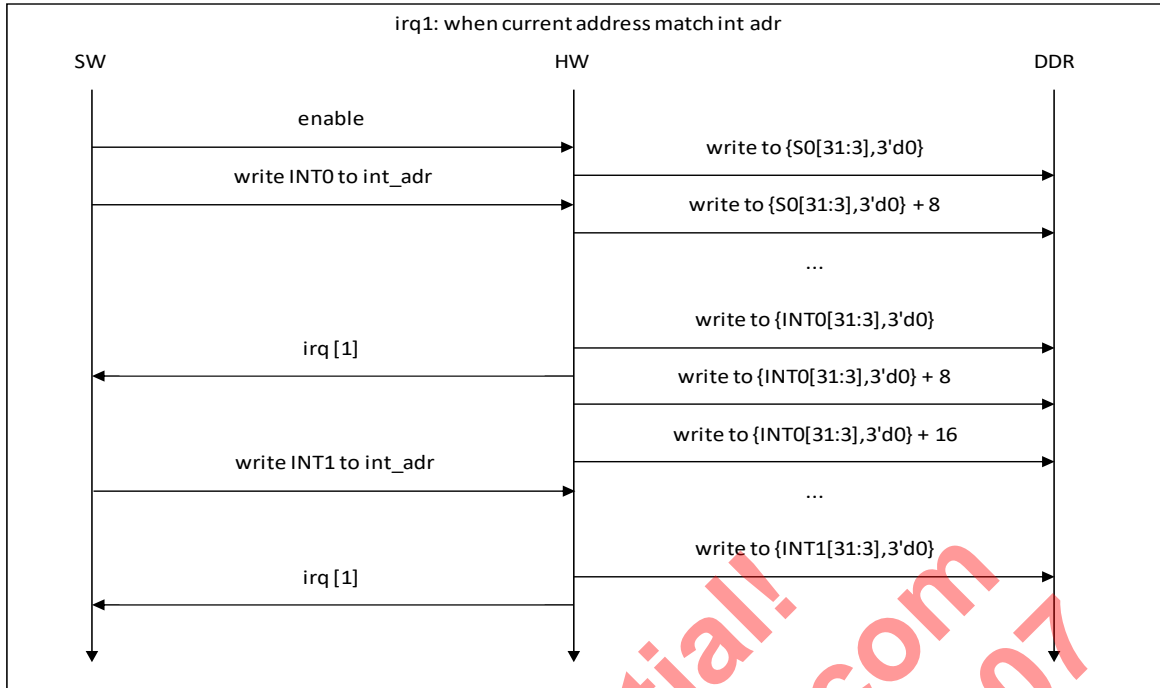

EE_AUDIO_TODDR_A_STATUS2 0x46

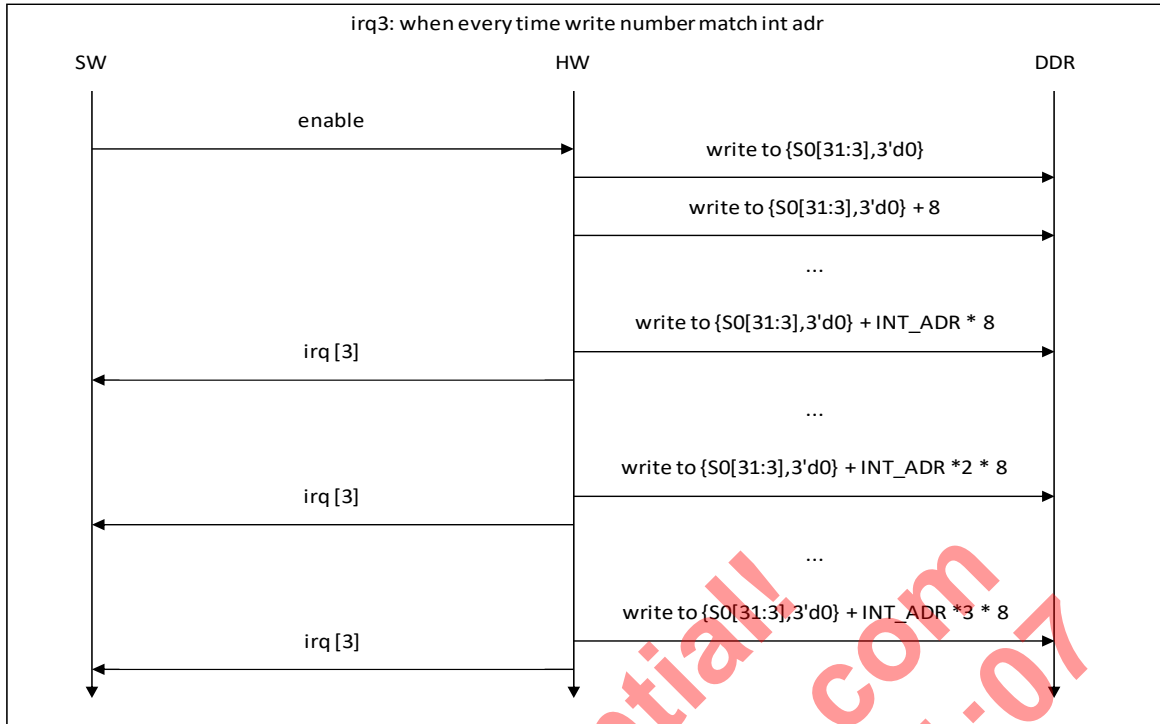

| Bits | R/W | Default | Description |
|------|-----|------------|---|
| 31:0 | R/W | 0x00000000 | status2, by reg_status_sel: 0: current ddr write address; 1: next finish address; 2: count by ddr reply, current ddr write address; 3: count by ddr reply, next finish address; |

We can generate 8 irq and add them together to CPU.

Then can read int_status to know it's which irq:

EE_AUDIO_TODDR_A_START_ADDRB 0x47

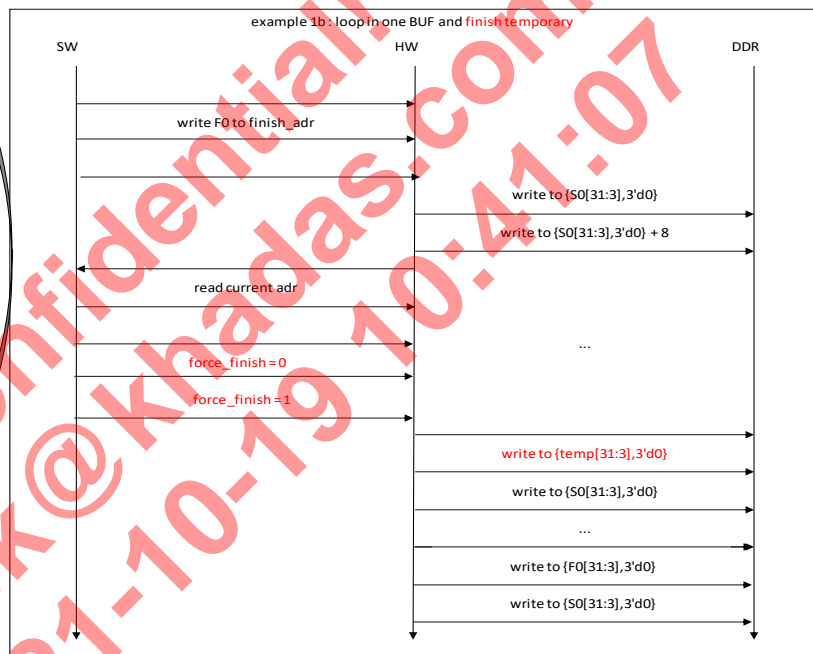

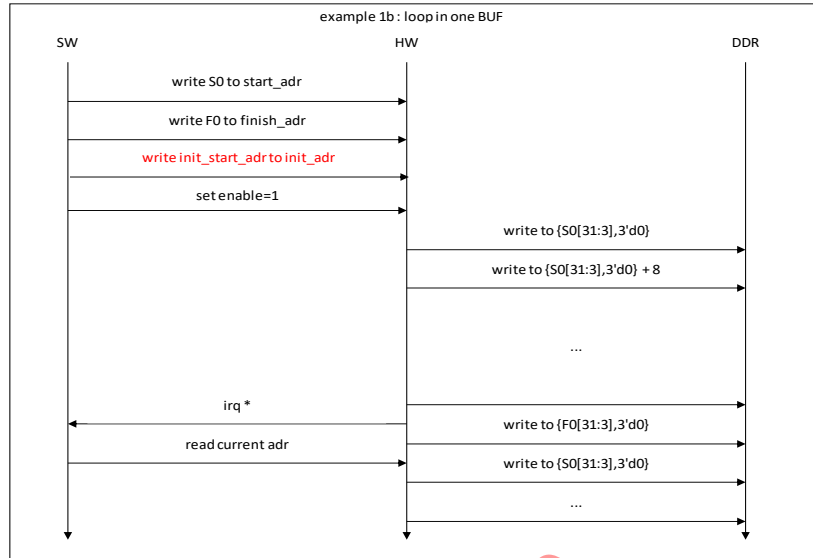

| Bits | R/W | Default | Description |
|------|-----|------------|--|
| 31:0 | R/W | 0x00000000 | istart_addrb, buff_B start address, ignore [2:0] |

EE_AUDIO_TODDR_A_FINISH_ADDRB 0x48

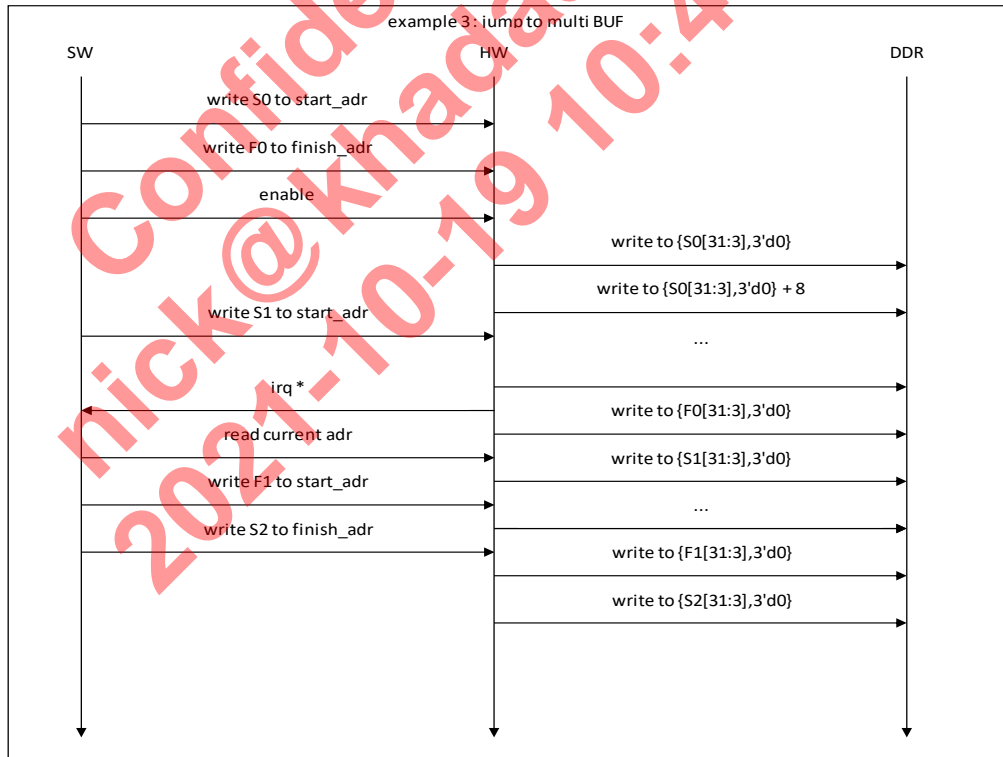

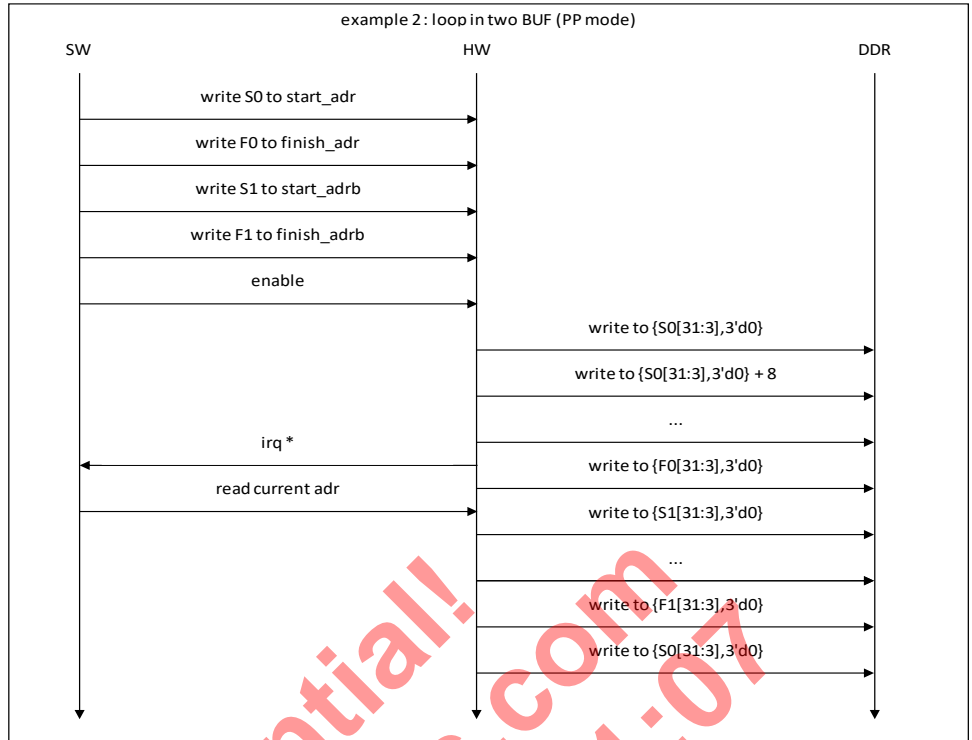

| Bits | R/W | Default | Description |
|------|-----|------------|---|
| 31:0 | R/W | 0x00000000 | finish_addrb, buff_B finish address, ignore [2:0] |

EE_AUDIO_TODDR_A_INIT_ADDR 0x49

| Bits | R/W | Default | Description |
|------|-----|------------|---|
| 31:0 | R/W | 0x00000000 | initial address, the first ddr address after enable |

| 3 | R/W | | Reg_frddr_src_sel1_en; 0: ignorereq_src_sel1; 1: waitreq_src_sel1; |
| 2:0 | R/W | | reg_frddr_src_sel1, 0: tdmout_a; 1: tdmout_b; 2: tdmout_c; 3: spdifout; 4: spdifout_b; 5: reserved; 6: reserved; 7: reserved; |

EE_AUDIO_FRDDR_A_CTRL1 0x71

| Bits | R/W | Default | Description |
|-------|-----|------------|--|
| 31:24 | R/W | 0x00000000 | reg_fifo_depth, the max depth of fifo; for high bit rates like 384k*32bits*8ch, set this register higher; for low bit rates like 48k*32bits*2ch, set this register lower; |
| 23:16 | | | reg_fifo_start_wr_th, when the fifo cnt less than "reg_fifo_depth - reg_fifo_start_wr_th", start requeest and read data from DDR; each time request "reg_fifo_start_wr_th" * 8 bytes data; |
| 12 | | | force finish; when the value changed from 0 to 1; will finished by current address and jump to start address; |
| 11:8 | | | reg_status_sel, control status2 source; |
| 7:0 | | | reg_int_status_clr, clear each bits of int_status register |

EE_AUDIO_FRDDR_A_START_ADDR 0x72

| Bits | R/W | Default | Description |
|------|-----|------------|----------------------------------|
| 31:0 | R/W | 0x00000000 | start_addr, buff_B start address |

EE_AUDIO_FRDDR_A_FINISH_ADDR 0x73

| Bits | R/W | Default | Description |
|------|-----|------------|------------------------------------|
| 31:0 | R/W | 0x00000000 | finish_addr, buff_B finish address |

EE_AUDIO_FRDDR_A_INT_ADDR 0x74

| Bits | R/W | Default | Description |
|------|-----|------------|---|
| 31:0 | R/W | 0x00000000 | int_addr, usage A : as an address of interrupt; usage B : as a count of interrupt; |

EE_AUDIO_FRDDR_A_STATUS1 0x75

| Bits | R/W | Default | Description |
|------|-----|------------|-----------------------------|
| 19 | R/W | 0x00000000 | r_selb_true |
| 18 | R/W | | r_selb |
| 17:8 | R/W | | fifo count, the num in fifo |

| | | | |
|-----|-----|--|---|
| 7:0 | R/W | | int_status, when irq generate, related bit will changed to 1 and can only clear by reg_int_status_clr |
|-----|-----|--|---|

EE_AUDIO_FRDDR_A_STATUS2 0x76

| Bits | R/W | Default | Description |
|------|-----|------------|---|
| 31:0 | R/W | 0x00000000 | status2, by reg_status_sel: 0: current ddr write address; 1: next finish address; 2: count by ddr reply, current ddr write address; 3: count by ddr reply, next finish address; |

The same design as TODDR:

We can generate 8 irq and add them together to CPU.

Then can read int_status to know it's which irq.

EE_AUDIO_FRDDR_A_START_ADDRB 0x77**EE_AUDIO_FRDDR_A_FINISH_ADDRB 0x78**

The same design as TODDR:

We have an internal register to store reg_start_adr and reg_finish_adr.

We call them as r_start_adr and r_finish_adr;

Each time, when curr_adr match r_finish_adr, curr_adr will jump to r_start_adr , then update r_start_adr and r_finish_adr;

That's mean SW can write new start adr and finish adr before curr_adr match old finish adr .

EE_AUDIO_TDMOUT_A_CTRL1 0x141

| Bits | R/W | Default | Description |
|------|-----|------------|--|
| 31 | R/W | 0x00000000 | eq_drc_sel; 1: select eq_drc output; |
| 30 | R/W | | reg_debug_en,0:disable debug feature; 1: enable; |
| 29 | R/W | | reg_out_lsb_first, 0: msb first; 1: lsb first; |
| 28 | R/W | | reg_rev_ws_in, revert ws; 0: disable; 1: enable; |
| 27 | R/W | | reg_rev_dat, revert data; 0: disable; 1: enable; |
| 26 | R/W | | reg_gain_en, 0:disable; 1: enable data * gain; |

| Bits | R/W | Default | Description |
|-------|-----|---------|---|
| 25:24 | R/W | | reg_frddr_sel, 0:frddr_A;1:frddr_B;2:frddr_C; |
| 23:16 | R/W | | reg_wait_cnt, wait some time when enable set to 1;then start request data from frddr; |
| 12:8 | R/W | | reg_frddr_msb, msb position of data |
| 6:4 | R/W | | reg_frddr_type, 0: split 64bits ddr data to 8 sample, each sample need 8 bits; if bitwidth < 8, left-justified; 1: split 64bits ddr data to 4 sample, each sample need 16 bits; if bitwidth < 16, left-justified ; 2: split 64bits ddr data to 4 sample, each sample need 16 bits; if bitwidth < 16, right-justified ; 3: split 64bits ddr data to 2 sample, each sample need 32 bits; if bitwidth < 32, left-justified; 4: split 64bits ddr data to 2 sample, each sample need 32 bits; if bitwidth < 32, right-justified; |
| 3:0 | R/W | | force_oe_val[3:0]; |

For position of sample in DDR:

| ddr_data [7:0] (byte) | | | | | | | | | |
|-----------------------|-------|-------|-------|-------|-------|-------|-------|-------|--|
| type | byte7 | byte6 | byte5 | byte4 | byte3 | byte2 | byte1 | byte0 | |
| 0 | s7 | s6 | s5 | s4 | s3 | s2 | s1 | s0 | |
| | s15 | s14 | s13 | s12 | s11 | s10 | s9 | s8 | |
| 1/2 | s3 | | s2 | | s1 | | s0 | | |
| | s7 | | s6 | | s5 | | s4 | | |
| 3/4 | s1 | | | s0 | | | | | |
| | s3 | | | s2 | | | | | |

For encoder, it will start output[31] first, then output[30], finished at output[32-bit_num];

If lsb_first, will start s[0], then s[1], finished at s[bit_num+1];

| output [31:0] (bit) | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

|-------|-----|------------|------------------------|
| 31:24 | R/W | 0x00000000 | reg_sample_mode4_timer |
| 23:16 | R/W | | reg_sample_mode5_timer |
| 15:8 | R/W | | reg_sample_mode6_timer |

We need automatically detect the frequency of sample rate (FS).

It will done by search min_period or max_period of SPDIF IN and compared to thresholds.

We can support 7 mode settings.

For example:

If `spdifin_clk` is 166MHz, and we want support 48KHz and 96KHz.

The `min_period` of 48KHz is $1/(48000*64)$ and the counter number by 166MHz is $166000000/(48000*64) = 54$;

96KHz counter number is $166000000/(96000*64) = 27$;

Then set:

```
Width_sel = 1;
Mode0_th = (54+27)/2 = 41;
Mode1_th = 0;
Mode0_timer = 27;
Mode1_timer = 13;
```

Or:

Width_sel = 0;
 Mode0_th = (162+81)/2 = 121;
 Mode1_th = 0;
 Mode0_timer = 27;
 Mode1_timer = 13;

| 15:13 | R/W | | reg_toddr_sel, 0: combined data[m:n] without gap; like S0[m:n],S1[m:n],S2[m:n],... 1: combined data[m:n] as 16bits; like {S0[11:0],4'd0},{S1[11:0],4'd0}... 2: combined data[m:n] as 16bits; like {4'd0,S0[11:0]},{4'd0,{S1[11:0]}... 3: combined data[m:n] as 32bits; like {S0[27:4],8'd0},{S1[27:4],8'd0}... 4: combined data[m:n] as 32bits; like {8'd0,S0[27:4]},{8'd0,{S1[27:4]}... ... |
| 12:8 | R/W | | reg_toddr_m_sel, the msb position in data |

| Bits | R/W | Default | Description |
|------|-----|---------|---|
| 7:3 | R/W | | reg_toddr_n_sel, the lsb position in data |
| 2:0 | R/W | | reg_toddr_src_sel, [7]: loopback; [6]: tadmin_lb; [5]: reserved; [4]: pdmin; [3]: spdifin; [2]: tadmin_c; [1]: tadmin_b; [0]: tadmin_a; |

EE_AUDIO_TORAM_CTRL1 0x1c1

| Bits | R/W | Default | Description |
|-------|-----|------------|---|
| 24 | R/W | 0x00000000 | Insert_chnum; 0: disable; 1: insert chnum[9:0] to data[9:0] |
| 23:16 | R/W | | Reserved ; |
| 11:8 | R/W | | reg_status_sel, control status2 source; |
| 7:0 | R/W | | reg_int_status_clr,clear each bits of int_status register |

EE_AUDIO_TORAM_START_ADDR 0x1c2

| Bits | R/W | Default | Description |
|------|-----|------------|--|
| 31:0 | R/W | 0x00000000 | start_addr, buff_A start address, ignore [2:0] |

EE_AUDIO_TORAM_FINISH_ADDR 0x1c3

| Bits | R/W | Default | Description |
|------|-----|------------|--|
| 31:0 | R/W | 0x00000000 | finish_addr, buff_A finish address, ignore [2:0] |

EE_AUDIO_TORAM_INT_ADDR 0x1c4

| Bits | R/W | Default | Description |
|------|-----|------------|---|
| 31:0 | R/W | 0x00000000 | int_addr, usage A : as an address of interrupt; usage B : as a count of interrupt; |

EE_AUDIO_TORAM_STATUS1 0x1c5

| Bits | R/W | Default | Description |
|------|-----|------------|---|
| 7:0 | R/W | 0x00000000 | int_status, when irq generate, related bit will changed to 1 and can only clear by reg_int_status_clr |

EE_AUDIO_TORAM_STATUS2 0x1c6

| Bits | R/W | Default | Description |
|------|-----|---------|-------------|
|------|-----|---------|-------------|

| | | | |
|------|-----|------------|---|
| 31:0 | R/W | 0x00000000 | status2, by reg_status_sel: 0: current write ram times; 1: current write ram address; |
|------|-----|------------|---|

EE_AUDIO_TORAM_INIT_ADDR 0x1c7

| Bits | R/W | Default | Description |
|------|-----|------------|--|
| 31:0 | R/W | 0x00000000 | first RAM address after enable set to 1; |

11.9.12 TOACODEC Registers**EE_AUDIO_TOACODEC_CTRL0 0x1d0**

| Bits | R/W | Default | Description |
|-------|-----|------------|--|
| 31 | R/W | 0x00000000 | reg_toacodec_en, 0: disable; 1: enable; |
| 15:12 | R/W | | dat_sel: 0: tdmout_a_dat[0]; 1: tdmout_a_dat[1]; 2: tdmout_a_dat[2]; 3: tdmout_a_dat[3]; 4: tdmout_b_dat[0]; 5: tdmout_b_dat[1]; 6: tdmout_b_dat[2]; 7: tdmout_b_dat[3]; 8: tdmout_c_dat[0]; 9: tdmout_c_dat[1]; 10: tdmout_c_dat[2]; 11: tdmout_c_dat[3]; |
| 9:8 | R/W | | lrclk_sel: 0: tdmout_a_lrclk; 1: tdmout_b_lrclk; 2: tdmout_c_lrclk; |
| 7 | R/W | | Bclk_cap_inv: The dat_o and lrclk_o will captured for timing balance after select; If this bit set to 1, will use invert bclk to capture; |
| 6 | R/W | | Bclk_o_inv: if set 1, the final bclk connect to acodec will invert; |
| 5:4 | R/W | | Bclk_sel: 0: tdmout_a_bclk; 1: tdmout_b_bclk; 2: tdmout_c_bclk; |

| Bits | R/W | Default | Description |
|------|-----|---------|---|
| 2:0 | R/W | | Mclk_sel: 0:mst_mclk_a; 1:mst_mclk_b; 2:mst_mclk_c; 3:mst_mclk_d; 4:mst_mclk_e; 5:mst_mclk_f; |

11.9.13 TOHDMITX Registers

EE_AUDIO_TOHDMITX_CTRL0 0x1d0

| Bits | R/W | Default | Description |
|-------|-----|------------|---|
| 31 | R/W | 0x00000000 | reg_toacodec_en, 0: disable; 1: enable; |
| 13:12 | R/W | | dat_sel: 0: tdmout_a_dat; 1: tdmout_b_dat; 2: tdmout_c_dat; |
| 9:8 | R/W | | lrcclk_sel: 0: tdmout_a_lrcclk; 1: tdmout_b_lrcclk; 2: tdmout_c_lrcclk; |
| 7 | R/W | | Bclk_cap_inv: The dat_o and lrcclk_o will captured for timing balance after select; If this bit set to 1, will use invert bclk to capture; |
| 6 | R/W | | Bclk_o_inv: if set 1, the final bclk connect to acodec will invert; |
| 5:4 | R/W | | Bclk_sel: 0: tdmout_a_bclk; 1: tdmout_b_bclk; 2: tdmout_c_bclk; |
| 3 | R/W | | Spdif_clk_cap_inv: The spdif_dat will captured for timing balance after select; If this bit set to 1, will use invert spdif_clk to capture; |
| 2 | R/W | | Spdif_clk_o_inv: if set 1, the final bclk connect to hdmitx will invert; |

| Bits | R/W | Default | Description |
|------|-----|---------|--|
| 1 | R/W | | Spdif_sel: 0:spdif_out; 1:spdif_out_b; |
| 0 | R/W | | Spdif_clk_sel: 0:spdif_clk; 1:spdif_clk_b; |

11.9.14 Audio Locker Register

Base Address: FF64A000

Each register final address = module base address+ address * 4

AUD_LOCK_EN 0X00

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:1 | | | reserved |
| 0 | R/W | 0x0 | Audio_lock_en: 0 = disable; 1= enable. |

AUD_LOCK_SW_RESET 0X01

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:1 | | | reserved |
| 0 | R/W | 0x0 | Audio_lock_soft_reset: 1=generate soft reset pulse |

AUD_LOCK_SW_LATCH 0X02

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:4 | | | reserved |
| 3 | R/W | 0x0 | omclk2ref software latch: 1= generate the latch pulse |
| 2 | R/W | 0x0 | Ref2omclk software latch: 1= generate the latch pulse |
| 1 | R/W | 0x0 | Ref2imclk software latch: 1= generate the latch pulse |
| 0 | R/W | 0x0 | Imclk2ref software latch: 1= generate the latch pulse |

AUD_LOCK_HW_LATCH 0X03

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:4 | | | reserved |
| 3 | R/W | 0x0 | omclk2ref hardware latch enable: 1= enable; 0= disable |

| | | | |
|---|-----|-----|---|
| 2 | R/W | 0x0 | Ref2omclk hardware latch enable: 1= enable ; 0= disable |
| 1 | R/W | 0x0 | Ref2imclk hardware latch enable: 1= enable ; 0= disable |
| 0 | R/W | 0x0 | Imclk2ref hardware latch enable: 1= enable ; 0= disable |

AUD_LOCK_REFCLK_SRC 0X04

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:2 | | | reserved |
| 1:0 | R/W | 0x0 | Ref clk source sel: 0= pclk; 1=oscinclk; 2,3,reserved |

AUD_LOCK_REFCLK_LAT_INT 0X05

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | | | U32 number of reference clock cycles to latch the imclk and omclk |

AUD_LOCK_IMCLK_LAT_INT 0X06

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | | | U32 number of imclk clock cycles to latch the reference clock |

AUD_LOCK_OMCLK_LAT_INT 0X07

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | | | U32 number of omclk clock cycles to latch the reference clock |

AUD_LOCK_REFCLK_DS_INT 0X08

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:10 | | | reserved |
| 9:0 | R/W | 0x0 | U10 downsample step of reference clock for the coueter48ds to be measured, module = x+1 |

AUD_LOCK_IMCLK_DS_INT 0X09

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:10 | | | reserved |
| 9:0 | R/W | 0x0 | U10 downsample step of imclk for the coueter48ds to be measured, module = x+1 |

AUD_LOCK_OMCLK_DS_INT 0X0a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31:10 | | | reserved |

| | | | |
|-----|-----|-----|---|
| 9:0 | R/W | 0x0 | U10 downsample step of omclk for the coueter48ds to be measured, module = x+1 |
|-----|-----|-----|---|

AUD_LOCK_INT_CLR 0X0b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:2 | | | reserved |
| 1 | R/W | 0x0 | It is used to generate pulse to clear the interrupt status |
| 0 | R/W | 0x0 | It is used to generate pulse to clear the interrupt |

AUD_LOCK_GCLK_CTRL 0X0c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------------|
| 31:4 | | | reserved |
| 3:2 | R/W | 0x0 | It is used to gate the module clock |
| 1 | R/W | 0x0 | It is used to gate the register clock |
| 0 | | | reserved |

AUD_LOCK_INT_CTRL 0X0d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:4 | | | reserved |
| 3 | R/W | 0x0 | It is used to mask interrupt for omclk_state |
| 2 | R/W | 0x0 | It is used to mask interrupt for imclk_state |
| 1 | R/W | 0x0 | It is used to mask interrupt for refclk_state1 |
| 0 | R/W | 0x0 | It is used to mask interrupt for refclk_state0 |

RO_REF2IMCLK_CNT_L 0X10

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | R | 0x0 | U48 latched imclk counter48ds of each reg_refclk_latch_interval; Will start from 0 reaching 2^48 |

RO_REF2IMCLK_CNT_H 0X11

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:16 | | | reserved |
| 15:0 | R | 0x0 | U48 latched imclk counter48ds of each reg_refclk_latch_interval; Will start from 0 reaching 2^48 |

RO_REF2OMCLK_CNT_L 0X12

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
|--------|-----|---------|-------------|

| | | | |
|------|---|-----|---|
| 31:0 | R | 0x0 | U48 latched omclk counter48ds of each reg_refclk_latch_interval; Will start from 0 reaching 2^48 |
|------|---|-----|---|

RO_REF2OMCLK_CNT_H 0X13

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:16 | | | reserved |
| 15:0 | R | 0x0 | U48 latched omclk counter48ds of each reg_refclk_latch_interval; Will start from 0 reaching 2^48 |

RO_IMCLK2REF_CNT_L 0X14

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | R | 0x0 | U48 latched reference clock counter48ds of each reg_imclk_latch_interval; Will start from 0 reaching 2^48 |

RO_IMCLK2REF_CNT_H 0X15

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:16 | | | reserved |
| 15:0 | R | 0x0 | U48 latched reference clock counter48ds of each reg_imclk_latch_interval; Will start from 0 reaching 2^48 |

RO_OMCLK2REF_CNT_L 0X16

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | R | 0x0 | U48 latched reference clock counter48ds of each reg_omclk_latch_interval; Will start from 0 reaching 2^48 |

RO_OMCLK2REF_CNT_H 0X17

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:16 | | | reserved |
| 15:0 | R | 0x0 | U48 latched reference clock counter48ds of each reg_omclk_latch_interval; Will start from 0 reaching 2^48 |

RO_REFCLK_PKG_CNT 0X18

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:16 | R | 0x0 | U16,number of reference clk latch interval period conter for imclk latch |
| 15:0 | R | 0x0 | U16,number of reference clk latch interval period conter for imclk latch |

RO_IMCLK_PKG_CNT 0X19

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
|--------|-----|---------|-------------|

| | | | |
|-------|---|-----|---|
| 31:16 | | | reserved |
| 15:0 | R | 0x0 | U16,number of imclk latch interval period counter |

RO_OMCLK_PKG_CNT 0X1a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:16 | | | reserved |
| 15:0 | R | 0x0 | U16,number of omclk latch interval period counter |

RO_AUD_LOCK_INT_STATUS 0X1b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:4 | | | reserved |
| 3 | R | 0x0 | It is used to report interrupt status for omclk_state |
| 2 | R | 0x0 | It is used to report interrupt status for imclk_state |
| 1 | R | 0x0 | It is used to report interrupt status for refclk_state1 |
| 0 | R | 0x0 | It is used to report interrupt status for refclk_state0 |

12. AIFIFO

12.1 RegisterDescription

Base address: 0xffd05000

AIU_AIFIFO_CTRL 0x00

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 13 | R/W | 0 | Aififo request to dcu status |
| 12 | R/W | 0 | Dcu select status |
| 11:5 | R/W | 0 | Aififo word counter number |
| 4:0 | R/W | 0 | How many bits left in the first pop register |

AIU_AIFIFO_STATUS 0x01

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 4:0 | R | 0x0 | How many Bits left in the first pop register |

AIU_AIFIFO_GBIT 0x02

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 15:0 | R | 0x0 | The gb data |

AIU_AIFIFO_CLB 0x03

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 15:0 | R | 0x0 | The gb data |

AIU_MEM_AIFIFO_START_PTR 0x04

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|----------------------------|
| 31:0 | RW | 0x0 | The start address from DDR |

AIU_MEM_AIFIFO_CURR_PTR 0x05

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------------|
| 31:0 | R | 0x0 | The current address from DDR |

AIU_MEM_AIFIFO_END_PTR 0x06

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------|
| 31:0 | RW | 0x0 | The end address from DDR |

AIU_MEM_AIFIFO_BYTES_AVAIL 0x07

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 15:11 | R/W | 0 | Unused. |
| 10 | R/W | 0 | Set this bit to 1 to enable filling of the FIFO controlled by the buffer level control. If this bit is 0, then use bit[1] to control the enabling of filling |
| 9 | R/W | 0 | This bit is set when data can be popped |
| 8 | R/W | 0 | This bit will be high when we're fetching data from the DDR memory To reset this module, set cntl_enable = 0, and then wait for busy = 0. After that you can pulse cntl_init to start over |
| 7 | R/W | 0 | Just in case endian. last minute byte swap of the data out of the FIFO to getbit |
| 6 | R/W | 0 | Unused. |
| 5:3 | R/W | 0 | |
| 2 | R/W | 0 | Set to 1 to enable reading the DDR memory FIFO and filling the pipeline to get-bit Set cntl_empty_en = cntl_fill_en = 0 when pulsing cntl_init |
| 1 | R/W | 0 | Set to 1 to enable reading data from DDR memory |
| 0 | R/W | 0 | After setting the read pointers, sizes, channel masks and read masks, set this bit to 1 and then to 0 NOTE: You don't need to pulse cntl_init if only the start address is being changed |

AIU_MEM_AIFIFO_CONTROL 0x08

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 15:11 | | 0x0 | Unused |
| 10 | RW | 0x0 | Use_level Set This bit to 1 to enable filling of the FIFO controlled by the buffer level control. If This bit is 0, then use Bit[1] to control the enabling of filling |
| 9 | RW | 0x0 | Data Ready. This bit is set when data can be popped |
| 8 | RW | 0x0 | Fill busy This bit will be high when we're fetching data from the DDR memory |
| 7 | RW | 0x0 | Cntl_endian_jic Just in case endian. Last minute byte swap of the data out of the FIFO to get bit |
| 6 | RW | 0x0 | Unused |
| 5: 3 | RW | 0x0 | Endian |
| 2 | RW | 0x0 | Cntl_empty_en Set to 1 to enable reading the DDR memory FIFO and filling the pipeline to get-bit |
| 1 | RW | 0x0 | Cntl_fill_en Set to 1 to enable reading data from DDR memory |
| 0 | RW | 0x0 | Cntl_init |

AIU_MEM_AIFIFO_MAN_WP 0x09

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------|
| 31:0 | RW | 0x0 | Manual write ptr. |

AIU_MEM_AIFIFO_MAN_RP 0x0a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------|
| 31:0 | RW | 0x0 | Manual read ptr. |

AIU_MEM_AIFIFO_LEVEL 0x0b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 1 | R/W | 0 | Set to 1 for manual write pointer mode |
| 0 | R/W | 0 | Set high then low after everything has been initialized |

AIU_MEM_AIFIFO_BUF_CNTL 0x0c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 1 | RW | 0x0 | manual mode Set to 1 for manual write pointer mode |
| 0 | RW | 0x0 | Init Set high then low after everything has been initialized |

AIU_MEM_AIFIFO_BUF_WRAP_COUNT 0x0d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 29:24 | R/W | 0 | A_brst_num |
| 21:16 | R/W | 0 | A_id |
| 15:0 | R/W | 0 | level_hold |

AIU_MEM_AIFIFO_MEM_CTL 0x0f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:16 | R/W | 0 | drop_bytes |
| 15:14 | R/W | 0 | drop_status (Read-Only) |
| 13:12 | R/W | 0 | sync_match_position (Read-Only) |
| 11:6 | R/W | 0 | reserved |
| 5:4 | R/W | 0 | TIME_STAMP_NUMBER, 0-32bits, 1-64bits, 2-96bits, 3-128bits |
| 3 | R/W | 0 | stamp_soft_reset |
| 2 | R/W | 0 | TIME_STAMP_length_enable |
| 1 | R/W | 0 | TIME_STAMP_sync64_enable |
| 0 | R/W | 0 | TIME_STAMP_enable |

AIFIFO_TIME_STAMP_CNTL 0x10

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------|
| 31:0 | R/W | 0 | TIME_STAMP_SYNC_CODE_0 |

AIFIFO_TIME_STAMP_SYNC_0 0x11

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------|
| 31:0 | R/W | 0 | TIME_STAMP_SYNC_CODE_1 |

AIFIFO_TIME_STAMP_SYNC_1 0x12

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------|
| 31:0 | R/W | 0 | TIME_STAMP_0 |

AIFIFO_TIME_STAMP_0 0x13

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------|
| 31:0 | R/W | 0 | TIME_STAMP_1 |

AIFIFO_TIME_STAMP_1 0x14

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------|
| 31:0 | R/W | 0 | TIME_STAMP_2 |

AIFIFO_TIME_STAMP_2 0x15

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------|
| 31:0 | R/W | 0 | TIME_STAMP_3 |

AIFIFO_TIME_STAMP_3 0x16

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------|
| 31:0 | R/W | 0 | TIME_STAMP_LENGTH |

AIFIFO_TIME_STAMP_LENGTH 0x17

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------|
| 31:0 | RW | 0x0 | TIME_STAMP_LENGTH |

13. Memory Interface

This part describes A311D's memory interfaces from the following aspects:

- DDR
- NAND
- EMMC/SDIO/SD
- SPICC
- SPIFC

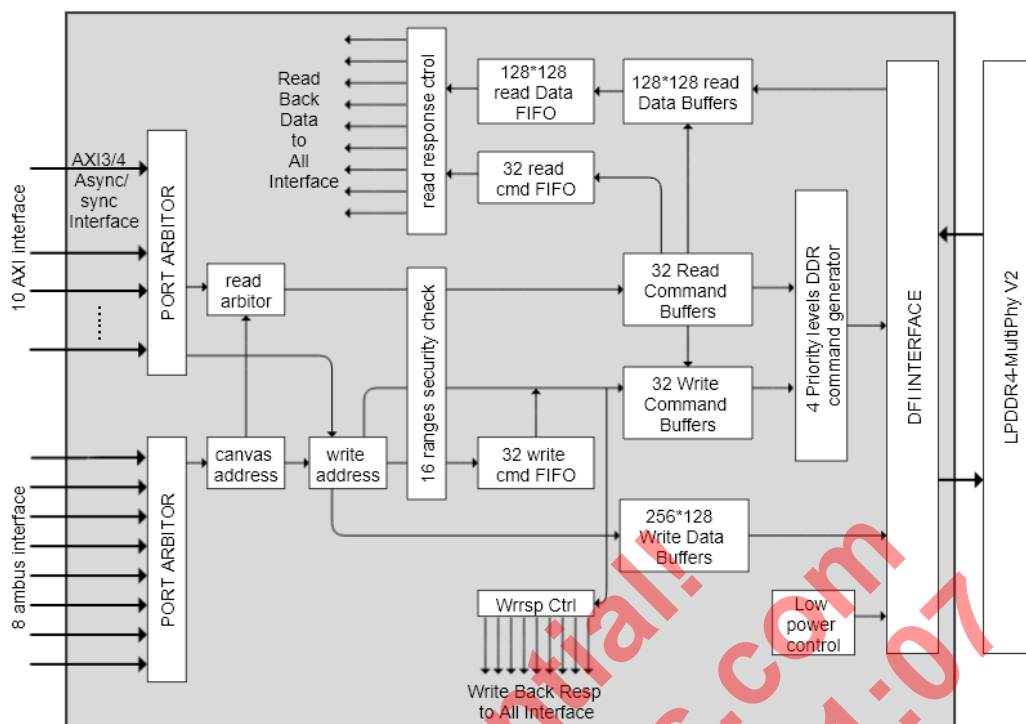

13.1 DDR

13.1.1 Overview

consists of the 2 parts: DDR memory controller (DMC) and DDR PHY controller. The main features of this module are listed below:

- Support DDR3/4 SDRAM, LPDDR3, LPDDR4 SDRAM
- Support 32bits and 16bits data mode.
- Unbalanced 16bits DDR3/4 SDRAM size in 32 bits data bus mode.
- Each DDR command buffer contains 64bytes data.
- 32 write command buffer and 32 read command buffer for DDR command generation.
- READ command reordering regardless ID.
- Write command reordering regardless IDs.
- Write and read data coherence.
- Optimized DDR command reordering based on:
 - Priority
 - Rank
 - Bank
 - Bank group interleaving(DDR4)
 - Read/write
- 4 level priority control to reduce the latency for the urgent request.
- Unblocking urgent control through Asynchronous FIFO and pipelines.
- Additional 128 depth write data FIFO to balance DMC and AXI master write throughputs.
- Additional 128*128 read data FIFO to balance DMC and AXI master read throughputs.
- Per Port Per ID Security Control through the all security ranges.
- Up to 16 security range can be defined.
- Support up to 16 AXI3/4 and 8 AMBUS(Amlogic) interfaces.
- Optimized AMBUS to support 0~3 burst to improve DDR efficiency and reduce
- Low power control with LPDDR4 Multi-PHY V2.
 - Adding auto Self-Refresh mode for super low bandwidth application.
 - Auto power down mode for most of application.
 - Hardware Fast Frequency change less than 10uS.

Figure 13-1 Diagram of DDR Interface

13.1.2 RegisterDescription

DMC Register spec.

DMC unsecure register. Base address 0xFF638000. Each register takes 4 byte address.

Each register's final address = 0xFF638000+ offset * 4.

AM_DDR_PLL_CNTL0 0x0000

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|----------------|
| 29 | | | dpll_reset. |
| 28 | | | dpll_en. |
| 27:26 | | | dpll_clk_en |
| 20:19 | | | od1 |
| 18:16 | | | od |
| 14:10 | | | dpll_ref_div_n |
| 8:0 | | | dpll_int_num |

AM_DDR_PLL_CNTL1 0x0001

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------|
| 18:0 | | | ddr_dpll_frac |

AM_DDR_PLL_CNTL2 0x0002

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------|
| 22:20 | | | fref_sel |
| 17:16 | | | os_ssc |
| 15:12 | | | ssc_str_m |
| 8 | | | ssc_en |
| 7:4 | | | ssc_dep_sel |
| 1:0 | | | dppll ss_mode |

AM_DDR_PLL_CNTL3 0x0003

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|----------------|
| 31 | | | afc bypass |
| 30 | | | afc clk sel |
| 29 | | | code new |
| 28 | | | dco_m_en |
| 27 | | | dco_sdm_en |
| 26 | | | div2 |
| 25 | | | div mode |
| 24 | | | fast_lock mode |
| 23 | | | fb_pre_div |
| 22 | | | filter_mode |
| 21 | | | fix_en |
| 20 | | | freq_shift_en |
| 19 | | | load |
| 18 | | | load_en |
| 17 | | | lock_f |
| 16 | | | pulse_width_en |
| 15 | | | sdmnc_en |
| 14 | | | sdmnc_mode |
| 13 | | | sdmnc_range |
| 12 | | | tdc_en |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------|
| 11 | | | tdc_mode_sel |
| 10 | | | wait_en |

AM_DDR_PLL_CNTL4 0x0004

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 1:0 | | | pfd_gain |
| 7:4 | | | filter_pvt1 |
| 11:8 | | | filter pvt2 |
| 13:12 | | | acq_gain |
| 18:16 | | | lambda0 |
| 22:20 | | | lambda1 |
| 26:24 | | | rou |
| 30:28 | | | alpha |

AM_DDR_PLL_CNTL5 0x0005

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 15:0 | | | reve |
| 21:16 | | | lm_s |
| 27:24 | | | lm_w |
| 30:28 | | | adj_vco_ldo |

AM_DDR_PLL_CNTL6 0x0006

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 15:0 | | | reve |
| 21:16 | | | lm_s |
| 27:24 | | | lm_w |
| 30:28 | | | adj_vco_ldo |

AM_DDR_PLL_STS 0x0007

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------|
| 31 | | | DDR_PLL_LOCK |
| 30:19 | | | not used |
| 18 | | | DDR_AFC_DONE |

| | | | |
|------|--|--|-------------------|
| 17 | | | DDR_PLL_LOCK |
| 16:7 | | | DDR_DPLL_OUT_RSV |
| 6:0 | | | DDR_SDMNC_MONITOR |

DDR_CLK_CNTL 0x0008

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | | | ddr_pll_clk enable. enable the clock from DDR_PLL to clock generateion. |
| 30 | | | ddr_pll_prod_test_en. enable the clock to clock/32 which to clock frequency measurement and production test pin. |
| 29 | | | not used. |
| 28 | | | clock generation logic soft reset. 0 = reset. |
| 27 | | | phy_4xclk phase inverter |
| 26 | | | pll_freq divide/2. 1: use pll div/2 clock as the n_clk. 0: use pll clock as n_clk. this setting is used for the DDR PHY PLL fast lock mode. |
| 2 | | | enable dmc_clk. |
| 1 | | | enable LPDDR4-PHY DfiClk. |
| 0 | | | enable LPDDR4-PHY DfiCtlClk. |

DDR_PHY_CTRL 0x0009

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------|
| 4 | | | DDR PHY PwrOkIn pin. |
| 1 | | | DDR PHY APB soft reset_n. |
| 0 | | | phy_reset_n. |

AM_DDR_PLL_FREQ1_OD 0x000c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 8 | | | currunt FREQ selection. it can forced to change to select which frequency to select, or it can auto changed by FREQ change hardware. |
| 5:4 | | | OD1. |
| 2:0 | | | OD. |

The following registers' base address is 0xff638000. Each register takes 4 byte address.

Each register's final address = 0xff638000 + offset * 4.

DMC_REQ_CTRL 0x0000

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 23 | | | enable dmc request of ambus chan 7. Reserved for GE2D interface. Async interface. |

| | | | |
|----|--|--|---|
| 22 | | | enable dmc request of ambus chan 6. DOS HCODEC interface Sync interface. |
| 21 | | | enable dmc request of ambus chan 5. DOS VDEC interface Sync interface. |
| 20 | | | enable dmc request of ambus chan 4. VPU write interface 1 Sync interface. |
| 19 | | | enable dmc request of ambus chan 3. VPU write interface 0 Sync interface. |
| 18 | | | enable dmc request of ambus chan 2. VPU read interface 2. Sync interface. |
| 17 | | | enable dmc request of ambus chan 1. VPU read interface 1. Sync interface. |
| 16 | | | enable dmc request of ambus chan 0. VPU read interface 0. Sync interface. |
| 9 | | | enable dmc request of axibus chan 9. wave async interface. |
| 8 | | | enable dmc request of axibus chan 8 hevc_b async interface. |
| 7 | | | enable dmc request of axibus chan 7. DEVICE. Async interface. |
| 6 | | | enable dmc request of axibus chan 6. USB Async interface. |
| 5 | | | enable dmc request of axibus chan 5. reserved for dmc_test. |
| 4 | | | enable dmc request of axibus chan 4. hevc front Async interface. |
| 3 | | | enable dmc request of axibus chan 3. HDCP/HDMI Async interface. |
| 2 | | | enable dmc request of axibus chan 2. pcie async |
| 1 | | | enable dmc request of axibus chan 1. Dvalin . async interface. |
| 0 | | | enable dmc request of axibus chan 0. CPU/A53 async interface. |

DMC_SOFT_RST 0x0001

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | | | Reserved. |
| 23:16 | | | 8 AMBUS input interface n_clk domain reset_n signal. 0 : reset. 1: normal working mode. |
| 15:0 | | | 16 AXI BUS input intefaces n_clk domain reset_n signal. 0: reset. 1: normal working mode. each bit for one interface. |

DMC_SOFT_RST1 0x0002

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:24 | | | Not used. |
| 23.16 | | | 8 am bus interfaces master clock domain reset_n signal. 0 : reset : 1 normal working mode. |
| 15:0. | | | 16 AXI bus interfaces master clock domain reset_n signal. 0 : reset : 1 normal working mode. |

DMC_SOFT_RST2 0x0003

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31~11 | | | Reserved. |
| 10 | | | DMC DFI cmd soft reset_n |
| 9 | | | DMC DFI MISC soft reset_n |
| 8 | | | DMC DFI data soft reset_n |
| 7 | | | DMC DFI dcu soft reset_n |
| 6 | | | DMC siu soft reset_n |
| 5 | | | DMC test soft reset_n. 0 : reset. 1 : normal working mode. |
| 4 | | | DMC low power control moudle soft reset_n. 0 : reset. 1 : normal working mode. |
| 3 | | | DMC QOS monitor module soft reset_n. 0 : reset. 1 : normal working mode. |
| 2 | | | DMC register modle soft reset_n. 0 : reset. 1 : normal working mode. |
| 1 | | | DMC canvas transfer module soft reset_n. 0 : reset. 1 : normal working mode. |
| 0 | | | DMC command buffers and command generation modules soft reset. 0 = reset. 1: |

DMC_RST_STS1 0x0004

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | | | Not used. |
| 23:0 | | | Read only. The DMC_SOFT_RST1 signal in n_clk domain. When one of the 2 clocks is too slow or too fast, we can read this register to make sure another clock domain reset is done. |

DMC_VERSION 0x0005

DMC version number.

DMC_RAM_PD 0x0006

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 5:4 | | | DDR channel 1 READ/WRITE data path SRAMS in power down control. 2'b11: power down. 2'b00: working mode. |
| 3:2 | | | DDR channel 0 READ/WRITE data path SRAMS in power down control. 2'b11: power down. 2'b00: working mode. |
| 1:0 | | | CANVAS LUT memories in power down mode control. 2'b11: power down. 2'b00: working mode. |

DC_CAV_LUT_DATA1 0x0012

low 32 bits of canvas data which need to be configured to canvas memory.

DC_CAV_LUT_DATAH 0x0013

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 60:58 | | | Canvas block mode. 2: 64x32, 1: 32x32; 0: linear mode. |
| 57:56 | | | canvas Y direction wrap control. 1: wrap back in y. 0: not wrap back. |
| 55 | | | canvas X direction wrap control. 1: wrap back in X. 0: not wrap back. |
| 54 | | | canvas Hight. |
| 53:41 | | | canvas Width, unit: 8bytes. must in 32bytes boundary. that means last 2 bits must be 0. |
| 40:29 | | | cavnas start address. unit. 8 bytes. must be in 32bytes boundary. that means last 2bits must be 0. |
| 28:0 | | | Canvas block mode. 2 : 64x32, 1: 32x32; 0 : linear mode. |

DC_CAV_LUT_ADDR 0x0014

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 9:8 | | | Write 9:8 2'b10. the canvas data will saved in canvas memory with addres 7:0. |
| 7:0 | | | 256 canvas Look up table address. |

DC_CAV_LUT_RDATAL 0x0015

CBUS low 32bytes canvas read back data from LUT.

DC_CAV_LUT_RDATAH 0x0016

CBUS low 32bytes canvas read back data from LUT.

DC_CAV_BLK_CTRL0 0x0018

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------|
| 31:0 | | | blkmode. 1 : 32x32. 0 : others. |

DC_CAV_BLK_CTRL1 0x0019

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------|
| 63:32 | | | blkmode. 1 : 32x32. 0 : others. |

DC_CAV_BLK_CTRL2 0x001a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------|
| 95:64 | | | blkmode. 1 : 32x32. 0 : others. |

DC_CAV_BLK_CTRL3 0x001b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------|
| 127:96 | | | blkmode. 1 : 32x32. 0 : others. |

DC_CAV_BLK_CTRL4 0x001c

| Bit(s) | R/W | Default | Description |
|---------|-----|---------|---------------------------------|
| 159:128 | | | blkmode. 1 : 32x32. 0 : others. |

DC_CAV_BLK_CTRL5 0x001d

| Bit(s) | R/W | Default | Description |
|---------|-----|---------|---------------------------------|
| 191:160 | | | blkmode. 1 : 32x32. 0 : others. |

DC_CAV_BLK_CTRL6 0x001e

| Bit(s) | R/W | Default | Description |
|---------|-----|---------|---------------------------------|
| 223:192 | | | blkmode. 1 : 32x32. 0 : others. |

DC_CAV_BLK_CTRL7 0x001f

| Bit(s) | R/W | Default | Description |
|---------|-----|---------|---------------------------------|
| 255:224 | | | blkmode. 1 : 32x32. 0 : others. |

DMC_MON_CTRL0 0x0020

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | | | qos_mon_en. write 1 to trigger the enable. polling this bit 0, means finished. or use interrupt to check finish. |
| 30 | | | qos_mon interrupt clear. clear the qos monitor result. read 1 = qos mon finish interrupt. |
| 3 | | | qos monitor 3 enable. |
| 2 | | | qos monitor 2 enable. |
| 1 | | | qos monitor 1 enable. |
| 0 | | | qos monitor 0 enable. |

DMC_MON_CTRL1 0x0021

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 23:0 | | | qos monitor 0 channel select. 8 ambus port and 16 AXI port selection. 1 bit for one port. |

DMC_MON_CTRL2 0x0022

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------------|
| 15:0 | | | port select for the selected channel. |

DMC_MON_CTRL3 0x0023

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
|--------|-----|---------|-------------|

| | | | |
|------|--|--|---|
| 23:0 | | | qos monitor 0 channel select. 8 ambus port and 16 AXI port selection. 1 bit for one port. |
|------|--|--|---|

DMC_MON_CTRL4 0x0024

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------------|
| 15:0 | | | port select for the selected channel. |

DMC_MON_CTRL5 0x0025

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 23:0 | | | qos monitor 0 channel select. 8 ambus port and 16 AXI port selection. 1 bit for one port. |

DMC_MON_CTRL6 0x0026

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------------|
| 15:0 | | | port select for the selected channel. |

DMC_MON_CTRL7 0x0027

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------------|
| 23:0 | | | port select for the selected channel. |

DMC_MON_CTRL8 0x0028

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------------|
| 15:0 | | | port select for the selected channel. |

DMC_MON_ALL_REQ_CNT 0x0029

At the test period, the whole MMC request time.

DMC_MON_ALL_GRANT_CNT 0x002a

At the test period, the whole MMC granted data cycles. 64bits unit.

DMC_MON_ONE_GRANT_CNT 0x002b

At the test period, the granted data cycles for the selected channel and ports.

DMC_MON_SEC_GRANT_CNT 0x002c

At the test period, the granted data cycles for the selected channel and ports.

DMC_MON_THD_GRANT_CNT 0x002d

At the test period, the granted data cycles for the selected channel and ports.

DMC_MON_FOR_GRANT_CNT 0x002e

At the test period, the granted data cycles for the selected channel and ports.

DMC_MON_TIMER 0x002f

Timer for the monitor period.

DMC_CLKG_CTRL0 0x0030

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 23:16 | | | Enable the 8 ambus interfaces both main and n_clk auto clock gating function. each 1 bit for one interface. |
| 15:0 | | | Enable the 16 axi interfaces both main and n_clk auto clock gating function. each 1 bit for one interface. |

DMC_CLKG_CTRL1 0x0031

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 23:16 | | | Force to disable the 8 ambus interfaces both main and n_clk. each 1 bit for one interface. |
| 15:0 | | | Force to disable the 16 axi interfaces both main and n_clk. each 1 bit for one interface. |

DMC_CLKG_CTRL2 0x0032

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 7 | | | Force to disalbe the clock of write rsp generation. |
| 6 | | | Force to disalbe the clock of read rsp generation. |
| 5 | | | Force to disalbe the clock of command filter. |
| 4 | | | Force to disalbe the clock of write reorder buffer. |
| 3 | | | Force to disalbe the clock of write data buffer. |
| 2 | | | Force to disalbe the clock of read reorder buffer. |
| 1 | | | Force to disalbe the clock of read canvas. |
| 0 | | | Force to disalbe the clock of write canvas. |

DMC_CLKG_CTRL3 0x0033

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 7 | | | Enalbe auto clock gating for write rsp generation. |
| 6 | | | Enalbe auto clock gating for read rsp generation. |
| 5 | | | Enalbe auto clock gating for ddr0 command filter. |
| 4 | | | Enalbe auto clock gating for ddr0 write reorder buffer. |
| 3 | | | Enalbe auto clock gating for ddr0 write data buffer. |
| 2 | | | Enalbe auto clock gating for ddr0 read reorder buffer. |
| 1 | | | Enalbe auto clock gating for read canvas. |
| 0 | | | Enalbe auto clock gating for write canvas. |

DMC_CHAN_STS 0x0036

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | RO | | Not used. |
| 27 | RO | | always 1 |
| 26 | RO | | ddr0 write data buffer idle. 1 : idle 0: busy. |
| 25 | RO | | always 1. |
| 24 | RO | | ddr0 wbuf idle. 1 : idle 0: busy. |
| 23:16 | RO | | ambus channel idle. 1 : idle 0: busy. |
| 15:0. | RO | | axibus channel idle. 1 : idle 0: busy. |

DMC_2ARB_CTRL 0x0038

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 32:24 | | | Not used. |
| 22. | | | always 1 |
| 21:12 | | | ddr0 write data buffer idle. 1 : idle 0: busy. |
| 11:6. | | | always 1. |
| 5:0. | | | ddr0 wbuf idle. 1 : idle 0: busy. |

DMC_CMD_FILTER_CTRL1 0x0040

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------------|
| 30 | | | 1 : use DDR4 special filter. |

DMC_CMD_FILTER_CTRL2 0x0041

Not used.

DMC_CMD_FILTER_CTRL3 0x0042

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------|
| 31. | | | force wbuf empty. |
| 30:26 | | | wbuf high level number |
| 25:21 | | | wbuf mid level number |
| 20:16 | | | wbuf low level number |
| 14:10 | | | rbuf high level number |
| 9:5 | | | rbuf middle level number |
| 4:0 | | | rbuf low level number |

DMC_CMD_FILTER_CTRL4 0x0043

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 29:25 | | | tITW.long |
| 24:20 | | | tITW. short |
| 19:12 | | | tAP auto precharge the bank not used if idle that long time. |
| 11:6 | | | write to read accesses if there write hit request. |
| 5:0 | | | read to write accesses if there write hit request. |

DMC_CMD_FILTER_CTRL5 0x0044

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:24 | | | Once ddr data bus switch to read, the maximum read command number to give up the bus when there's write request pending for write buffer. |
| 23:16 | | | Once ddr data bus switch to write, the maximum write command number to give up the bus when there's read request pending too long. |
| 15:8. | | | Once ddr data bus switch to read, the minimum read command number to transfer back to write stage if there's still pending read request. |
| 7:0. | | | Once ddr data bus switch to write, the minimum write command number to transfer back to read stage if there's still pending write request. |

DMC_CMD_BUFFER_CTRL 0x0045

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:26 | | | Total write buffer number. Default 32. |
| 25:20 | | | Total read buffer number. Default 32. |
| 19:8 | | | Reserved |
| 7:0 | | | aw_pending_inc_num. increase write urgent level 1 when write command waiting to in write buffer that long. |

DMC_CMD_BUFFER_CTRL1 0x0046

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:26 | | | Read buffer number in non-urgent request. |
| 25:20 | | | Read buffer bank miss watch dog threshold. |
| 19:8 | | | Read buffer urgent level 3 counter inc weight. |
| 7:0 | | | Read buffer urgent level 2 counter inc weight. |
| 3:0 | | | Read buffer urgent level 2 counter inc weight. |

DMC_CMD_FILTER_CTRL6 0x0047

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:24 | | | write urgent 3 request pending hold num. |
| 23:16 | | | write urgent 2 request pending hold num. |
| 15:8 | | | write urgent 1 request pending hold num. |
| 7:0 | | | write urgent 0 request pending hold num. |

DMC_RDDBUF_CTRL 0x0048

Not used.

DMC_CMD_FILTER_CTRL7 0x0049

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 15:8 | | | Write to read waiting cycles if there write hit request. |
| 7:0 | | | Read to write waiting cycles if there write hit request. |

DMC_AM0_CHAN_CTRL 0x0060

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | | | Enable to incr 2 urgent levels if the pending cycles is doubled. |
| 30 | | | Enable to incr 3 urgent levels. |
| 29:20 | | | Write request pending cycle number to inc urgent level if not granted. |
| 18. | | | Force this channel all request to be super urgent request. |
| 17. | | | Force this channel all request to be urgent request. |
| 16. | | | Force this channel all request to be non-urgent request. |
| 13:4. | | | Read request pending cycle number to inc urgent level if not granted. |
| 3:0 | | | Canvas arbiter arbiter weight |

DMC_AM0_HOLD_CTRL 0x0061

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 15:8 | | | Read hold num. Max outstanding request number. |
| 7:0 | | | Read hold release num. If the outstanding request == hold num, then hold this request unless the outstanding request number below the hold release number, then continue to request. |

DDR1_ADDRMAP_4 0x00d9

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------|
| 29:25 | | | ra16 for DDR4 SDRAM |
| 24:20 | | | bg1 for DDR4 SDRAM. |
| 19:15 | | | ba2. or bg0 for DDR4 SDRAM. |
| 14:10 | | | ba1. |
| 9:5 | | | ba0. |
| 4:0 | | | ra15. |

DMC_DDR_CTRL 0x00da

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:28 | | | 16bit selection for DDR3/4 not balanced mode. 4'b1000: 3Gbyte mode. low 2Gbyte is in 32bits mode. 2G~3G is 16bits mode. 4'b0100: 1.5Gbyte mode. low 1Gbyte is in 32bits mode. 1G~1.5G is in 16bits mode. 4'b0010: 768Mbyte mode. low 512Mbyte is in 32bits mode. 512M~768M is in 16bits mode. 4'b0001: 384Mbyte mode. low 25Mbyte is in 32bits mode. 256M~384M is in 16bits mode. 4'b000 or others balance mode. ether 32bits mode or 16bits mode depends on bit |
| 27 | | | 0 : canvas use 64bytes boundary 1 : canvas use 32bytes boundary. |
| 24:22 | | | 3'b000 : ddr3 mode. 3'b001 : ddr4 mode. 3'b010 : lppdr3 mode. 3'b011 : lppdr4 mode. |
| 21 | | | rank1 enable bit. if 1, rank1 used the address map is as bit 5:3 defined. |
| 20 | | | DDR4 BG1 enable bit. |
| 18 | | | always 0. |
| 16 | | | 1 only use 16bits data in a 32bits phy data interface. 0 : normal data interface. |
| 5:3 | | | DDR rank 1 size. 3'b000 : DDR rank 1 is 128Mbyte. 3'b001 : DDR rank 1 is 256Mbyte. 3'b010 : DDR rank 1 is 512Mbyte. 3'b011 : DDR rank 1 is 1Gbyte. 3'b100 : DDR rank 1 is 2Gbyte. 3'b101 : DDR rank 1 is 4Gbyte. others : reserved. |
| 2:0 | | | DDR rank 0 size. 3'b000 : DDR rank 0 is 128Mbyte. 3'b001 : DDR rank 0 is 256Mbyte. 3'b010 : DDR rank 0 is 512Mbyte. 3'b011 : DDR rank 0 is 1Gbyte. 3'b100 : DDR rank 0 is 2Gbyte. 3'b101 : DDR rank 0 is 4Gbyte. others : reserved. |

DDR_APB_SEC_CTRL 0x00db

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 19:16 | | | DMC normal APB register secure control. |
| 19: | | | 1: all can write those register. 0: the APB_PROT[0] must match the bit 0 to write those register. |
| 15:12 | | | DMC sticky APB register secure control. |
| 15. | | | 1: All APB bus can write those registers. 0: The APB_PROT[0] must match the bit 12 to write those register. |
| 11:8. | | | DMC DDR PLL clock related APB register secure control. |
| 11. | | | 1: All APB bus can write those registers. 0: The APB_PROT[0] must match the bit 8 to write those register. |
| 7:4. | | | DMC DDR SDRAM protocol control register control |
| 11. | | | 1: All APB bus can write those registers. 0: The APB_PROT[0] must match the bit 4 to write those register. |
| 3:0. | | | LPDDR4 PHY APB register secure control. |
| 3 | | | 1: All APB bus can write those registers. 0: The APB_PROT[0] must match the bit 0 to write those register. |

DMC_TEST_WRCMD_ADDR 0x00dc**DMC_TEST_RDRSP_ADDR 0x00dd****DMC_TEST_RDCMD_ADDR 0x00de****DMC_TEST_WDG 0x00df**

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------|
| 31:16 | | | Write response watch dog. |
| 15:0 | | | Read response watch dog. |

DMC_TEST_STA 0x00e0

Test start address.

For non-sha mode, the last 5 bits would be ignored. The test address at 32bytes boundary.

For sha mode, address must be in 64 bytes boundary. That mean the last 6 bits must be 0.

DMC_TEST_EDA 0x00e1

Test end address.

For non-sha mode, the last 5 bits would be ignored. The test address at 32bytes boundary.

For sha mode, address must be in 64 bytes boundary. That mean the last 6 bits must be 1.

DMC_TEST_CTRL 0x00e2

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------|
| 31 | | | enable test. |

| | | | |
|-------|--|--|---|
| 30 | | | when enable test, enable the write to DDR function. |
| 29 | | | when enable test, enable the read from DDR function. |
| 28 | | | when enable test, enable the sha calculation function must be same as read enable but without write function. |
| 27 | | | enable to compare data. when do the read enable to enable the error comparison. suppose the read data should be same as the data in the write buffer. |
| 26 | | | reserved. |
| 25 | | | address generation type. 0: continuous increase the address in the range of test start address and test end address. 1: test module would pick the random address from test start address and test end address. |
| 24 | | | 0 : use the DMC_TEST_NUM register as the counter of test numbers. For write if the write command number == the DMC_TEST_NUM, the write is done. For read if the read command number == the DMC_TEST_NUM, the read is done. For one read command can be repeated repeat number times. 1 : finished at end address. |
| 23 | | | 1 : the first write is {WD3, WD2, WD1, WD0}, then the latter is the previous data plus a pattern. ({ + WD7, + WD6, + WD5, + WD4}). 0 : the WDATA is the data in write register. |
| 23 | | | reserved. |
| 22:20 | | | read repeat times. for non-sha function, we can define multi times of the read. the test module would repeat the same address repeat times. |
| 19 | | | limit write. 0: no outstanding write request limitation. 1: limit the outstanding write commands to the number of bits [15:8] |
| 18 | | | limit read. 0. no outstanding read request limitation. 1. limit the read outstanding request to the number of bits [7:0]. |
| 17:16 | | | sha mode for sha function enabled. 00 : not used. 01 : sha1. 2: sha2-256. 3: sha2_224. not used in GXL fixed to be Sha 2. |
| 15:8 | | | write outstanding commands limit. |
| 7:0 | | | read outstanding commands limit. |

The following registers' base address is 0xff638400. Each register takes 4 byte address.

Each register's final address = 0xff638400 + offset * 4.

DMC_DRAM_TMRD 0x0000

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 3:0 | | | tMRD. |

DMC_DRAM_TRFC 0x0001

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 9:0 | | | tRFC |

DMC_DRAM_TRP 0x0002

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------------|
| 21:16 | | | tRP for precharge all banks. |
| 5:0 | | | tRP for precharge one bank. |

DMC_DRAM_TRTW 0x0003

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 5:0 | | | tRTW |

DMC_DRAM_TCL 0x0004

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------|
| 5:0 | | | CL/tRL. read latency. |

DMC_DRAM_TCWL 0x0005

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------|
| 5:0 | | | CWL: write latency. |

DMC_DRAM_TRAS 0x0006

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
|--------|-----|---------|-------------|

| | | | |
|-----|--|--|---|
| 7:0 | | | tRAS. minimum active to precharge time for same bank. |
|-----|--|--|---|

DMC_DRAM_TRC 0x0007

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 7:0 | | | tRC. minimum active to active time for same bank. |

DMC_DRAM_TRCD 0x0008

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 7:0 | | | tRCD active to read/write timing for same bank. |

DMC_DRAM_TRRD 0x0009

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 21:16 | | | tRRD_I active bank A to active B in same band group for DDR4. |
| 5:0 | | | tRRD/tRRD_s active bank A to active bank b time. tRRD_s: active bank A to active bank b in different bank group for DDR4. |

DMC_DRAM_TFAW 0x000a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------------|
| 8:0 | | | tFAW. four active command windows |

DMC_DRAM_TRTP 0x000b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 5:0 | | | tRTP. |

DMC_DRAM_TWR 0x000c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 5:0 | | | tWR. |

DMC_DRAM_TWTR 0x000d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 5:0 | | | tWTR. |

DMC_DRAM_TCCD 0x000e

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 19:16 | | | tCCD/tCCD_I. |
| 3:0 | | | tCCD/tCCD_s read to read command time or write to write command time. |

DMC_DRAM_TEXSR 0x000f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 9:0 | | | tEXSR. EXIT SELF-REFRESH to read/write command. |

DMC_DRAM_TXS 0x0010

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 9:0 | | | tEXSR. EXIT SELF-REFRESH to read/write command. |

DMC_DRAM_TXP 0x0011

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 3:0 | | | tXP. EXIT power down to other command time |

DMC_DRAM_TXPDLL 0x0012

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 9:0 | | | tXPDLL, EXIT power down to read/write command time(need to relock PLL). |

DMC_DRAM_TZQCS 0x0013

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------------------|
| 7:0 | | | ZQCS command to other command time. |

DMC_DRAM_TCKSRE 0x0014

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 4:0 | | | enter self-refresh to disable clock time. |

DMC_DRAM_TCKSRX 0x0015

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 4:0 | | | enable clock to exit self-refresh time. |

DMC_DRAM_TCKE 0x0016

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------------|
| 4:0 | | | CKE high or low minimum time. |

DMC_DRAM_TMOD 0x0017

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------------------|
| 4:0 | | | tMOD. MRR/MRW to other command time. |

DMC_DRAM_TDQS 0x0018

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
|--------|-----|---------|-------------|

| | | | |
|-----|--|--|---|
| 3:0 | | | tDQS. the delay to access different rank. |
|-----|--|--|---|

DMC_DRAM_TRSTL 0x0019

Not used.

DMC_DRAM_TZQLAT 0x001a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 5:0 | | | ZQ LATCH command to other comand timing in LPDDR4 mode. |

DMC_DRAM_TMRR 0x001b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 7:0 | | | tMRR not used in DMC. not support MR READ. |

DMC_DRAM_TCKESR 0x001c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 9:0 | | | tCKESR. CKE low minimum pulse in self refresh mode. |

DMC_DRAM_TDPD 0x001d

Not support.

DMC_DRAM_DFITCTRLDELAY 0x001e

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------|
| 3:0 | | | DFI_t_ctrIdealy |

DMC_DRAM_DFITPHYWRDATA 0x001f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------|
| 5:0 | | | dfi_t_phy_wrdata. |

DMC_DRAM_DFITPHYWRLAT 0x0020

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 5:0 | | | dfi_t_phy_wrlat. in DDR3/4/LPDDR3 mode: WL -5. in LPDDR4 mode: WL -5 + 2. |

DMC_DRAM_DFITRDDATAEN 0x0021

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 5:0 | | | dfi_t_rddata_en. in DDR3/4/LPDDR3 mode: RL -5. in LPDDR4 mode : RL -5 + 1. |

DMC_DRAM_DFITPHYRDLAT 0x0022

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------|
| 5:0 | | | dfi_t_rdlat. |

DMC_DRAM_DFITCTRLUPDMIN 0x0023

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 7:0 | | | CTRLUPD_MIN minimux clock cycle to maintain CTRLUPD_REQ. |

DMC_DRAM_DFITCTRLUPDMAX 0x0024

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 7:0 | | | CTRLUPD_MAX. maxmum clock cycle to maintain CTRLUPD_REQ if no CTRLUPD_ACK response. |

DMC_DRAM_DFITMSTRRESP 0x0025

Not used.

DMC_DRAM_DFITREFMSKI 0x0026

Not used.

DMC_DRAM_DFITCTRLUPDI 0x0027

Not used.

DMC_DRAM_DFITDRAMCLK 0x0028

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------------|
| 17 | | | dram clk1 enable. |
| 16 | | | dram clk0 enable. |
| 15:8 | | | DRAM CLK disable waiting time |
| 7:0 | | | DRAM CLK enable enable timer |

DMC_DRAM_DFITLPRESP 0x002a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 3:0 | | | dfi_lp_ctrl_req response time. after dfi_lp_ctrl_req asserted, and after response time if there's still no dfi_lp_ack response, then drop the dfi_lp_ctrl_req. |

DMC_DRAM_DFITPHYMSTR 0x002b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 15 | | | 1: enable DFIPHYMASTER INTERFACE 0 disable DFIPHYMSTR en response. always 0 we would use DFI_RETRAIN function for PHY retrain required from LPDDR4. |

DMC_DRAM_TCKECK 0x002c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 4:0 | | | tCKECK from CKE low to assert dfi_dram_clk_disable time. this time + dfi_t_ctrl_delay |

DMC_DRAM_TREFI 0x002d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:24 | | | tZQCl dmc send zqci period. unit is how much auto refresh period. |
| 23:16 | | | pvti dmc send dfi_ctrlupd_req period. unit is one auto refresh period. |
| 15:8 | | | tREFI.dmc send auto refresh command period. unit is 100ns. |
| 7:0 | | | t100ns period. unit is dmc clock cycles |

DMC_DRAM_TSR 0x002e

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------------|
| 5:0 | | | tSR. self refresh enter to exit time. |

DMC_DRAM_TCCDMW 0x002f

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------------|
| 5:0 | | | 4*tCCD in LPDDR4 mask write. |

DMC_DRAM_TESCKE 0x0030

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 5:0 | | | tESCKE. enter self refresh to power time for LPDDR4. |

DMC_DRAM_TREFI_DDR3 0x0031

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 7:0 | | | 8*DDR3 SDRAM tREFI time . the unit is t100ns. use this to check in 8*tREFI time, the DMC should sent more than 16 auto REFRESH command. |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 12 | | | rank1 ODT default. default value for ODT[1] pins if there's no read/write activity. |
| 11 | | | rank1 ODT write sel. enable ODT[1] if there's write occur in rank1. |
| 10 | | | rank1 ODT write nsel. enable ODT[1] if there's write occur in rank0. |
| 9 | | | rank1 odt read sel. enable ODT[1] if there's read occur in rank1. |
| 8 | | | rank1 odt read nsel. enable ODT[1] if there's read occur in rank0. |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 4 | | | rank0 ODT default. default value for ODT[0] pins if there's no read/write activity. |
| 3 | | | rank0 ODT write sel. enable ODT[0] if there's write occur in rank0. |
| 2 | | | rank0 ODT write nsel. enable ODT[0] if there's write occur in rank1. |
| 1 | | | rank0 odt read sel. enable ODT[0] if there's read occur in rank0. |
| 0 | | | rank0 odt read nsel. enable ODT[0] if there's read occur in rank1. |

DMC_DRAM_DFIODTCFG1 0x0085

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 27:24 | | | ODT length for BL8 read transfer. |
| 19:16 | | | ODT length for BL8 write transfer. |
| 12:8. | | | ODT latency for reads. suppose to be 0. |
| 4:0. | | | ODT latency for writes. suppose to be 0 |

DMC_DRAM_MCFG 0x0086

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 12 | | | 1: dbi inversion. 0: dbi high inversion. |
| 11 | | | 1: dbi read enable. 0: dbi not enabled. |
| 10 | | | 1: enable staggered chip select for 2 ranks DRAM. |
| 9 | | | 1: enable send auto refresh command to DDR SDRAM when PCTL is in CFG/STOP state. |
| 8 | | | send auto refr cmd before enter register triggered self refresh |
| 4 | | | send auto refr cmd after exit register triggered self refresh mode. |
| 3 | | | disable dram clock after enter register triggered self refresh. |
| 2 | | | send DFI_LP_REQ to PHY after enter register triggered self refresh mode. |
| 1 | | | send DRAM to power down mode after enter self refresh. ONLY for LPDDR4. |
| 0 | | | send DFI_CTRLUPD_REQ after exit register triggered self refresh. |

DMC_DRAM_DFI_CTRL 0x0089

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------|
| 20 | | | siu_dfi1_phymstr_ack_en |
| 19 | | | siu_dfi_phymstr_req_and |

| | | | |
|----|--|--|--------------------------|
| 18 | | | siu_dfi_phymstr_req_or |
| 17 | | | siu_dfi_phymstr_type_sel |
| 16 | | | siu_dfi_phymstr_cs_sel |
| 15 | | | siu_dfi1_lp_en |

| 5 | | | siu_dfi_phyupd_req_and |
| 4 | | | siu_dfi_phyupd_req_or |
| 3 | | | siu_dfi_ctrlupd_ack_and |
| 2 | | | siu_dfi_ctrlupd_ack_or |
| 1 | | | siu_dfi1_ctrlupd_req_en |
| 0 | | | siu_dfi1_cmd_en |

DMC_DRAM_DFIINITCFG 0x008a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31. | | | dfi_init_complete status. read only. |
| 15:14 | | | Frequency set 1 dfi_freq_ratio value. |
| 12:8 | | | Frequency set 1 dfi_freq value. |
| 7:6 | | | Frequency set 0 dfi_freq_ratio value. |
| 5:1 | | | Frequency set 0 dfi_freq value. |
| 0. | | | dfi_init_start value can be use manually config dfi_init_start signal. |

DMC_DRAM_ZQ_CTRL 0x008b

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 2 | | | send ZQCS command to RANK0 then send comand to RANK1. |

| | | | |
|---|--|--|---|
| 1 | | | send ZQCS command to both RANK0 and RANK1 together. |
| 0 | | | send ZQCS command to only rank0. |

DMC_DRAM_APD_CTRL 0x008c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 19:16 | | | DFI_LP_WAKEUP value in APD DFI_LP_REQ mode |
| 12 | | | 1: exit power down slow mode(waiting PLL LOCK). 0 : fast mode. |
| 11 | | | enable DFI_LP_REQ when enter Auto power down mode. |
| 10 | | | disable DFI_clk_disable when enter auto power down mode. |

DMC_DRAM_ASR_CTRL 0x008d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 23:20 | | | DFI_LP_WAKEUP value in self refresh DFI_LP_REQ mode. |
| 17 | | | send REFRESH command after exit from auto self refresh mode(ASR). |
| 16 | | | send REFERSH command before enter to Auto self refresh mode(ASR). |
| 15 | | | send ZQCS command after exit from Auto self refresh mode(ASR). |
| 14 | | | send dfi_ctrl_upd after exit from ASR mode |
| 13 | | | send power down command when enter ASR mode. //for LPDDR4 only. |
| 12 | | | set the PHY enter LP2 mode after enter ASR mode. |
| 11 | | | send DFI_LP_REQ after enter ASR mode. |
| 10 | | | set DFI_CLK_DISABLE after enter ASR mode. |
| 9:0 | | | 0 disable auto ASR mode. |

DMC_DRAM_PHYMSTR_CTRL 0x0090

Not used.

DMC_DRAM_DFIODTRANKMAP 0x0091

Not used.

DMC_DRAM_REFR_CTRL 0x0092

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 17:8 | | | auto refresh request pending cnt if there's page hit request. |
| 6 | | | Disabled auto refresh command if over 16 auto refresh command sent in 2 TREFI_DDR3 period |
| 5 | | | enable dmc send ZQCS command . |

| | | | |
|-----|--|--|---|
| 4. | | | enable dmc send DFI_CTRUPD_REQ. |
| 3:1 | | | how many refresh command send for one period. = this number + 1 |
| 0 | | | enable dmc send auto refresh command. |

DMC_DRAM_FREQ_CTRL 0x0093

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 . | | | Wiret 1 to change frequency read 0: finished. |
| 30:9 | | | Not used. |
| 9. | | | 1 : FREQ MRW done. Let FREQ change machine continue. |
| 8 | | | Freq wait. 1 when freq change finishes, state machine stop at self refresh state in case there's something need to handle. |
| | | | // 0 after freq change finishes the state machine go back to access state. |
| 7 | | | When change PLL setting, disable dmc clock |
| 6 | | | When change PLL setting, disable PHY dficlck and dfictlck. |
| 5 | | | Check vpu_sleep_en ==1 when do FREQ change. If vpu_sleep_en == 0, just wait. |
| 4 | | | Nxt frequency selection. 1 = freq1. 0 = freq0. |
| 3:1. | | | Not used. |
| 0. | | | Current frequency selection. |

DMC_DRAM_SCFG 0x0094

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 2:0 | | | only one bit can be high at same time. |
| 2 | | | 1 : to ask PCTL enter ACCESS STATE. 0 : deassert the request. |
| 1 | | | 1 : to ask PCTL enter SELF REFRESH STATE. 0 : deassert the request. |
| 0 | | | 1 : to ask PCTL enter STOP/CONFIG STATE . 0 : deassert the request. |

DMC_DRAM_STAT 0x0095

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 27:23 | | | dram_sr_state |
| 22:20 | | | stop_st |
| 19:15 | | | sleep_st |
| 14:12 | | | ACCESS STATUS 0 : ACCESS is in normal working mode. 1 : ACCESS sending precharege command. 2 : ACCESS sending AUTO REFESH command. |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| | | | 3 : ACCESS sending DIF_CTRLUPD_REQ command. 4 : ACCESS sending ZQCS command to DDR DRAM(ZQCAL for LPDDR4). 5 : ACCESS sending ZQLATCH command to LPDDR4 only. |
| 11:8 | | | APD STATUS: 0 : APD_IDLE 1 : APD sending PRECHARGE command 2 : APD sending CKE low command 3 : APD sending DISABLE DRAM CLOCK command 4 : APD sending DFI_LP_CTRL_REQ 5 : APD in Auto Power down mode. 6 : APD deassert DFI_LP_CTRL_REQ 7 : APD sending enable DRAM CLOCK command 8 : APD sending out CKE high command. |
| 7:4 | | | DRAM_STATUS: 0 : DRAM_IDLE 1 : DRAM_STOP/DRAM_CFG 2 : DRAM_ACCESS 3 : DRAM_SLEEP 4 : DRAM APD(AUTO POWER DOWN). 5 : IDLE -> STOP/CONFIG 6 : STOP -> SLEEP 7 : STOP -> ACCESS 8 : ACCESS -> SLEEP. 9 : ACCESS -> STOP A : ACCESS -> APD B : SLEEP -> STOP C : SLEEP -> ACCESS D : APD -> ACCESS |
| 3 | | | Reserved. |
| 2 | | | 1 : DRAM enter normal working state. |
| 1 | | | 1 : DRAM enter sleep state. self refresh state. |
| 0 | | | 1 : dram enter cfg state. |

DMC_DRAM_STAT1 0x0096

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 11:8 | | | freq_st. |
| 7:5 | | | train_st |
| 4:0 | | | dram_phy_st |

DMC_PHY_RETRAINING_CTRL 0x0097

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------|
| 31 | | | phy_retraining enable. |
| 30 | | | check vpu sleep_en. |
| 23:0 | | | retraining period unit : 100ns. |

DMC_DFI_ERR_STAT 0x0098

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|----------------------|
| 31:20 | | | not used. |
| 9 | | | ddr0_dfi_error |
| 8:5 | | | ddr0_dfi_error_info. |
| 4 | | | ddr1_dfi_error. |
| 3:0 | | | ddr1_dfi_error_info. |

DMC_DRAM_MRW_CTRL 0x0099

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | | | write 1 to initial a MRW command read 0 finished. |
| 23:16 | | | MR addr. DDR4 case : 18:16 ba[2:0]. 29:19 BG[1:0]. |
| 15:0 | | | opcode. |

DMC_DRAM_DFI_SWAP_0 0x00a0

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------|
| 5:0 | | | dfi_act_n function select |

DMC_DRAM_DFI_SWAP_1 0x00a1

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------|
| 5:0 | | | dfi_ras_n function select |

DMC_DRAM_DFI_SWAP_2 0x00a2

| Bit(s) | R/W | Default | Description |

13.2 NAND

13.2.1 Overview

A311D supports SLC/MLC/TLC NAND Flash with 60-bit ECC.

13.2.2 Descriptor Commands

Command “Standby”

All CEs are high, all other signals are “don't care”, the bits [9:0] specify how many extra NAND cycles the controller stays in “standby”, if the number is “0”, only one NAND cycle, if the number is 10, the controller will stay in “standby” for 11 NAND cycles.

Command “Idle”

CE is low, ALE and CLE is low, WE and RE is high, the NAND bus is taken over by controller, but the bus is let to idle for one NAND cycle, if extra NAND cycles number is set, then extra NAND cycles is idled, useful when NAND controller needs time to switch to another mode, or wait for RB.

Command “Command”

NAND command is sent, CE is low, ALE is low, CLE is high, WE is low and RE is high, usually only one NAND CE is low, all the other 3 should be high, otherwise the NAND command is accepted by multiple Dies and may cause conflict problem, but it is fine when used to reset the NAND, the command itself is sent by bit 7 to bit 0, one command sends one NAND command.

Command “Address”

NAND address cycle, the CE is low, ALE is high, CLE is low, WE is low and RE is high. Usually only one NAND CE is low, all the other 3 CEs should be high. The address is sent in the bit 7 to bit 0, it lasts one NAND cycle.

Command “Data to NAND”

Write NAND bus directly by this command, CE is low, ALE and CLE are low, WE is low and RE is high, the low bit7 to bit 0 is write to NAND flash when this command is done, it lasts one NAND command cycle. Usually used to program NAND features, it is very low efficient to program NAND by this command, could be used to debug NAND flash software.

Command “NAND to Data”

Read NAND bus and save the data to registers, CE is low, ALE and CLE are low, WE is high and RE is low, the NAND output is locked in registers at perfect timing, the extra NAND cycles will make this command repeats extra NAND cycle, if it is “0”, only one byte is locked in registers, since the registers used to lock the data is only 32 bits, extra NAND cycles number larger than 3 will cause the data overflow. This command is used to read status and features from NAND, not for read NAND data, it is very low efficient to read NAND by this command, it could be used to debug NAND software.

Command “Sync Read”

Same as “NAND to Data”, used in synchronous mode, each NAND cycle will read in two bytes in synchronous mode.

Command “RB pin”

Hardware ready/busy detect with timer and interrupt, the timer is bit 4 to bit 0, it is power of 2 NAND cycle, for example, if timer is set to 10, then 2^{10} or 1024 NAND cycles is set to timer out the RB command. The maximum setting is 31, that is 2^{31} NAND cycles. Or 42 seconds when NAND cycle is 20 ns. When the RB waiting is timed out, the hardware is still in “waiting”, an interrupt is sent to CPU, the “RB” command can be programmed to send out interrupt when RB is high when the correspond INT bits is set to high, once RB is high, the command queue advanced to next command, no matter interrupt or not, interrupt setting is “one time setting”, it means one RB command can be programmed with interrupt, the next can be programmed without interrupt. There are few bits in the RB command for software debugging purpose.

it can be set to different numbers to tell which RB command is interrupted. CPU can read out the NAND status registers to tell which RB causes interrupt.

Command “RB IO”

assume the NAND controller is used without ready/busy pin, the ready/busy is checked through status register, This command should be used with NAND read status command, like the old RB command, this command is designed with option to check which IO bits as ready/busy, “IO6”, “IO5” and “IO4”, and “INT6”, “INT5” and “INT4” to issue “IRQ” if “Ready”, time out logic is the same as old RB, in case of “Read” NAND, an extra “0x00” command is needed to switch NAND flash back to “Read” mode.

The RB IO command is associated with CE state, there is no CE option in RB IO command, valid CE from previous command is used.

NAND status is checked every 16 NAND cycles, if not ready when time out, an “IRQ” is issued and timer is reset.

Change to read status mode.

Set proper timer out parameter.

Monitor which IO bits, IO6, IO5 or IO4.

Set IRQ option, set NAND_CFG cmd_irq_en bit.

Return back to read mode if needed.

Command “MEM to NAND”

DMA command to send data from memory to NAND, this command consist of ECC mode, the data is read from DDR memory by NAND controller at 64 bits/system cycle, BCH encoded by hardware and sent to NAND in the fly. The NAND data address can be programmed by register or command “set address”.

The data size can be any number, if ECC is off, the exact number of data bytes are read from DDR memory and sent to NAND without ECC encode, if ECC is on, and final page is not 512 bytes, then “0xff” is appended to the data to make it 512 bytes and send to BCH encoded and send to NAND.

When ECC is off, no spare data bytes are read from DDR, the data is sent exactly the same as DDR. When ECC is on, 2/16/0 bytes of spare bytes are read from DDR and appended to 512/1024 main data, encoded and parity bytes all sent to NAND.

The final BCH code word is rounded to integer number of bytes, see BCH table.

If ECC is OFF, the command writes [13:0] number of bytes to NAND.

If ECC is ON, the command writes “pages” of bytes to NAND.

If “short” is 0, the page size is BCH code data size, 512 or 1024.

If “short” is 1, shortened BCH mode, the page size is “page size”*8 bytes.

The number of pages is up to 63.

Data randomization option, if cmd[19] is set to “1” and the random seed is not equal to “0”, the data and parity written to NAND is randomized with PRBS random number, the same seed must be used to read the page back.

Random seed is set by command “Seed” cmd[14:0], suggest to use NAND physical address as “seed”.

Command “NAND to MEM”

DMA command to read data from NAND and save to DDR, this command consist of ECC mode, and data size, this command will correct the data by hardware and save the decode result information to DDR too. The data address in DDR is programmed by “set address” command, if not programmed the address increases to next available data space.

When ECC is off, the data is save to DDR without change, the information bytes is also saved in DDR with ECC mode bits off, no spare bytes, when ECC is on, the data is BCH decoded and corrected by hardware,

if the data size is less than 512/1024, more data will be read out from NAND, but only the required number of bytes are sent to DDR.

If ECC is OFF, the command reads [13:0] number of bytes from NAND.

If ECC is ON, the command reads “pages” of bytes to NAND.

If “short” is 0, the page size is BCH code data size, 512 or 1024.

If “short” is 1, shortened BCH mode, the page size is “page size”*8 bytes.

The number of pages is up to 63.

Data randomization option is the same as “MEM to NAND”.

Command “Set Address”

DDR address setup command, used to change the memory address when read or write NAND, the D/S bits is for data or spare, “0” for data, “1” for spare, L/H is for low and high 16 bits of address, “0” for low 16 bits, “1” for high 16 bits, the DDR address is 32 bits.

This command has nothing to do with NAND bus, but it will take one NAND command to execute, one NAND idle command is used in time.

| Mode | Cmd[18:17] | Description |
|--------|------------|--------------------|
| Data | 00 | Set Data Address |
| Info | 01 | Set Info Address |
| Status | 10 | Set Status Address |

Command “STS”

Read status and save to DDR memory, the status registers is 32 bits, with

| Field | Name | Description |
|-------|-------------|-----------------------|
| 15:0 | Sts | Status |
| 23:16 | Sts counter | Sequence number |
| 31 | Done | This status is valid. |

STS 1: read status once, without IRQ.

STS 2: read status twice, with IRQ.

If NAND_CFG[20] Sts_irq_en is set to “1”, the STS 2 command will issue an IRQ to system, if used after NAND read command “N2M”, it guarantees the DMA is done. Because the STS itself is a DMA command, it will wait till the previous DMA command done before its DMA.

STS 2 command resets the sequence number, the sequence number in itself is the number of STS 1’s before IRQ, wrap around to 8 bits.

Command “Set Seed”

Random seed for data randomizer, any number except 0 starts random number generator, if “N2M” or “M2N” random bit is set, the random number is XORed with data.

Set none zero random seed, in cmd[14:0].

Set cmd[19] of “N2M” or “M2N” to 1, enable scrambler.

Use same seed to program/read the same NAND page.

13.2.3 Register Definitions

The base address of NAND registers is 0xffe07000, and the final address of each register is listed below:

Table 13-1 NAND Register List

| Register Name | Description | Address | R/W |
|---------------|-------------------------------|-------------|-----|
| P_NAND_CMD | Write Command and Read Status | Base + 0x00 | R/W |
| P_NAND_CFG | Configuration | Base + 0x04 | R/W |
| P_NAND_DADR | Data Address | Base + 0x08 | R/W |
| P_NAND_IADR | Information Address | Base + 0x0c | R/W |
| P_NAND_BUF | Read Data Buffer | Base + 0x10 | R |
| P_NAND_INFO | Information | Base + 0x14 | R |
| P_NAND_DC | DDR interface | Base + 0x18 | R |
| P_NAND_ADR | DDR Address | Base + 0x1c | R |
| P_NAND_DL | DDR Low 32 Bits Data | Base + 0x20 | R/W |
| P_NAND_DH | DDR High 32 Bits Data | Base + 0x24 | R/W |
| P_NAND_CADR | Command Queue Address | Base + 0x28 | R/W |
| P_NAND_SADR | Status Address | Base + 0x2c | R/W |
| P_NAND_PINS | CS2: SDRAM/NAND pin sharing | Base + 0x30 | R/W |
| P_NAND_VER | Version number | Base + 0x38 | R |

P_NAND_CMD

Write : Send NAND command to controller, the command format is specified in previous section.

| Bit(s) | Name | Description |
|--------|-----------|--|
| 21:0 | Cmd | NAND command sent to NAND queue buffer |
| 30 | Cmd_go | When 1, and NAND bus is in waiting Rb mode, due to time out or longer than expected Rb waiting, the command queue will move on by disable RB waiting in current command. |
| 31 | Cmd_reset | When 1 the NAND command queue buffer is reset to zero. |

Read : Read NAND controller status

| Bit(s) | Name | Description |
|--------|-----------|--|
| 19:0 | Cmd_curr | NAND command current on NAND bus, still going, not finished. |
| 24:20 | Cmd_cnt | Number of NAND commands still in NAND command queue buffer, the buffer size is 32. |
| 25 | Timer out | When 1 wait Rb command timed out. |

| | | |
|----|---------|---|
| 26 | Rb0 | Current Rb0 status, 1: ready, 0: busy. |
| 27 | Rb1 | Current Rb1 status, 1: ready, 0: busy. |
| 28 | Rb2 | Current Rb2 status, 1: ready, 0: busy. |
| 29 | Rb3 | Current Rb3 status, 1: ready, 0: busy. |
| 30 | Mem_rdy | When 1, DDR interface is idle and ready to accept memory movement request. |
| 31 | Ecc_rdy | When 1, ECC BCH encoder/decoder is idle and read to accept encode or decode activity. |

P_NAND_CFG

| Bit(s) | Name | Description |
|--------|------------|--|
| 4:0 | Bus_cyc | The number of system clock cycles in one NAND cycle – 1, for example, if the bus_cyc is 3, then the NAND cycle is 4 system clock cycles, the minimum setting is 3, the maximum setting is 31. program this register according NAND timing mode. |
| 9:5 | Bus_tim | The timing to lock the NAND data when read NAND data or status, please refer to “Timing Calculator” for details. |
| 11:10 | Sync | 00: Async mode 01: Micron Sync mode 10: Toshiba-Samsung toggle mode |
| 12 | Cmd_start | When set to “1”, if the NAND controller internal 32 command buffer has less than 16 commands, the command DMA starts reading commands from DDR and saves them to internal buffer, the DMA keeps watching the internal buffer, reads whenever there are less than 16 commands left, if an all “zero” command is met, This bit is cleared and current command DMA is done. |
| 13 | Cmd_auto | When set to ‘1’, the command DMA will check the previous command queue end location, whether it is changed from all “zero” back to valid command, the auto check period is 1 ms. |
| 14 | Apb_mode | Special NAND mode for ROM boot or debug, when 1, DDR interface is redirected to APB register, all the read/write activities are through APB registers. When used in ROM boot and DDR is not ready. |
| 15 | Spare_only | When 1, the NAND controller read NAND with/without ECC, but only save the information bytes into DDR memory, the main data is discarded, designed for software to survey the NAND flash spare bytes and prepare NAND programming. |
| 16 | Sync_adj | Used to adjust data timing in sync or toggle mode, 0: default timing, 1: delay 1 system clock cycle. |
| 20 | Sts_irq_en | Enable STS IRQ. |
| 21 | Cmd_irq_en | Enable RB pin or RB IO IRQ. |
| 26 | Oob_on | Set to 1 oob_mode 16/0, Set to 0 no oob bytes. |
| 27 | Oob_mode | New in M8 v2, Set to 1 enable new oob mode. First page 16 bytes, all other pages 0 byte. |

| Bit(s) | Name | Description |
|--------|------------|--|
| 28 | Dc_ugt | Set NAND controller DDR interface to Urgent mode. |
| 29 | Nand_wpn | When 1, the NAND wpn pin is set to low, the NAND is in write protection mode, default to 0, the NAND is not protected. |
| 30 | Core_power | When 1, internal NAND controller core clock gating is override to always on. The clock gating is disabled. |
| 31 | Top_power | When 1, internal NAND top clock gating is override to always on, the clock gating for top is disabled. |

P_NAND_DADR

Set DDR data address by registers, the address is 32 Bits, since the DDR data address can also be set by NAND commands, when both happens at the same time, register setting is ignored, the NAND command setting takes effect. Software should avoid conflict address setting.

P_NAND_IADR

Set DDR information (spare bytes) address by registers, the address is 32 Bits, since the DDR information address can also be set by NAND commands, when both happens at the same time, register setting is ignored, the NAND command setting takes effect. Software should avoid conflict address setting.

P_NAND_BUF

When read NAND status, features or data, the results are buffer in this register, the register is 32 Bits, it can only hold 4 bytes, if the host not doesn't read out the results, it will be over written by the following "read".

P_NAND_INFO

One 32 Bits information per each 512 bytes in ECC mode.

| Bit(s) | Name | Description |
|--------|--------|---|
| 7:0 | Info 0 | Information (spare) byte 0, errors already corrected by BCH. |
| 15:8 | Info 1 | Information (spare) byte 1, errors already corrected by BCH |
| 21:16 | Pages | Count down page number in current DMA read, starts from the total page size, count down to 1. |
| 28:24 | Errcnt | Number of errors corrected by BCH in current page, 0 means no error in current page, 0x1f means this page is uncorrectable. |
| 29 | Unc | When 1, this page is uncorrectable by BCH, this page is bad. |
| 30 | Ecc | When 1, current NAND read is with ECC on. |
| 31 | Done | When 1, the information content and data read from NAND are valid, otherwise the "read" is not done. |

P_NAND_DC

Used for apb_mode, internal NAND controller still uses DDR interface, only the DDR request and DDR grant are redirected from DDR to apb registers, this enables the host to read NAND without DDR, for ROM boot and debug.

| Bit(s) | Name | Description |
|--------|----------|---|
| 7:0 | Dc_wr_dm | DDR write data mask, Each Bit masks one byte. |
| 8 | Dc_wr | When 1, write data from NAND to DDR. When 0, read data from DDR to NAND. |
| 9 | Dc_lbrst | When 1, the 64 Bits data is the last in current DDR burst, used with Dc_req. |
| 10 | Dc_ugt | When 1, current DDR request of read/write is urgent, in NAND controller, the Dc_ugt is set to 0, none-urgent. |
| 11 | Dc_req | When 1, the NAND controller send request to DDR to read or write data, in case of apb_mode, when dc_req is "1", the host is responsible for send to or receive from NAND controller. Note: this is the only signal the host needs to check when in apb_mode. |

P_NAND_ADR

32 Bits DDR address when NAND controller read or write to DDR memory, any address space within the DDR memory installed in the system is valid.

P_NAND_DL

The DDR interface uses 64 Bits width bus, this register is for low 32 Bits, [31:0].

P_NAND_DH

The DDR interface uses 64 Bits width bus, this register is for high 32 Bits, [63:32].

Read and write to this register will generate "grant" and "dc_wr_avail" or "dc_rd_avail".

Always read or write low 32 Bits first, then read or write to high 32 Bits and NAND controller hardware will generate "grant" and "dc_wr_avail" or "dc_rd_avail", combined with the data, the DDR address advances to next address.

NAND controller programs NAND flash in apb_mode:

- Check P_NAND_DC till "dc_req" is high.
- Write low 32 Bits to P_NAND_DL.
- Write high 32 Bits to P_NAND_DH.
- Go back to beginning till all the data is written.

NAND controller reads data from NAND flash in apb_mode:

- Check P_NAND_DC till "dc_req" is high.
- Read low 32 Bits from P_NAND_DL.
- Read high 32 Bits from P_NAND_DH.
- Go back to beginning till all the data is read.

Since the DDR interface in NAND controller process the data in group of 16 double words (64 Bits), the software can only check "dc_req" at the beginning of each 16 double words.

P_NAND_CADR

Set command queue memory address, 32 Bits, any memory location.

This address can only be programmed by APB bus.

P_NAND_SADR

Set status memory location, 32 Bits, any memory location.

This address can also be programmed through command queue.

P_NAND_PINS

| Bit(s) | Name | Description |
|--------|------------|--|
| 13:0 | Pins_len | When pins are acquired by NAND, it will use Pins_len number of NAND bus cycles before releasing pins. Default is 8. |
| 27:14 | Pins_off | When pins are released by NAND, it will wait Pins_off number of NAND bus cycles before sending next request. Default is 2. |
| 31 | Not shared | When 1 the pins is not shared, default is 0, pins are shared. |

13.3 eMMC/SD

13.3.1 Overview

A311D has the following features of eMMC/SD

- Supports SDSC/SDHC/SDXC card
- Supports eMMC and MMC card specification version 5.0 up to HS400 with data content DES crypto
- 1 bit, 4 Bits, 8 Bits data lines supported (8 Bits only for MMC)
- Descriptor chain architecture, timing tuning and adjustment
- Supports descriptor-based internal DMA controller

This module uses eMMC/SD CONTROLLERS to connect varied SD/MMC Card, or eMMC protocol compatible memory with high throughput.

13.3.2 PinDescription

Table 13-2 PinDescription of eMMC/SD/SDIO Module

| Name | Type | Description | Speed (MHz) |
|----------|--|--|-------------|
| CLK | Output | SD eMMC clock, 0~200MHz | 200 |
| DS | Reserverd | - | - |
| DAT[7:0] | SD Card 4 Bits, eMMC 8 Bits Input/Output/Push-Pull Internal pull-up for pins not used | Data, 1,4,8 mode | 200 |
| CMD | Input/Output/Push-Pull/Open-Drain Open-drain for initialization Push-pull for fast command transfer ROD is connected when in open-drain mode. | Command Response | 100 |
| Rst_n | eMMC required | Hardware reset | Low |
| IRQ | SD Card or eMMC not used. | Device interrupt can be replaced by DAT[1] | Low |

13.3.3 eMMC/SD Mode

eMMC Mode:

Table 13-3 eMMC Mode

| Mode Name | Data Rate | IO Voltage | Bus Width | Frequency | Max Data Transfer |
|-----------------|-----------|------------|-----------|-----------|-------------------|
| Legacy MMC card | Single | 3/1.8V | 1, 4, 8 | 0-26MHz | 26MB/s |
| High Speed SDR | Single | 3/1.8V | 1,4, 8 | 0-52MHz | 52MB/s |
| High Speed DDR | Dual | 3/1.8V | 4, 8 | 0-52MHz | 104MB/s |

| Mode Name | Data Rate | IO Voltage | Bus Width | Frequency | Max Data Transfer |
|-----------|-----------|------------|-----------|-----------|-------------------|
| HS200 | Single | 1.8V | 4, 8 | 0-200MHz | 200MB/s |

The HS200 mode offers the following features:

- SDR Data sampling method
- CLK frequency up to 200MHz Data rate – up to 200MB/s
- 4 or 8-bits bus width supported
- Signaling levels of 1.8V
- Tuning concept for Read Operations

SD Mode:

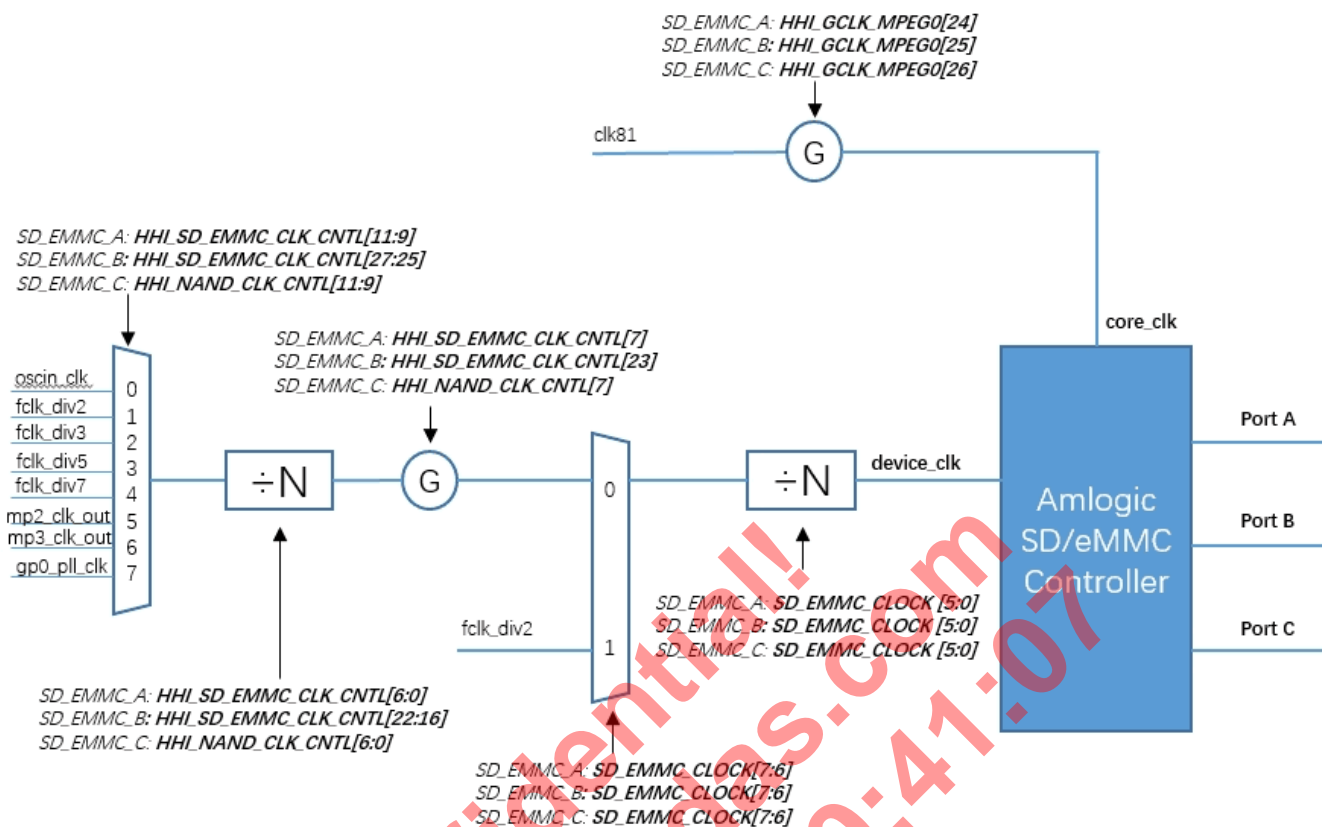

Table 13-4 SD Mode

| Mode Name | Data Rate | IO Voltage | Bus Width | Frequency | Max Data Transfer |
|------------------|-----------|------------|-----------|-----------|-------------------|
| Default Speed | Single | 3.3V | 1, 4 | 0-25MHz | 12.5MB/s |
| High Speed | Single | 3.3V | 1, 4 | 0-50MHz | 25MB/s |
| SDR12 | Single | 1.8V | 1,4 | 0-25MHz | 12.5MB/s |
| SDR25 | Single | 1.8V | 1,4 | 0-50MHz | 25MB/s |
| SDR50 | Single | 1.8V | 1,4 | 0-100MHz | 50MB/s |
| SDR104 (highest) | Single | 1.8V | 1,4 | 0-208MHz | 104MB/s |
| DDR50 | Dual | 1.8V | 4 | 0-50MHz | 50MB/s |

13.3.4 Clock

In A311D, clock source has the options to select from the figure below.

Figure 13-2 EMMC Clock Diagram

13.3.5 Descriptor

13.3.5.1 Descriptor Structure

The descriptor has a size of 4x32 Bits.

Table 13-5 Descriptor Structure

| byte | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|------|--|----------|------------------|------------|--------------|---------|------------|-----------|
| 0 | length[7:0] | | | | | | | |
| 1 | Timeout 4 Bits | | | | End of chain | R1b | block mode | length[8] |
| 2 | data num | resp num | resp 128 | resp nocrc | Data wr | Data io | No cmd | No resp |
| 3 | owner | error | cmd index 6 Bits | | | | | |
| 4 | cmd argument 32 Bits | | | | | | | |
| 5 | | | | | | | | |
| 6 | | | | | | | | |
| 7 | | | | | | | | |
| 8 | data address 32 Bits or data 0-4 bytes | | | | | | | |
| 9 | [1]Big Endian, [0]SRAM | | | | | | | |

| byte | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|------|--|---|---|---|---|---|---|---|
| 10 | response address 32 Bits or response irq en [0]SRAM | | | | | | | |
| 11 | | | | | | | | |
| 12 | | | | | | | | |
| 13 | | | | | | | | |
| 14 | | | | | | | | |
| 15 | | | | | | | | |
| | | | | | | | | |

13.3.5.2 Descriptor Definition

Table 13-6 Descriptor Definition

| Name | Bits | Description |
|--------------|----------------|---|
| Length | Cmd_cfg[8:0] | same as spec, copy the content from command argument into this field, different byte size and 512 bytes, different number of blocks and infinite blocks. If the command is operating on bytes, block mode = 0, this field contains the number of bytes to read or write. A value of 0 shall cause 512 bytes to be read to written, if the command is operating on blocks, block mode = 1, this field contains the number of blocks, a value of 0 is infinite number of blocks. |
| Block_mode | Cmd_cfg[9] | 1: the read or write shall be performed on block basis. The block size is from SD/eMMC device, and saved in APB3 register in module. 0: the read or write is byte based. |
| R1b | Cmd_cfg[10] | 1: check the DAT0 busy after received response R1 0: do not check the DAT0 busy state. |
| End_of_chain | Cmd_cfg[11] | 1: it is the end of descriptor chain, the host stops and issues IRQ after this descriptor is done. 0: the host reads next descriptor and continues. The command chain execution is started by write an APB3 register and stopped by the "end of chain" or clear a APB3 start register, or found one descriptor with owner is set to 0. |
| Timeout | Cmd_cfg[15:12] | 2timeout ms when timeout != 0, max timeout 32.768s, when over the timeout limit, error bit is set, IRQ is issued. When timeout is 0, no time limit. |
| No_resp | Cmd_cfg[16] | 1: this command doesn't have response, used with command doesn't have response. 0: there is a response. The module waits for response, the response timeout setting is in APB3 register. |
| No_cmd | Cmd_cfg[17] | 1: this descriptor doesn't have command in it, it does data DMA only, used with command to read or write SD/eMMC with data from multiple locations. |
| Data_io | Cmd_cfg[18] | 1: there is data action in this descriptor, used with command have data process. 0: there is no data read/write action. |

| Name | Bits | Description |
|------------|--------------------|---|
| Data_wr | Cmd_cfg[19] | 1: host writes data to SD/eMMC 0: host read data from SD/eMMC |
| Resp_nocrc | Cmd_cfg[20] | 1: R3 response doesn't have CRC. 0: host does CRC check. |
| Resp_128 | Cmd_cfg[21] | 1: R3 response with 128 Bits information. 0: 32 Bits responses. |
| Resp_num | Cmd_cfg[22] | 1: the resp_addr is the IRQ enable Bits, used to check the response error status, when there is an error, IRQ[14] is issued, the first 4 bytes of response is saved into resp_addr. 0: save response into SRAM or DDR location. |
| Data_num | Cmd_cfg[23] | 1: save 4 bytes of data back into descriptor itself at bytes 8~11. |
| Cmd_index | Cmd_cfg[29:24] | The SD/eMMC command index. Desc REG wr: 4 reg44, 12 reg4c. |
| Error | Cmd_cfg[30] | Write back by host. The combined error from command, response, data, includes CRC error and timeout. When it is set the descriptor execution is stopped and an IRQ is issued. The CPU can read SD_EMMC_STATUS register to get detail information. |
| Owner | Cmd_cfg[31] | Programmed by CPU to 1, cleared by host to 0. 1: the descriptor is valid and owned by host, after it is done, even it has error, the owner bit is cleared, the descriptor is owned by CPU. In case of descriptor chain execution when host found a descriptor with "0" owner bit, it will stop. |
| Cmd_arg | Desc 4~7 bytes | 32 Bits. The actual command argument some of the previous fields are copied from this command argument, the software need to make sure they are consistent. Desc REG wr: new value Data_addr: write mask, 1: change, 0: no change. |
| Data_addr | Desc 8~11 bytes | 32 Bits. If the data_num is 0, the content is data address. If the data_num is 1, ths content is 4 data bytes. When it is an address: Data_addr[0]: 1: SRAM address, 0: DDR address. If the data_addr[31:12] matches with SD_EMMC_BASE, it is SRAM address. Data_addr[1]: 1: 4 bytes big endian, 0: little endian(default). |

| Name | Bits | Description |
|-----------|---------------------|--|
| Resp_addr | Desc 12~15 bytes | 32 Bits If the resp_num is 0, the content is resp address. If the resp_num is 1, before execution, it is the response IRQ enable Bits, after execution, it is the first 4 response bytes. When it is an address: Resp_addr[0]: 1: SRAM address, 0: DDR address. If the resp_addr[31:12] matches with SD_EMMC_BASE, it is SRAM address. |

13.3.6 RegisterDescription

Each register final address = module base address+ address * 4

Where module address addresses are 0xFFE07000 for portB(eMMC), 0xFFE05000 for port C (eMMC).

SD_EMMC_CLOCK 0x0

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 30 | R/W | 0 | Cfg_irq_sdio_sleep_ds : 1: select DS as IRQ source during sleep. |
| 29 | R/W | 0 | Cfg_irq_sdio_sleep: 1: enable IRQ sdio when in sleep mode. When DAT1 IRQ, the controller uses PCLK to detect DAT1 level and starts core clock, the core initials IRQ_period and detect DAT1 IRQ. |
| 28 | R/W | 0 | Cfg_always_on: 1: Keep clock always on 0: Clock on/off controlled by activities. Any APB3 access or descriptor execution will turn clock on. Recommended value: 0 |
| 27:22 | R/W | 0 | Cfg_rx_delay: RX clock delay line, 6 bits 0: no delay, n: delay n*50ps Maximum delay 3150ps. |
| 21:16 | R/W | 0 | Cfg_tx_delay: TX clock delay line, 6 bits 0: no delay, n: delay n*50ps Maximum delay 63*50ps =3150ps. |
| 15:14 | R/W | 0 | Cfg_sram_pd: Sram power down |
| 13:12 | | | Cfg_rx_phase: RX clock phase 0: 0 phase, 1: 90 phase, 2: 180 phase, 3: 270 phase. Recommended value: 0 |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 11:10 | R/W | 0 | Cfg_tx_phase: TX clock phase 0: 0 phase, 1: 90 phase, 2: 180 phase, 3: 270 phase. Recommended value: 2 |
| 9:8 | R/W | 0 | Cfg_co_phase: Core clock phase 0: 0 phase, 1: 90 phase, 2: 180 phase, 3: 270 phase. Recommended value: 2 |
| 7:6 | R/W | 0 | Cfg_src: Clock source 0: Crystal 24MHz or other frequencies selected by clock reset test control register. 1: Fix PLL, 1000MHz Recommended value: 1 |
| 5:0 | R/W | 0 | Cfg_div: Clock divider Frequency = clock source/cfg_div Clock off: cfg_div==0, the clock is disabled Divider bypass: cfg_div==1, clock source is used as core clock without divider Maximum divider 63. |

SD_EMMC_DELAY1 0x4

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:30 | R/W | 0 | Reserved. |
| 29:24 | R/W | 0 | Dly[4]: Data 4 delay line |
| 23:18 | R/W | 0 | Dly[3]: Data 3 delay line |
| 17:12 | R/W | 0 | Dly[2]: Data 2 delay line |
| 11:6 | R/W | 0 | Dly[1]: Data 1 delay line |
| 5:0 | R/W | 0 | Dly[0]: Data 0 delay line Total delay = 50ps * Dly When Dly == 0, no delay. When Dly ==63, 3150ps delay. NOTE: the 50ps is typical delay, actually delay may vary from chip to chip, from different temperature. |

SD_EMMC_DELAY2 0x8

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------|
| 31:30 | | | Reserved. |
| 29:24 | | | Dly[9]: Data 9 delay line |
| 23:18 | | | Dly[8]: Data 8 delay line |
| 17:12 | | | Dly[7]: Data 7 delay line |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 11:6 | | | Dly[6]: Data 6 delay line |
| 5:0 | | | Dly[5]: Data 5 delay line Total delay = 50ps * Dly When Dly == 0, no delay. When Dly ==63, 3150ps delay. NOTE: the 50ps is typical delay, actually delay may vary from chip to chip, from different temperature. |

SD_EMMC_ADJUST 0xC

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:23 | | | Unused |
| 22 | R/W | 0 | Adj_auto 1: Use cali_dut's first falling edge to adjust the timing, set cali_enable to 1 to use this function, simulation shows it can tracking 2.5ns range with 800ppm. 0: disable Working for HS200 mode, set Cali_enable to 1. Enhanced after gxlx project. Use RESP and DAT0 as reference, Separate RESP and DAT0, adjust the timing whenever there is a transition, insert a sample when there is no transition. |
| 21:16 | R/W | 0 | Adj_delay: Resample the input signals when clock index==adj_delay |
| 15 | R/W | 0 | Reserved |
| 14 | R/W | 0 | Cali_rise: 1: test the rising edge, recording rising edge location only. 0: test the falling edge |
| 13 | R/W | 0 | Adj_fixed: Adjust interface timing by resampling the input signals |
| 12 | R/W | 0 | Cali_enable: 1: Enable calibration 0: shut off to save power. |
| 11:8 | R/W | 0 | Cali_sel: Select one signal to be tested Signals are labeled from 0 to 9 the same as delay lines. Only one signal is tested at anytime. For example: Cali_sel == 9, test CMD line. |

SD_EMMC_CALOUT 0x10

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31:16 | | | Unused |

| | | | |
|------|---|--|--|
| 15:8 | R | | Cali_setup |
| 7 | R | | Cali_vld: The reading is valid When there is no rising edge or falling edge event, the valid is low, this reading is not valid. |
| 5:0 | R | | Cali_idx: The event happens at this index, The index starts from rising edge of core clock from 0, 1, 2, ... |

SD_EMMC_ADJ_IDX_LOG 0x20

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:30 | | | Current, Auto_adj mode, Current 6 bits adj_idx |
| 29:24 | | | Previous 1 |
| 23:18 | | | Previous 2 |
| 17:12 | | | Previous 3 |
| 11:6 | | | Previous 4 |
| 5:0 | | | Previous 5: Last two bits of previous 5 |

SD_EMMC_CLKTEST_LOG 0x24

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | | | Clktest_done, Test done |
| 30:0 | | | Clktest_times, Test clock core for $2^{\wedge}\text{Clktest_exp}$ |

SD_EMMC_CLKTEST_OUT 0x28

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | | | Clktest_out, All $2^{\wedge}\text{clktest_exp}$ test results add up. Note: divided by $2^{\wedge}\text{clktest_exp}$ and get average clock core period length measured by 50ps delay cells. |

SD_EMMC_EYETEST_LOG 0x2c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | | | eyetest_done, Test done |
| 30:0 | | | eyetest_times, Test eye for $2^{\wedge}\text{eyetest_exp}$ |

SD_EMMC_EYETEST_OUT0 0x30

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | | | All $2^{\wedge}\text{eyetest_exp}$ test results "OR" together. |

SD_EMMC_EYETEST_OUT1 0x34

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
|--------|-----|---------|-------------|

| | | | |
|------|--|--|---|
| 31:0 | | | eyetest_out1, All 2^eyetest_exp test results "OR" together. Total eyeout [62:0] = {Eyetest_out1[30:0], eyetest_out0[31:0]} EYEtest output changed to 64 bits after TXLX and A113 {eyetest_out1, eyetest_out0} |
|------|--|--|---|

SD_EMMC_INTF3 0x38

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 26 | | | Eyetest_sel, 0 : select core clock as eyetest clock. 1 : select DS after delay line as eyetest clock. Eyetest point is DS after delay line. |
| 25:23 | | | NAND_EDO, NAND Async interface EDO position after RE rising edge. [not for SD_eMMC] |
| 22 | | | Sd_intf3, Using SD interface 3 |
| 21:18 | | | Ds_sht_exp, 0: DS shift setting never expires, always using the DS_sht_m as shift length. None-zero: 2^ds_sht_exp after 2^ds_sht_exp "ms", the setting expired The internal FSM will automatically change the Ds shift setting. |
| 17:12 | | | Ds_sht_m, Shift DS by number of 50ps delay cells. If using auto FSM mode, it is the initial value. |
| 11 | | | Eyetest_on, 1: Turn on eye test After eyetest_done, set this bit to 0 to reset eyetest internal registers. |
| 10:6 | | | Eyetest_exp, Repeat the eye test for 2^eyetest_exp times, Or the test results together, report the final results. |
| 5 | | | Clktest_on_m, Manual turn on clock test |
| 4:0 | | | Clktest_exp, Repeat the clock test for 2^clktest_exp times. Add the clock length together, report the sum. |

SD_EMMC_START 0x40

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:2 | R/W | 0 | Desc_addr[31:2]: Descriptor address, the last 2 Bits are 0, SRAM: 4 bytes aligned, the valid address range is from 0x200~0x3ff DDR: 8 bytes aligned the valid address is anywhere in DDR, the length of chain is unlimited. Desc_addr = ADDR>>2. |

| | | | |
|---|-----|---|---|
| 1 | R/W | 0 | <p>Desc_busy: Start/Stop</p> <p>1: Start command chain execution process.</p> <p>0: Stop</p> <p>Write 1 to this register starts execution.</p> <p>Write 0 to this register stops execution.</p> |
| 0 | R/W | 0 | <p>Desc_int: SRAM/DDR</p> <p>1: Read descriptor from internal SRAM, limited to 32 descriptors.</p> <p>0: Read descriptor from external DDR</p> |

SD_EMMC_CFG 0x44

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:28 | R/W | 0 | <p>Cfg_ip_txd_adj: Data 1 interrupt,</p> <p>when in TXD mode, the data 1 irq is a input signal, the round trip delay is uncertain factor, change this cfg to compensate the delay.</p> |
| 27 | R/W | 0 | <p>Cfg_err_abort:</p> <p>1: abort current read/write and issue IRQ</p> <p>0: continue on current read/write blocks.</p> |
| 26 | R/W | 0 | <p>Cfg_irq_ds:</p> <p>1: Use DS pin as SDIO IRQ input,</p> <p>0: Use DAT1 pin as SDIO IRQ input.</p> |
| 25 | R/W | 0 | <p>Cfg_txd_retry:</p> <p>When TXD CRC error, host sends the block again.</p> <p>The total number of retries of one descriptor is limited to 15, after 15 retries, the TXD_err is set to high.</p> |
| 24 | R/W | 0 | <p>Cfg_txd_add_err: TXD add error test.</p> <p>Test feature, should not be used in normal condition.</p> <p>It will inverted the first CRC Bits of the 3rd block.</p> <p>Block index starts from 0, 1, 2, ...</p> |
| 23 | R/W | 0 | <p>Cfg_auto_clk: SD/eMMC Clock Control</p> <p>1: when BUS is idle and no descriptor is available, automatically turn off clock, to save power.</p> <p>0: whenever core clock is on the SD/eMMC clock is ON, it is still on/off during read data from SD/eMMC.</p> |
| 22 | R/W | 0 | <p>Cfg_stop_clk: SD/eMMC Clock Control</p> <p>1: no clock for external SD/eMMC, used in voltage switch.</p> <p>0: normal clock, the clock is automatically on/off during reading mode to back off reading in case of DDR slow response.</p> |
| 21 | R/W | 0 | <p>Cfg_cmd_low: Hold CMD as output Low</p> <p>eMMC boot mode.</p> |
| 20 | R/W | 0 | Cfg_chk_ds |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 19 | R/W | 0 | Cfg_ignore_owner: Use this descriptor even if its owner bit is "0". |
| 18 | R/W | 0 | Cfg_sdclk_always_on: 1: SD/eMMC clock is always ON 0: SD/eMMC clock is controlled by host. WARNING: Set SD/eMMC clock to always ON, host may lose data when DDR is slow. |
| 17 | R/W | 0 | Cfg_blk_gap_ip: 1: Enable SDIO data block gap interrupt period 0: Disabled. |
| 16 | R/W | 0 | Cfg_out_fall: DDR mode only The command and TXD start from rising edge. Set 1 to start from falling edge. |
| 15:12 | R/W | 0 | Cfg_rc_cc: Wait response-command, command-command gap before next command, 2cfg_rc_cc core clock cycles. |
| 11:8 | R/W | 0 | Cfg_resp_timeout: Wait response till 2cfg_resp_timeout core clock cycles. Maximum 32768 core cycles. |
| 7:4 | R/W | 0 | Cfg_bl_len: Block length 2cfg_bl_len, because internal buffer size is limited to 512 bytes, the cfg_bl_len <=9. |
| 3 | R/W | 0 | Cfg_dc_ugt: 1: DDR access urgent 0: DDR access normal |
| 2 | R/W | 0 | Cfg_ddr: 1: DDR mode 0: SDR mode |
| 1:0 | R/W | 0 | Cfg_bus_width: 0: 1 bit 1: 4 Bits 2: 8 Bits 3: 2 Bits (not supported) |

SD_EMMC_STATUS 0x48

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R | | Core_busy: 1: core is busy, desc_busy or sd_emmc_irq or bus_fsm is not idle. 0: core is idle. |
| 30 | R | | Desc_busy: 1: Desc input process is busy, more descriptors in chain. 0: no more descriptor in chain or desc_err. |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 29:26 | R | | Bus_fsm: BUS fsm |
| 25 | R | | DS: Input data strobe |
| 24 | R | | CMD_i: Input response signal |
| 23:16 | R | | DAT_i: Input data signals |
| 15 | R/W | | IRQ_sdio: SDIO device uses DAT[1] to request IRQ |
| 14 | R/W | | Resp_status: When resp_num is set to 1, the resp_addr is the response status IRQ enable Bits, if there is an error. |
| 13 | R/W | | End_of_Chain: End of Chain IRQ, Normal IRQ |
| 12 | R/W | | Desc_timeout: Descriptor execution time over time limit. The timeout limit is set by descriptor itself. Consider the multiple block read/write, set the proper timeout limits. |
| 11 | R/W | | Resp_timeout: No response received before time limit. The timeout limit is set by cfg_resp_timeout. |
| 10 | R/W | | Resp_err: Response CRC error |
| 9 | R/W | | Desc_err: SD/eMMC controller doesn't own descriptor. The owner bit is "0", set cfg_ignore_owner to ignore this error. |
| 8 | R/W | | Txd_err: TX data CRC error, For multiple block write, any one of blocks CRC error. |
| 7:0 | R/W | | Rxd_err: RX data CRC error per wire, for multiple block read, the CRC errors are Ored together. |

SD_EMMC_IRQ_EN 0x4c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:18 | | | unused |
| 17 | | | Cfg_cmd_setup, 1: improve CMD setup time by half SD_CLK cycle. 0: CMD is two cycle aligned with DATA. |
| 16 | R/W | 0 | Cfg_secure: Data read/write with crypto DES |
| 15 | R/W | 0 | en_IRQ_sdio: Enable sdio interrupt. |
| 14 | R/W | 0 | En_resp_status: Response status error. |
| 13 | R/W | 0 | en_End_of_Chain: End of Chain IRQ |
| 12 | R/W | 0 | en_Desc_timeout: Descriptor execution time over time limit. |
| 11 | R/W | 0 | en_Resp_timeout: No response received before time limit. |

| | | | |
|-----|-----|---|---|
| 10 | R/W | 0 | en_Resp_err: Response CRC error |
| 9 | R/W | 0 | en_Desc_err: SD/eMMC controller doesn't own descriptor. |
| 8 | R/W | 0 | En_txd_err: TX data CRC error |
| 7:0 | R/W | 0 | en_Rxd_err: RX data CRC error per wire. |

Descriptor_REG0 0x50

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | R/W | | SD_EMMC_CMD_CFG APB read wait Same as descriptor first word, resp_num = 1, response saved back into descriptor only. Read from this APB will hold APB bus |

Descriptor_REG1 0x54

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | | SD_EMMC_CMD_ARG APB write start Same as descriptor second word. Write to this APB address starts execution. If the current desc is busy, it will be executed after current descriptor is done. |

Descriptor_REG2 0x58

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | | SD_EMMC_CMD_DAT : Same as descriptor third word, 32 Bits data. |

Descriptor_REG3 0x5c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | | SD_EMMC_CMD_RSP: Write: response status IRQ enable Bits. Read: Response Bit 31:0 |

Descriptor_REG4 0x60

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------------------|
| 31:0 | R | | SD_EMMC_CMD_RSP1: Response bit 63:32 |

Descriptor_REG5 0x64

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------------------|
| 31:0 | R | | SD_EMMC_CMD_RSP2: Response bit 95:64 |

Descriptor_REG6 0x68

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------------|
| 31:0 | R | | SD_EMMC_CMD_RSP3: Response bit 127:96 |

Descriptor_REG7 0x6c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31:0 | | | Reserved |

Current_Next_Descriptor_REG0 0x70

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | R | | SD_EMMC_CURR_CFG: Current descriptor under execution. |

Current_Next_Descriptor_REG1 0x74

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------|
| 31:0 | R | | SD_EMMC_CURR_ARG |

Current_Next_Descriptor_REG2 0x78

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------|
| 31:0 | R | | SD_EMMC_CURR_DAT |

Current_Next_Descriptor_REG3 0x7c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------|
| 31:0 | R | | SD_EMMC_CURR_RSP |

Current_Next_Descriptor_REG4 0x80

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | R | | SD_EMMC_NEXT_CFG: Next descriptor waiting for execution, already read out from SRAM or DDR, can't be changed. |

Current_Next_Descriptor_REG5 0x84

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------|
| 31:0 | R | | SD_EMMC_NEXT_ARG |

Current_Next_Descriptor_REG6 0x88

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------|
| 31:0 | R | | SD_EMMC_NEXT_DAT |

Current_Next_Descriptor_REG7 0x8c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------|
| 31:0 | R | | SD_EMMC_NEXT_RSP |

SD_EMMC_RXD 0x90

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:25 | R | | Unused |
| 24:16 | R | | Data_blk: Rxd Blocks received from BUS Txd blocks received from DDR. |
| 15:10 | | | unused |
| 9:0 | R | | Data_cnt: Rxd words received from BUS. Txd words received from DDR. |

SD_EMMC_TXD 0x94

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------------|
| 31:25 | | | Unused |
| 24:16 | R | | Txd_blk: Txd BUS block counter |
| 15 | | | unused |
| 14:0 | R | | Txd_cnt: Txd BUS cycle counter |

13.4 Serial Peripheral Interface Communication Controller

13.4.1 Overview

SPI Communication Controller is designed for connecting general SPI protocol compatible module. This controller allows rapid data communication with less software interrupts than conventional serial communications.

13.4.2 Features

- Full-duplex synchronous serial interface
- Master/Slave configurable
- Four chip selects to support multiple peripherals
- Transfer continuation function allows unlimited length data transfers
- 64-bit wide by 16-entry FIFO for both transmit and receive data
- Polarity and phase of the Chip Select (SS) and SPI Clock (SCLK) are configurable
- Both PIO(Programming In/Out interface) and DMA(Direct Memory Access interface) supported

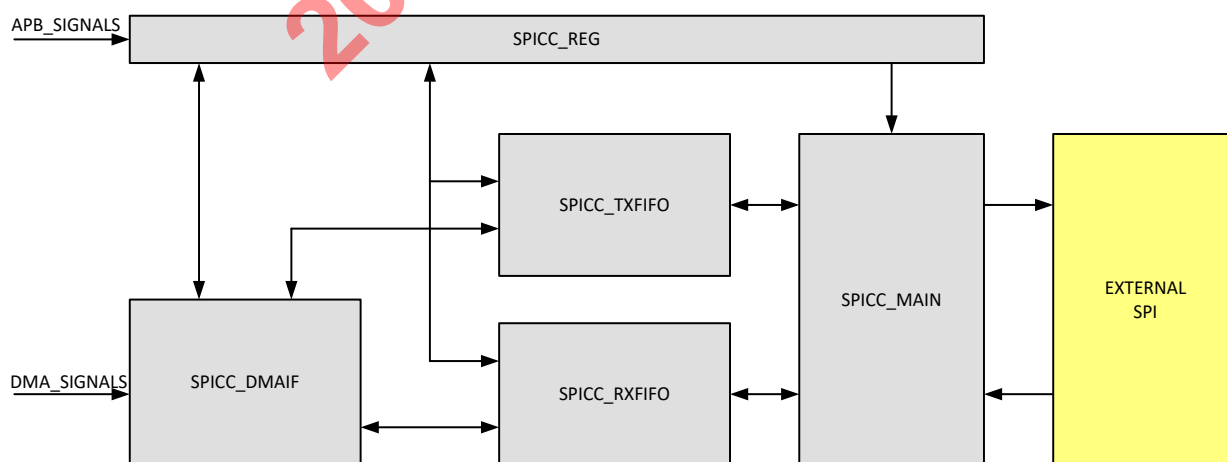

13.4.3 Functional Description

The following are two SPICC modes of operation:

- Master Mode—When the SPICC module is configured as a master, it uses a serial link to transfer data between the SPICC and an external device. A chip-enable signal and a clock signal are used to transfer data between these two devices. If the external device is a transmit-only device, the SPICC master's output port can be ignored and used for other purposes. To use the internal TXFIFO and RXFIFO, two auxiliary output signals, SS and SPI_RDY, are used for data transfer rate control. The user can also program the sample period control register to a fixed data transfer rate.
- Slave Mode—When the SPICC module is configured as a slave, the user can configure the SPICC Control register to match the external SPI master's timing. In this configuration, SS becomes an input signal, and is used to control data transfers through the Shift register, as well as to load/store the data FIFO.

There are 5 sub-modules in spi communication controller, i.e. spicc_reg, spicc_dmaif, spicc_txfifo, spicc_rxfifo, and spicc_main. Transmitting and receiving are using different channel, that means they have different buffer.

Figure 13-3 SPICC Block Diagram

- spicc_reg is driven by host cpu, and spicc_reg is responsible for configuring other modules.

- spicc_dmaif is responsible for dealing with DMA operations.
- spicc_txfifo contains a transmission FIFO.
- spicc_rxfifo contains a receiving FIFO.
- spicc_main is responsible for main control of basic spi operation.

Here are SPI External Signals:

Table 13-7 SPI External Signals

| Signal Name | I/O | Description |
|---------------|-----|---|
| spicc_sclk | IO | SCLK, SPI Clock |
| spicc_miso | IO | MISO, Master Input Slave Output |
| spicc_mosi | IO | MOSI, Master Output Slave In |
| spicc_ss[3:0] | IO | SS, SPI chip Select, Supports up to 4 slaves. |

And here is SPI Generic Timing:

Figure 13-4 SPI Generic Timing

13.4.4 Register Description

RXDATA 0xffd13000

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31:0 | R | 0 | Rx Data |

Note1: when PIO mode, programmer can get data from this register.

TXDATA 0xffd13004

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31:0 | W | 0 | Tx Data |

Note1: when PIO mode, programmer need send data to this register.

CONREG 0xffd13008

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:19 | RW | 0 | [13]burst_length ([5:0]bit number of one word/package, [12:6]burst length-1) |
| 18:16 | RW | 0 | [3]data_rate (sclk will be divided by system clock with equation: $2^{(data_rate+2)}$, Example: if system clock = 128MHz and data_rate=2, sclk's frequency equals 8MHz) |
| 15:14 | | | Reserved |
| 13:12 | RW | 0 | [2]chip_select (00:select ss_0, 01:select ss_1, 10:select ss_2, 11:select ss_3,) |
| 11:10 | | | Reserved |
| 9:8 | RW | 0 | [2]drctl (0:ignore RDY input, 1:Data ready using pin rdy_i's falling edge, 2:Data ready using pin rdy_i's low level, 3:reserved) |
| 7 | RW | 0 | [1]sspol (0:SS polarity Low active,1:High active) |
| 6 | RW | 0 | [1]ssctl (see details in Note1) |
| 5 | RW | 0 | [1]pha (clock/data phase control, see section 2.2) |
| 4 | RW | 0 | [1]pol (clock polarity control, see section 2.2) |
| 3 | RW | 0 | [1]smc (start mode control, see Note2) |
| 2 | RW | 0 | [1]xch(exchange bit, ATTN:will automatically cleared when burst finished, see Note3) |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------------------|
| 1 | RW | 0 | [1]mode (0:slave,1:master) |
| 0 | RW | 0 | [1]en (0:spicc disable,1:enable) |

Note1: In one burst of master mode, if ssctl ==1, ss will output 1 between each spi transition. And if ssctl ==0, ss will output 0.

Note2: smc is for start mode control. If smc ==0, burst will start when xch is set to 1'b1; if smc==1, burst will start when txfifo is not empty.

Note3: setting xch will issue a burst when smc==0, and This bit will be self-cleared after burst is finished.

INTREG 0xffd1300c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:8 | | | Reserved |
| 7 | RW | 0 | [1]tcen(transfer completed interrupt enable) |
| 6 | RW | 0 | Reserved |
| 5 | RW | 0 | [1]rfen(rxfifo full interrupt enable) |
| 4 | RW | 0 | Reserved |
| 3 | RW | 0 | [1]rren(rxfifo ready interrupt enable) |
| 2 | RW | 0 | [1]tfen(txfifo full interrupt enable) |
| 1 | RW | 0 | Reserved |
| 0 | RW | 0 | [1]teen(txfifo empty interrupt enable) |

Note1: Interrupt Status presents in STATREG.

DMAREG 0xffd13010

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:26 | RW | 0 | [6]DMA Burst Number |
| 25:20 | RW | 0 | [6]DMA Thread ID |
| 19 | RW | 0 | [1]DMA Urgent |
| 18:15 | RW | 0x7 | [4]Number in one Write request burst(0:1,1:2...) |
| 14:11 | RW | 0x7 | [4]Number in one Read request burst(0:1,1:2...) |
| 10:6 | RW | 0x8 | [5]RxFIFO threshold(RxFIFO's count>=thres, will request write) |
| 5:1 | RW | 0 | [5]TxFIFO threshold(TxFIFO's count<=thres, will request read) |

| | | | |
|---|----|---|----------------|
| 0 | RW | 0 | [1]DMA Enable |
|---|----|---|----------------|

STATREG 0xffd13014

| Bits | R/W | Defaults | Description |
|------|-----|----------|--|
| 31:8 | | | Reserved |
| 7 | RW | 0 | [1]tc(transfer completed, w1c, see Note1) |
| 6 | R | 0 | Reserved |
| 5 | R | 0 | [1]rf(rxfifo full) |
| 4 | R | 0 | Reserved |
| 3 | R | 0 | [1]rr(rxfifo ready) |
| 2 | R | 0 | [1]tf(txfifo full) |
| 1 | R | 0 | Reserved |
| 0 | R | 0 | [1]te(txfifo empty) |

Note1: tc is the status bit which indicates a burst transfer is completed. And a burst transfer should be started by writing xch 1'b1. This bit supports w1c(Write 1 clear).

PERIODREG 0xffd13018

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------------------|
| 31:15 | | | Reserved |
| 14:0 | RW | 0 | [15]period(wait cycles, see Note1) |

Note1: Programmer can add wait cycles through this register if transmission rate need to be controlled.

TESTREG 0xffd1301c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:23 | RW | 0 | Reserved |
| 23:22 | RW | 0 | [2]fiforst(fifo soft reset) |
| 21:16 | RW | 0x15 | [6]dlyctl(delay control) |
| 15 | RW | 0 | [1]swap(data swap for reading rxfifo) |
| 14 | RW | 0 | [1]lbc(loop back control) |
| 12:10 | R | 0 | [3]smstatus(internal state machine status) |
| 9:5 | R | 0 | [5]rxcnt(internal Rx FIFO counter) |
| 4:0 | R | 0 | [5]txcnt(internal Tx FIFO counter) |

Note1: Programmer can only use the TESTREG[9:0], rxcnt(internal Rx FIFO counter) and txcnt(internal Tx FIFO counter) , and other Bits just for test.

DRADDR 0xffd13020

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------|
| 31:0 | RW | 0 | Read Address of DMA |

DWADDR 0xffd13024

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|----------------------|
| 31:0 | RW | 0 | Write Address of DMA |

LD_CNTL0 (0xffd13028)

| Bits | R/W | Defaults | Description |
|------|-----|----------|---|
| 31:9 | RW | 0 | Reserved |
| 8 | RW | 0 | dma raddr/waddr load by dma_enable signal |
| 7 | RW | 0 | dma waddr load by vsync irq |
| 6 | RW | 0 | dma raddr load by vsync irq |
| 5 | RW | 0 | dma write counter enable |
| 4 | RW | 0 | dma read counter enable |
| 3 | RW | 0 | xch enable set by vsync irq |
| 2 | RW | 0 | dma enable set by vsync irq |
| 1 | RW | 0 | Reserved |
| 0 | RW | 0 | Vsync irq source select |

LD_CNTL1 0xffd1302c

| Bits | R/W | Defaults | Description |
|-------|-----|----------|-------------------|
| 31:16 | RW | 0 | dma write counter |
| 15:0 | RW | 0 | dma read counter |

LD_RADDR 0xffd13030

| Bits | R/W | Defaults | Description |
|------|-----|----------|----------------------------------|
| 31:0 | RW | 0 | shadow dma read address for load |

LD_WADDR 0xffd13034

| Bits | R/W | Defaults | Description |
|------|-----|----------|-----------------------------------|
| 31:0 | RW | 0 | shadow dma write address for load |

ENHANCE_CNTL 0xffd13038

| Bits | R/W | Defaults | Description |
|-------|-----|----------|--|
| 31:30 | R | 0 | Reserved |
| 29 | R/W | 0 | main clock always on |
| 28 | R/W | 0 | clk-cs delay enable |
| 27 | R/W | 0 | cs_oen enhance enable |
| 26 | R/W | 0 | clk_oen enhance enable |
| 25 | R/W | 0 | mosi_oen enhance enable |
| 24 | R/W | 0 | spi clk select 0: controlled by data_rate in CONREG 1: controlled by enhance_clk_div in ENHANCE_CNTL |
| 23:16 | R/W | 0 | enhance_clk_div |
| 15:0 | R/W | 0 | clk-cs delay value |

ENHANCE_CNTL1 (0xffd1303c)

| Bits | R/W | Defaults | Description |
|-------|-----|----------|---|
| 31:29 | R/W | 0 | enhance_fclk_mosi_oen_dlyctl: mosi_oen delay control in fclk |
| 28 | R/W | 0 | enhance_fclk_mosi_oen_dlyctl_en: enable dlyctl |
| 27:25 | R/W | 0 | enhance_fclk_mosi_o_dlyctl: mosi_o delay control in fclk |
| 24 | R/W | 0 | enhance_fclk_mosi_o_dlyctl_en: enable dlyctl |
| 23:21 | R/W | 0 | enhance_fclk_miso_i_dlyctl: miso_i delay control in fclk |
| 20 | R/W | 0 | enhance_fclk_miso_i_dlyctl_en: enable dlyctl |
| 19:17 | R/W | 0 | enhance_fclk_mosi_i_dlyctl: mosi_i delay control in fclk |
| 16 | R/W | 0 | enhance_fclk_mosi_i_dlyctl_en: enable dlyctl |
| 15 | R/W | 0 | enhance_fclk_en: fclk gate enable |
| 14 | R/W | 0 | enhance_mosi_i_capture_en: enable, 1=select enhance capture function for mosi_i (slave mode) |
| 9:1 | R/W | 0 | enhance_clk_tcmt: adjust capturing timing for miso_i data (master mode). when clk_cnt=enhance_clk_tcmt, capture input data. the value of enhance_clk_tcmt must be less than the most value of clk_cnt. sclk will be divided by system clock with clk_cnt. |
| 0 | R/W | 0 | enhance_miso_i_capture_en: enable, 1=select enhance capture function for miso_i (master mode) |

ENHANCE_CNTL2 0xffd13040

| Bits | R/W | Defaults | Description |
|------|-----|----------|-------------|
|------|-----|----------|-------------|

| | | | |
|-------|-----|---|------------------------|
| 31 | R/W | 0 | clk_cs_tt delay enable |
| 30:16 | R/W | 0 | clk_cs_tt delay value |
| 15 | R/W | 0 | clk_cs_ti delay enable |
| 14:0 | R/W | 0 | clk_cs_ti delay value |

13.5 Serial Peripheral Interface Flash Controller

13.5.1 Overview

SPI Flash Controller is designed for connecting varied SPI Flash memory.

13.5.2 Features

- Support three operation modes, NOR Flash mode, Master mode, and Slave mode.
- Support read/write buffer up to 64bytes.
- Support no clock toggling during DUMMY state.
- Support hold by an external pin during a transition.
- AHB read support byte and halfword.
- Support bit-number rather than byte-number for each stage.
- Support 2/4 wire writing like fast reading
- Support both rising-edge and falling-edge for SPI slave sampling and SPI master sampling.
- Support 1 wire for SPI_D and SPI_Q.
- Support SPI_CK setup and hold time by cycles
- Support 8 bit clock divider, so SPI_CK can be low as 1/256 HCLK
- Support byte-order in a word
- Support no command state, so the command is sent/received in address state by 2/4 wires.
- Support both data input and data output in a transition. SPI_DOUT->(SPI_DUMMY)->SPI_DIN

13.5.3 RegisterDescription

Note that: If the bit2 “Backward Compatible” in “SPI User Register” is 1, the registers and functions of this SPI controller are as same as Apollo SPI controller.

To use SPI Flash commands, please set the bit2 “Backward Compatible” in “SPI User Register” as “1”.

SPI FLASH Command register 0xffd14000

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | READ command. 1 = read. When it becomes 0, the read command is finished. The READ command could be (0xEB, 0x6B, 0xBB, 0x3B, 0x0B, 0x03). By default is 0x0B. One read command will read 1338erilog133813381338 32x8bits data. And saved in data cache. |
| 30 | R/W | 0 | WREN command. (0x06) |
| 29 | R/W | 0 | WRDI command. (0x04). |
| 28 | R/W | 0 | RDID command. (0x9f). |
| 27 | R/W | 0 | RDSR command. (0x05). |
| 26 | R/W | 0 | WRSR command. (0x01). |
| 25 | R/W | 0 | Page program command. (0xAD or 0x02). |
| 24 | R/W | 0 | SE command (0x20). |
| 23 | R/W | 0 | BE command (0xD8). |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 22 | R/W | 0 | CE command.(0xC7). |
| 21 | R/W | 0 | Deep Power Down command(0xB9). |
| 20 | R/W | 0 | RES command. (0xAB). |
| 19 | R/W | 0 | HPM command.(0xA3). (Just For winbond SPI flash). |
| 18 | R/W | 0 | USER defined command. |
| 17:0 | R/W | 0 | Reserved for future. |

If the bit2 “Backward Compatible” in “SPI User Register” is 1, the bit15:0 of this registers are defined as same as Apollo SPI controller.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 15 | R/W | 0 | USER command address bit. 1 = user command includes address. 0 = no address. |
| 14 | R/W | 0 | USER command dummy bit. 1= user command includes Dummy bytes. |
| 13 | R/W | 0 | USER command DIN bit. 1 = use command includes data in. 0 = no data in. |
| 12 | R/W | 0 | USER command DO bit. 1 == use command includes data output. 0 = no data output. Only DIN or DO support for one User command. Not both. |
| 11:10 | R/W | 0 | User command dummy byte number. How many dummy bytes for user command. |
| 9:8 | R/W | 0 | Reserved for future. |
| 7:0 | R/W | 0 | command value for User command bit[7:0]. |

SPI address register 0xffd14004

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------------------|
| 31:0 | R/W | 0 | The address[31:0] of the user command |

If the bit2 “Backward Compatible” in “SPI User Register” is 1, the bit15:0 of this registers are defined as same as Apollo SPI controller.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------------------|
| 31:30 | R/W | 0 | Reserved. |
| 29:24 | R/W | 0 | DIN/DO data bytes number. |
| 23:0 | R/W | 0 | 24 bits address. |

SPI control register 0xffd14008

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31:27 | R/W | 0 | Reserved. |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 26 | R/W | 0 | Write bit order. 1 = 0, 1, 2, 3, 4, 5, 6, 7. 0 = 7, 6, 5, 4, 3, 2, 1, 0. |
| 25 | R/W | 0 | Read bit order. . 1 = 0, 1, 2, 3, 4, 5, 6, 7. 0 = 7, 6, 5, 4, 3, 2, 1, 0. |
| 24 | R/W | 0 | Fast read QIO mode. |
| 23 | R/W | 0 | Fast read DIO mode. |
| 22 | R/W | 0 | Write 2 bytes status mode. For some of winbond SPI flash, the status register is 16bits. |
| 21 | R/W | 1 | SPI flash WP pin value if use SPI flash WP pin as write protection. |
| 20 | R/W | 0 | Fast read QOUT mode. |
| 19 | R/W | 1 | 1 = SPI share pins with SDRAM. 0 = doesn't share. |
| 18 | R/W | 0 | SPI hold mode. 1=SPI controller would use SPI hold function. 0 = SPI controller won't use hold function. The SPI flash hold pin can be tie high on the board. Or SPI controller can use hold pin as QIO/QOUT mode. |
| 17 | R/W | 1 | 1 = enable AHB request. 0 = disable AHB request when you reconfigure SPI controller or running APB bus commands. |
| 16 | R/W | 0 | 1 =enable SST SPI Flash aai command. The APB bus PP command will send AAI command. |
| 15 | R/W | 1 | 1 = release from Deep Power-Down command is with read electronic signature. |
| 14 | R/W | 0 | Fast read DOUT mode. |
| 13 | R/W | 1 | Fast read mode. AHB bus read requirement and APB bus read command use the command 0x0Bh. |
| 12:0 | R/W | 0 | Reserved for future. |

If the bit2 "Backward Compatible" in "SPI User Register" is 1, the bit12:0 of this registers are defined as same as Apollo SPI controller.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 12 | R/W | 1 | 1=SPI clock frequency is same as system clock. 0 = SPI clock frequency will use clock divider. |
| 11:8 | R/W | 0 | Clock counter for clock divider. |
| 7:4 | R/W | 0 | Clock high counter. |
| 3:0 | R/W | 0 | Clock low counter. If the SPI clock frequency = $\text{sys_clock_frequency} / n$. Then the clock divider counter = $n - 1$; the clock high counter = $n / 2 - 1$; the clock low counter = $n - 1$; For example, if you want to SPI clock 1340erilog13401340 is divided by 2 of the system clock. The clock divider counter = 1, clock high counter = 0, clock low counter = 1. For SPI clock frequency = system clock / 4. |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| | | | The clock divider counter = 3, clock high counter = 1, clock low counter = 3. |

SPI control register 1**0xffd1400c**

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:28 | R/W | 5 | SPI Clock cycles for SPI flash timing requirement tCSH. |
| 27:16 | R/W | 0xff | SPI Clock cycles for SPI flash timing requirement tRES. |
| 15:0 | R/W | 0x0120 | System clock cycles for SPI bus timer. In SPI share bus and SPI hold function mode. SPI bus timer used , if SPI use the bus for a limit time, SPI controller will diassert SPI hold pin to halt the SPI Flash, and give the bus control to SDRAM. |

SPI status register**0xffd14010**

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:24 | R/W | 0 | Reserved. |
| 23:16 | R/W | 0 | For winbond SPI flash, this 8 bits used for DIOMode M7-M0, |
| 15:0 | R/W | 0 | SPI status register value. WRSR command will write this value to SPI flash status. RDSR or RES command will save the read result to this register. |

When SPI controller in the slave mode, this register are the status for the SPI master to read out.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | 0 | In SPI Slave mode, the read status of the user command |

SPI control register 2**0xffd14014**

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:28 | R/W | 0 | Delay cycle number of SPI_CS input in SPI slave mode or SPI_CS output in SPI master mode 0= not delay, 1 = delayed by 1 cycle of system clock, 2 = delayed by 2 cycles of system clock , ... |
| 27:26 | R/W | 0 | delay mode of SPI_CS input in SPI slave mode or SPI_CS output in SPI master mode 0= not latched by the edges of SPI_CK 1= latched by the falling edges of SPI_CK 2 = latched by the rising edges of SPI_CK |
| 25:23 | R/W | 0 | Delay cycle number of SPI Data from SPI Master to SPI Slave In SPI master mode, it is for data outputs; in SPI slave mode, it is for data inputs. 0= not delay, 1 = delayed by 1 cycle of system clock, 2 = delayed by 2 cycles of system clock , ... |
| 22:21 | R/W | 0 | Delay mode of SPI Data from SPI Master to SPI Slave In SPI master mode, it is for data outputs; in SPI slave mode, it is for data inputs. 0= not latched by the edges of SPI_CK |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| | | | 1= latched by the falling edges of SPI_CK 2 = latched by the rising edges of SPI_CK |
| 20:18 | R/W | 0 | Delay cycle number of SPI Data from SPI Slave to SPI Master. In SPI master mode, it is for data inputs; in SPI slave mode, it is for data outputs. 0= not delay, 1 = delayed by 1 cycle of system clock, 2 = delayed by 2 cycles of system clock , ... |
| 17:16 | R/W | 0 | Delay mode of SPI Data from SPI Slave to SPI Master. In SPI master mode, it is for data inputs; in SPI slave mode, it is for data outputs. 0= not latched by the edges of SPI_CK 1= latched by the falling edges of SPI_CK 2 = latched by the rising edges of SPI_CK |
| 15:12 | R/W | 0 | In SPI master mode, SPI_CK rising edge mode 4'b1000 = later by 1/4 cycle of SPI_CK 4'b1001 = later by 1/8 cycle of SPI_CK 4'b1010 = later by 1/16 cycle of SPI_CK 4'b1011 = later by 1/32 cycle of SPI_CK 4'b1100 = earlier by 1/4 cycle of SPI_CK 4'b1101 = earlier by 1/8 cycle of SPI_CK 4'b1110 = earlier by 1/16 cycle of SPI_CK 4'b1111 = earlier by 1/32 cycle of SPI_CK Others = Normal |
| 11:8 | R/W | 0 | In SPI master mode, SPI_CK falling edge mode 4'b1000 = later by 1/4 cycle of SPI_CK 4'b1001 = later by 1/8 cycle of SPI_CK 4'b1010 = later by 1/16 cycle of SPI_CK 4'b1011 = later by 1/32 cycle of SPI_CK 4'b1100 = earlier by 1/4 cycle of SPI_CK 4'b1101 = earlier by 1/8 cycle of SPI_CK 4'b1110 = earlier by 1/16 cycle of SPI_CK 4'b1111 = earlier by 1/32 cycle of SPI_CK Others = Normal |
| 7:4 | R/W | 1 | In master mode, SPI clock cycles for SPI hold timing. |
| 3:0 | R/W | 1 | In master mode, SPI clock cycles for SPI setup timing. SPI setup time and SPI hold time is used to configure how soon the controller can enable spi_cs_n after the controller get the bus and how long the controller still keep the bus after the spi_cs_n become to be high. |

SPI Clock register 0xffd14018

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
|--------|-----|---------|-------------|

| | | | |
|-------|-----|---|---|
| 31 | R/W | 1 | 1=SPI clock frequency is same as system clock. 0 = SPI clock frequency will use clock divider. |
| 30:18 | R/W | 0 | Clock counter for Pre-scale divider: 0= not pre-scale divider, 1= pre-scale divided by 2, 2= pre-scale divided by 3, |
| 17:12 | R/W | 0 | Clock counter for clock divider. |
| 11:6 | R/W | 0 | Clock high counter in SPI master mode. In SPI slave mode, it is for the delay counter for the rising edges of spi_ck_i |
| 5:0 | R/W | 0 | Clock low counter, in SPI master mode. In SPI slave mode, it is for the delay counter for the falling edges of spi_ck_i If the SPI clock frequency = sys_clock_frequency / n. Then the clock divider counter = n - 1; the clock high counter = n / 2 - 1; the clock low counter = n - 1; For example, if you want to SPI clock 1343erilog13431343 is divided by 2 of the system clock. The clock divider counter = 1, clock high counter = 0, clock low counter = 1. For SPI clock frequency = system clock / 4. The clock divider counter = 3, clock high counter = 1, clock low counter = 3. |

SPI User register

0xffd1401c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 1 | USER command COMMAND bit. 1 = user command includes command. 0 = no command. If some SPI slaves may support 2/4 IO at the first cycle, clear this bit. |
| 30 | R/W | 0 | USER command ADDRESS bit. 1 = user command includes address. 0 = no address. |
| 29 | R/W | 0 | USER command DUMMY bit. 1= user command includes Dummy bytes. |
| 28 | R/W | 0 | USER command DIN bit. 1 = user command includes data in. 0 = no data in. |
| 27 | R/W | 0 | USER command DO bit. 1 = user command includes data output. 0 = no data output. If both DIN and DO are valid, SPI master is firstly in data output state and then in data input state. If all of DUMMY, DO and DIN are valid, SPI master is firstly in data output state and then in dummy state, finally in data input state. |
| 26 | R/W | 0 | USER command dummy idle bit. 1= no SPI clock toggling in dummy state. 0= normal |
| 25 | R/W | 0 | USER command highpart bit for SPI_DOUT stage. It is for data-output in spi master mode and for data-input in spi slave mode. 1 = only high half part of buffer are used. 0 = low half part or the whole 64bytes are used. |
| 24 | R/W | 0 | USER command highpart bit for SPI_DIN stage. It is for data-input in spi master mode and for data-output in spi slave mode. 1 = only high half part of buffer are used. 0 = low half part or the whole 64bytes are used. |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 23 | R/W | 0 | User command external hold bit for prep. 1 = in prep state, SPI master controller can be hold by the external pin SPI_HOLD |
| 22 | R/W | 0 | User command external hold bit for command. 1 = in command state, SPI master controller can be hold by the external pin SPI_HOLD |
| 21 | R/W | 0 | User command external hold bit for address. 1 = in address state, SPI master controller can be hold by the external pin SPI_HOLD |
| 20 | R/W | 0 | User command external hold bit for dummy. 1 = in dummy state, SPI master controller can be hold by the external pin SPI_HOLD |
| 19 | R/W | 0 | User command external hold bit for data input. 1 = in data input state, SPI master controller can be hold by the external pin SPI_HOLD |
| 18 | R/W | 0 | User command external hold bit for data output. 1 = in data output state, SPI master controller can be hold by the external pin SPI_HOLD |
| 17 | R/W | 1 | User command external hold polarity bit. 1 = high is valid for hold, 0 = low is valid for hold. |
| 16 | R/W | 0 | Single DIO mode: Data output and input apply only 1 wire. |
| 15 | R/W | 0 | Fast write QIO mode. |
| 14 | R/W | 0 | Fast write DIO mode. |
| 13 | R/W | 0 | Fast write QOUT mode. |
| 12 | R/W | 0 | Fast write DOUT mode. |
| 11 | R/W | 0 | Write byte order. 0 = d[7:0], d[15:8], d[23:16], d[31:24]. 1 = d[31:24], d[23:16], d[15:8], d[7:0] |
| 10 | R/W | 0 | Read byte order. 0 = d[7:0], d[15:8], d[23:16], d[31:24]. 1 = d[31:24], d[23:16], d[15:8], d[7:0] |
| 9:8 | R/W | 0 | AHB endian mode: 0= little-endian; 1= big-endian; 2~3 reserved |
| 7 | R/W | 0 | In SPI master mode, the clock output edge bit: 0 = SPI_CK is inverted, 1 = SPI_CK is not inverted |
| 6 | R/W | 1 | In SPI slave mode, the clock input edge bit: 0 = SPI_CK_I is inverted, 1 = SPI_CK_I is not inverted |
| 5 | R/W | 0 | SPI CS setup bit: 1 = valid in prep state |
| 4 | R/W | 0 | SPI CS hold bit: 1 = valid in done state |
| 3 | R/W | 0 | AHB-read apply the configurations of user-command, such as command value, bit-length,... |
| 2 | R/W | 1 | Backward Compatible: 1 = compatible to Apollo SPI This bit affect the three registers: "SPI Flash Commmand Register", "SPI Address Register" and "SPI Control Register" |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 1 | R/W | 0 | AHB-read support 4byte address, when AHB-read apply the configurations of user-command. 1 = 4byte address, 0 = 3byte address |
| 0 | R/W | 0 | In SPI master mode, Enable bit for Data input during SPI_DOUT stage. 1 = enable; 0 = disable This bit shall not be used in 2/4wire or SIO. When this bit is 1, during SPI_DOUT stage, data input are stored into cacheline/buffer from address 0, i.e., Bit24 is not controlling the start address. The data output can be specified by bit25 |

SPI User register 1 **0xffd14020**

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:26 | R/W | 0 | USER command bit number for address state 0 = 1 bit, 1= 2 bits, ... |
| 25:17 | R/W | 0 | USER command bit number for data output state 0 = 1 bit, 1= 2 bits, ... |
| 16:8 | R/W | 0 | USER command bit number for data input state 0 = 1 bit, 1= 2 bits, ... |
| 7:0 | R/W | 0 | USER command cycle number for dummy state 0 = 1 cycle, 1= 2 cycles, ... |

SPI User register 2 **0xffd14024**

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | R/W | 0 | USER command bit number for command state 0 = 1 bit, 1= 2 bits, ... |
| 27:16 | R/W | 0 | Reserved |
| 15:0 | R/W | 0 | The command content of the user command |

SPI User register 3 **0xffd14028**

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | R/W | 0 | In SPI Master mode, the address[63:32] of the user command In SPI Slave mode, the write status of the user command |

SPI PIN register

0xffd1402c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R/W | 0 | Pin swap when it is in DIN stage and SPI data input are 4wire. This feature is for Ubec Zigbee chips. 1 = swap between {spi_q, spi_d_i} and {spi_hold_i, spi_wp_i} 0 = normal |
| 30 | R/W | 0 | In SPI Master mode, CS keep active after a transition. 1 = enable; 0 = disable |
| 29 | R/W | 0 | Idle edge of SPI_CK 0 = low when it is idle 1 = high when it is idle |
| 28:24 | R/W | 0 | Reserved |
| 23 | R/W | 0 | In the SPI slave mode, spi_cs_i polarity: 1= high voltage is active 0= low voltage is active |
| 22:21 | R/W | 0 | In the SPI slave mode, spi_ck_i and spi_cs_i source pins 0=SPI_CK and SPI_CS pins, respectively 1=SPI_CS2 and SPI_CS1 pins, respectively 2=SPI_HOLD and SPI_WP pins, respectively |
| 20 | R/W | 0 | SPI_CS2 and SPI_CS1 pin function MUX 0= spi_ck and spi_cs in the SPI master mode 1= input pads for spi_ck_i and spi_cs_i, respectively, in the SPI slave mode |
| 19 | R/W | 0 | SPI_CK and SPI_CS pin function MUX 0= spi_ck and spi_cs in the SPI master mode 1= input pads for spi_ck_i and spi_cs_i, respectively, in the SPI slave mode |
| 18:17 | R/W | 0 | SPI_HOLD and SPI_WP pin function MUX 0= normal 1= spi_q and spi_d, respectively 2= spi_cs3 and spi_cs2, repectively 3= input pads for spi_ck_i and spi_cs_i, respectively, in the SPI slave mode |
| 16 | R/W | 0 | SPI_D and SPI_Q switch 1= SPI_D and SPI_Q pin-functions are swapped 0= normal |
| 15:11 | R/W | 0 | In Master mode, these are spi_ck MUX bit[4:0] for spi_cs4 (SPI_HOLD pin), spi_cs3 (SPI_WP pin), spi_cs2, spi_cs1 and spi_cs, respectively 1= this pin is spi_ck, if this pin is not idle 0= this pin is spi_cs, if this pin is not idle |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 10:6 | R/W | 0 | In Master mode, these are polarity bit[4:0] for spi_cs4 (SPI_HOLD pin), spi_cs3 (SPI_WP pin), spi_cs2, spi_cs1 and spi_cs, respectively 1= high voltage is active 0= low voltage is active |
| 5:0 | R/W | 0x1E | In Master mode, these are idle bit[5:0] for SPI_CK, for spi_cs4 (SPI_HOLD pin), spi_cs3 (SPI_WP pin), spi_cs2, spi_cs1 and spi_cs, respectively 1= idle, i.e., the spi_ck signal is 0 or the spi_cs is at the inactive level 0= active if SPI controller is working |

SPI Slave register**0xffd14030**

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | SPI controller SW reset: 1 = reset, 0 = none |
| 30 | R/W | 0 | SPI slave mode: 1 = slave, 0 = master |
| 29 | R/W | 0 | In SPI slave mode, the enable bit for the command of write-buffer-and-read-buffer 0= disable, 1=enable |
| 28 | R/W | 0 | In SPI slave mode, the enable bit for the command of write-status-and-read-status 0= disable, 1=enable |
| 27 | R/W | 0 | SPI slave command define enable 0=Apply the last 3bits of Flash commands and two extra command. 1=Apply the user defined command in SPI Slave register 3 |
| 26:4 | R/W | 0 | Reserved |
| 11:10 | R/W | 0 | spi_cs_i recovery mode: 0= and 1= or 2= normal 3= delayed |
| 9:5 | R/W | 0 | Interrupt enable for bit4:0 1= enable, 0=disable |
| 4 | R/W | 0 | A SPI transition is done. (whatever it is in SPI master mode or SPI slave mode) |
| 3 | R/W | 0 | In SPI slave mode, a status write is done |
| 2 | R/W | 0 | In SPI slave mode, a status read is done |
| 1 | R/W | 0 | In SPI slave mode, a buffer write is done |
| 0 | R/W | 0 | In SPI slave mode, a buffer read is done |

SPI Slave register 1**0xffd14034**

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:27 | R/W | 0 | In SPI slave mode, status bit number 0 = 1 bit, 1= 2 bits, ... |
| 26 | R/W | 0 | In SPI slave mode, status fast read/write enable bit: 1 = enable, 0 = disable |
| 25 | R/W | 0 | In SPI slave mode, status read back enable bit: 1 = reading status is written status in SPI User register 3, 0 = reading status is in SPI Status register. |
| 24:16 | R/W | 0 | In SPI slave mode, buffer bit number 0 = 1 bit, 1= 2 bits, ... |
| 15:10 | R/W | 0 | In SPI slave mode, address bit number for reading buffer 0 = 1 bit, 1= 2 bits, ... |
| 9:4 | R/W | 0 | In SPI slave mode, address bit number for writing buffer 0 = 1 bit, 1= 2 bits, ... |
| 3 | R/W | 0 | In SPI slave mode, dummy enable bit for writing status 1=enable, 0=disable |
| 2 | R/W | 0 | In SPI slave mode, Dummy enable bit for reading status 1=enable, 0=disable |
| 1 | R/W | 0 | In SPI slave mode, Dummy enable bit for writing buffer 1=enable, 0=disable |
| 0 | R/W | 0 | In SPI slave mode, Dummy enable bit for reading buffer 1=enable, 0=disable |

SPI Slave register 2**0xffd14038**

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | R/W | 0 | In SPI slave mode, Dummy cycle number for writing buffer 0 = 1 cycle, 1= 2 cycles, ... |
| 23:16 | R/W | 0 | In SPI slave mode, Dummy cycle number for reading buffer 0 = 1 cycle, 1= 2 cycles, ... |
| 15:8 | R/W | 0 | In SPI slave mode, Dummy cycle number for writing status 0 = 1 cycle, 1= 2 cycles, ... |
| 7:0 | R/W | 0 | In SPI slave mode, Dummy cycle number for reading status 0 = 1 cycle, 1= 2 cycles, ... |

SPI Slave register 3**0xffd1403C**

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:24 | R/W | 0 | In SPI slave mode, Command value for writing status, when bit27 "SPI slave command define enable" in SPI Slave register is 1 |

| | | | |
|-------|-----|---|--|
| 23:16 | R/W | 0 | In SPI slave mode, Command value for reading status, when bit27 "SPI slave command define enable" in SPI Slave register is 1 |
| 15:8 | R/W | 0 | In SPI slave mode, Command value for writing buffer, when bit27 "SPI slave command define enable" in SPI Slave register is 1 |
| 7:0 | R/W | 0 | In SPI slave mode, Command value for reading buffer, when bit27 "SPI slave command define enable" in SPI Slave register is 1 |

SPI controller cache 0~7**0xffd14040~0xffd1405c**

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:0 | R/W | 0 | Cache line Word 0~7. Cache is used to read data both for AHB or APB read command. Cache is also used for APB page programming etc. |

SPI controller buffer 8~15**0xffd14060~0xffd1407c**

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:0 | R/W | 0 | Buffer Word 8. Buffer is used to read/write data only for APB read/write user commands. |

14. I/O Interface

This part describes A311D's I/O interfaces from the following aspects:

- USB
- Ethernet
- SDIO
- Transport Interface and Transport Stream Demux
- IR Remote
- SAR ADC
- I2C
- UART
- PWM

Confidential!
nick@khadas.com

14.1 Universal Serial Bus

14.1.1 Overview

The chip integrates one USB XHCI OTG 2.0 ports, one USB3.0 and PCIe 2.0 combo interface up to 5Gbps, supports 2 configurations:

- 1 USB2.0 OTG + 1 USB 2.0 Host + 1 PCIe
- 1 USB2.0 OTG + 1 USB3.0 (No PCIe)

14.1.2 Features

The USB2.0 OTG controller features:

- Support for the following speeds: High-Speed (HS, 480-Mbps), Full-Speed (FS, 12-Mbps) and Low-Speed (LS, 1.5-Mbps) modes
- Multiple DMA/non DMA mode access support on the application side
- Supports up to 16 bidirectional endpoints, including control endpoint 0.
- Supports Session Request Protocol (SRP) and Host Negotiation Protocol (HNP)
- Supports up to 16 host channels.
- Supports ACA ID detector, refer to Amlogic USB2.0 OTG ID Detector Specification.pdf for detail

The USB2.0 Host controller features:

- Support for the following speeds: High-Speed (HS, 480-Mbps), Full-Speed (FS, 12-Mbps) and Low-Speed (LS, 1.5-Mbps) modes
- Multiple DMA/non DMA mode access support on the application side
- Supports up to 16 host channels.

The USB2.0 PHY features:

- Support for the following speeds: High-Speed (HS, 480-Mbps), Full-Speed (FS, 12-Mbps) and Low-Speed (LS, 1.5-Mbps) modes
- The USB3.0 Host controller features:
- Support for the following speed: Super-Speed, High-Speed, Full-Speed and Low-Speed
- Compliant with the xHCI specification

The USB3.0 SS PHY features:

- 5-Gbps SuperSpeed data transmission rate over 3-m USB 3 cable
- Integrated PHY includes transmitter, receiver, spread spectrum clock (SSC) generation, PLL, digital core, and electrostatic discharge (ESD) protection circuits
- Supports legacy Half-rate mode for power-saving

14.1.3 Register Description

Base address:

PHY 20: 0xff63_6000.

PHY 21: 0xff63_A000.

For the following registers, each register's final address= base address + offset *4.

14.2 PCIE

14.2.1 Overview

PCIE module includes PCIE controller and PCIE PHY.

14.2.2 Register Description

PCIE PHY Register

Each register's final address = 0xFF644000 + offset*4

Register0 0x00

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 4 | | 1 | Pcs_common_clocks, 0: Reference clock not common 1: Common reference clock |
| 3:2 | | 2 | Pipe_port_sel Config the X2 PHY used as two X1. |
| 1 | | 0 | Phy_ref_use_pad 0 : select internal reference clock 1 : select external reference clock. |
| 0 | | 0 | Phy_test_powerdown 0: normal operation 1: Power down |

Register1 0x01

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:25 | | 25 | phy_mpll_multiplier, MPLL frequency multiplier control |
| 24 | | 0 | phy_ref_clkdiv2, Input reference clock divider control |
| 23:21 | | 4 | phy_los_bias 000:reserved 001:45mv, 010:60mv, 011:75mv, 100:90mv, 101:105mv, 110:120mv, 111: 135mv |
| 20:16 | | 9 | phy_los_level, Loss of signal detector sensitivity level control |
| 15:13 | | 2 | phy_rx0_eq, RX equalizer setting for Lane 0 |
| 12:10 | | 2 | phy_rx1_eq, RX equalizer setting for Lane 1 |
| 9:05 | | 0 | phy_tx0_term_offset, Transmitter termination offset for Lane 0 |
| 4:00 | | 0 | phy_tx1_term_offset, Transmitter termination offset for Lane 1 |

Register2 0x02

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------|
| 20:18 | | 4 | phy_tx_vboost_lvl |
| 17:12 | | 24 | pcs_tx_deemph_gen1 |
| 11:06 | | 24 | pcs_tx_deemph_gen2_3p5db |
| 5:00 | | 35 | pcs_tx_deemph_gen2_6db |

Register3 0x03

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------|
| 13:7 | | 120 | pcs_tx_swing_full |
| 6:0 | | 120 | pcs_tx_swing_low |

Register4 0x04

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 19 | | 0 | phy_cr_cap_addr, CR capture address |
| 18 | | 0 | phy_cr_cap_data, CR capture data |
| 17:2 | | 0 | phy_cr_data_in, CR address and write data input bus |
| 1 | | 0 | phy_cr_read, CR read |
| 0 | | 0 | phy_cr_write, CR write |

Register5 0x05

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------------------------|
| 17 | R | | phy_bs_out, BS output |
| 16 | R | | phy_cr_ack, CR ack |
| 15:0 | R | | phy_cr_data_out, CR data bus output |

Register6 0x06

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------------|
| 16:12 | | 4 | phy_acjt_level |
| 11 | | 0 | phy_bs_capture_dr |
| 10 | | 0 | phy_bs_clamp |
| 9 | | 0 | phy_bs_clk |
| 8 | | 0 | phy_bs_extest |
| 7 | | 0 | phy_bs_extest_ac |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------|
| 6 | | 0 | phy_bs_highz |
| 5 | | 0 | phy_bs_in |
| 4 | | 0 | phy_bs_init |
| 3 | | 0 | phy_bs_invert |
| 2 | | 0 | phy_bs_preload |
| 1 | | 0 | phy_bs_shift_dr |
| 0 | | 0 | phy_bs_update_dr |

PCIE Controller registers

For PCIE A, each register's final address = 0xFF646000 + offset*4;

For PCIE B, each register's final address = 0xFF648000 + offset*4

Register0 0x00

14.3 Ethernet

14.3.1 Overview

The Ethernet MAC controller provides a complete Ethernet interface from the chip to a Reduced Gigabit Media Independent Interface(RGMII) compliant Ethernet PHY.

14.3.2 Ethernet MAC

14.3.2.1 Features

Ethernet MAC has the following features:

- 10/100/1000 MAC 3.70a
- RGMII/RMII
- AHB 32 Bits internal bus
- RX FIFO 4KB, TX FIFO 2KB
- 2 MAC addresses
- EEE
- Power Management

14.3.2.2 RegisterDescription

PRG_ETH_REG0 0xff634540

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R/W | 0 | Set AHB to DDR interface as urgent. |
| 30 | R/W | 0 | RGMII mode Use RX_CLK as TX_CLK. |
| 29-27 | R/W | 0 | RMII & RGMII mode Select one signal from {RXDV, RXD[3:0]} to calibrate. |
| 26 | R/W | 0 | RMII & RGMII mode 0: test falling edge 1: test rising edge |
| 25 | R/W | 0 | RMII & RGMII mode Start calibration logic |
| 24-20 | R/W | 0 | RMII & RGMII mode 5 Bits correspondent to {RXDV, RXD[3:0]}, set to 1 will delay the data capture by 1 cycle. |
| 19-15 | R/W | 0 | Set bit14 to 0. RMII & RGMII mode Capture input data at clock index equal to adj_delay. |
| 14 | R/W | 0 | Set RXDV and RXD setup time, data is aligned with index 0. When set to 1, auto delay and skew |
| 13 | R/W | 0 | RMII & RGMII mode Enable data delay adjustment and calibration logic. |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 12 | R/W | 0 | RMII & RGMII mode Enable TX_CLK and PHY_REF_CLK generator. |
| 11 | R/W | 0 | RMII mode Use inverted internal clk_rmii_i to generate 25/2.5 tx_rx_clk. |
| 10 | R/W | 0 | Generate 25MHz clock for PHY |
| 9-7 | R/W | 0 | RMII & RGMII mode, 000: invalid value. 001: mp2_clk_out is 250MHz. 010: mp2_clk_out is 500MHz. ... Mp2_clk_out is "ratio" *250MHz. |
| 6-5 | R/W | 0 | RGMII mode, TX_CLK related to TXD 00: clock delay 0 cycle. 01: clock delay ¼ cycle. 10: clock delay ½ cycle. 11: clock delay ¾ cycle. |
| 4 | R | 0 | Unused |
| 3 | R/W | 0 | RMII mode CLK_RMII RGMII mode RX_CLK Use inverted signal when set to 1. |
| 2 | R/W | 0 | Sideband Descriptor Endianness Control Function: When set high, this signal configures the DMA to transfer descriptors in reverse endianness of the data format. When low (by default), the descriptors are transferred in the same endian format as the data. This signal is sampled during active reset (including soft-reset) only and ignored after reset is de-asserted. |
| 1 | R/W | 0 | Sideband Data Endianness Control Function: When set high, this signal configures the DMA to transfer data in big-endian format. When low (by default), the data is transferred in little-endian format. This signal is sampled during active reset (including soft-reset) only and ignored after reset is de-asserted. |
| 0 | R/W | 0 | PHY Interface Select Function: These pins select one of the multiple PHY interfaces of MAC. This is sampled only during reset assertion and ignored after that. 1: internal value 001: RGMII 0: internal value 100: RMII |

PRG_ETH_REG1 0xff634544

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31-16 | R | 0 | Unused |

| | | | |
|-------|-----|---|---|
| 15 | R/W | 0 | The result is valid |
| 14 | R/W | 0 | The results is rising edge test or falling edge test. |
| 13-11 | R/W | 0 | The signal under test. |
| 10 | R/W | 0 | The Calibration logic is waiting for event. |
| 9-5 | R/W | 0 | The RX_CLK length in 1ns. |
| 4-0 | R/W | 0 | Signal switch position in 1ns. |

14.3.3 Ethernet PHY

14.3.3.1 Features

Ethernet PHY has the following features:

- Integrated IEEE 802.3/802.3u compliant 10/100Mbps Ethernet PHY
- Supporting both full and half-duplex for either 10 or 100 Mb/s data rate
- Auto MDIX capable
- Supports wake-on-LAN,
- 100Base-T support
- MII/RMII/SMII interface
- Supports auto-negotiation
- Full set of power down modes
- Interface available to 100Base-FX Fiber-PMD
- Serial Management Interface (SMI)
- Fix configurations for LED status indicators
- Supporting military temperature range -20C to 80C
- Perfect mix of analog and digital lends itself to robustness, portability, and performance
- Multiple input clock options
- Stand-alone core

14.3.3.2 RegisterDescription

ETH_PHY_DBG_CTL0 0xFF64C000

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------|
| [7:0] | R/W | 0 | ETH digital debug registers |

ETH_PHY_DBG_CTL1 0xFF64C004

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------|
| [23:0] | R/W | 0 | ETH digital debug registers |

ETH_PHY_DBG_CFG0 0xFF64C008

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------|
| [31:0] | R/W | 0 | ETH digital debug registers |

ETH_PHY_DBG_CFG1 0xFF64C00c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------|
| [31:0] | R/W | 0 | ETH digital debug registers |

ETH_PHY_DBG_CFG2 0xFF64C010

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------|
| [31:0] | R/W | 0 | ETH digital debug registers |

ETH_PHY_DBG_CFG3 0xFF64C014

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------|
| [31:0] | R/W | 0 | ETH digital debug registers |

ETH_PHY_DBG_CFG4 0xFF64C018

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------|
| [31:0] | R/W | 0 | ETH digital debug registers |

ETH_PLL_STS 0xFF64C040

| Bit(s) | R/W | Default | Description |
|---------|-----|---------|--------------------|
| [31] | R | | eth_mppll_lock |
| [30] | R | | eth_mppll_lock_dig |
| [29:10] | R | | reserved |
| [9:0] | R | | eth_mppll_reg_out |

ETH_PLL_CTL0 0xFF64C044

| Bit(s) | R/W | Default | Description |
|---------|-----|---------|---------------------|
| [31] | R | | eth_mppll_lock |
| [30] | R | | eth_mppll_lock_dig |
| [29] | R/W | | eth_mppll_reset |
| [28] | R/W | | eth_mppll_en |
| [27] | R/W | | eth_mppll_fast_lock |
| [26] | R/W | | eth_mppll_lock_f |
| [25:24] | R/W | | eth_mppll_lock_long |
| [23] | R/W | | eth_mppll_sel_ref |
| [22] | R/W | | eth_mppll_load |

| Bit(s) | R/W | Default | Description |
|---------|-----|---------|--------------------|
| [21] | R/W | | eth_mppll_sdm_en |
| [20] | R/W | | eth_mppll_tdc_mode |
| [19:15] | R/W | | reserved |
| [14:10] | R/W | | eth_mppll_n |
| [9] | R/W | | reserved |
| [8:0] | R/W | | eth_mppll_m |

ETH_PLL_CTL1 0xFF64C048

| Bit(s) | R/W | Default | Description |
|---------|-----|---------|-----------------------|
| [31:28] | R/W | | eth_mppll_filter_pvt1 |
| [27:24] | R/W | | eth_mppll_filter_pvt2 |
| [23] | R/W | | eth_mppll_filter_mode |
| [22:20] | R/W | | eth_mppll_lambda0 |

14.4 Inter-Integrated Circuit (I2C)

14.4.1 Overview

Inter-Integrated Circuit (IIC or I2C) is a multi-slave serial communication bus between ICs. A311D integrates the I2C interface and signals allowing communications with other I2C peripheral devices.

14.4.2 Features

The I²C Master Module has the following features:

- Support for 7-bit and 10-bit addressable devices
- Programmable bus speed including standard speed (100kBits/s) and fast speed (400kBits/sec)
- Error transfer detection
- “Transfer complete” indication by polling or interrupt (Interrupts handled by the ISA module. See the ISA module for details).
- Internal buffer holding up to 8 bytes for transfer (in either direction)
- Flexible architecture allowing the software to dictate the format of the I²C bit streams
- Manual setting of the I²C bus to accommodate a software only mode

14.4.3 RegisterDescription

For I2C module in EE domain, each register final address = 0x FF805000 + offset * 4 for master mode, final address = 0x FF806000 + offset * 4 for slave mode.

I2C_M_0_CONTROL_REG 0x7c00

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R/W | 0 | CNTL_JIC: There is internal logic to dynamically enable the gated clocks. If this gated clock logic doesn't work, you can set This bit to always enable the clock. Setting This bit wastes power. |
| 30 | R | 0 | Unused |
| 29-28 | R/W | 0 | QTR_CLK_EXT: These two Bits extend the clock divider to 12 Bits: QTR_CLK = {[29:28],[21:12]} |
| 27 | R | 0 | unused |
| 26 | R | 0 | Read back level of the SDA line |
| 25 | R | 0 | Read back level of the SCL line |
| 24 | R/W | 0 | Sets the level of the SDA line if manual mode is enabled. If This bit is '0', then the SDA line is pulled low. If This bit is '1' then the SDA line is tri-stated. |
| 23 | R/W | 0 | Sets the level of the SCL line if manual mode is enabled. If This bit is '0', then the SCL line is pulled low. If This bit is '1' then the SCL line is tri-stated. |
| 22 | R/W | 0 | This bit is used to enable manual mode. Manual I2C mode is controlled by Bits 12,13,14 and 15 above. |
| 21:12 | R/W | 0x142 | QTR_CLK_DLY. This value corresponds to period of the SCL clock divided by 4 Quarter Clock Delay = * System Clock Frequency For example, if the system clock is 133Mhz, and the I2C clock period is 10uS (100khz), then Quarter Clock Delay = * 133 Mhz = 332 |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 11:8 | R | - | READ_DATA_COUNT: This value corresponds to the number of bytes READ over the I2C bus. If this value is zero, then no data has been read. If this value is 1, then Bits [7:0] in TOKEN_RDATA_REG0 contains valid data. The software can read this register after an I2C transaction to get the number of bytes to read from the I2C device. |
| 7:4 | R | - | CURRENT_TOKEN: This value reflects the current token being processed. In the event of an error, the software can use this value to determine the error location. |
| 3 | R | - | ERROR: This read only Bit is set if the I2C device generates a NACK during writing. This bit is cleared at on the clock cycle after the START Bit is set to 1 indicating the start of list processing. Errors can be ignored by setting the ACK_IGNORE Bit(s) below. Errors will be generated on Writes to devices that return NACK instead of ACK. A NACK is returned by a device if it is unable to accept any more data (for example because it is processing some other real-time function). In the event of an ERROR, the I2C module will automatically generate a STOP condition on the bus. |
| 2 | R | - | STATUS: This bit reflects the status of the List processor: 0: IDLE 1: Running. The list processor will enter this state on the clock cycle after the START Bit is set. The software can poll the status register to determine when processing is complete. |
| 1 | R/W | 0 | ACK_IGNORE: Set to 1 to disable I2C ACK detection. The I2C bus uses an ACK signal after every byte transfer to detect problems during the transfer. Current Software implementations of the I2C bus ignore this ACK. This bit is for compatibility with the current Amlogic software. This bit should be set to 0 to allow NACK operations to abort I2C bus transactions. If a NACK occurs, the ERROR bit above will be set. |
| 0 | R/W | 0 | START: Set to 1 to start list processing. Setting This bit to 0 while the list processor is operating causes the list processor to abort the current I2C operation and generate an I2C STOP command on the I2C bus. Normally This bit is set to 1 and left high until processing is complete. To re-start the list processor with a new list (after a previous list has been exhausted), simply set This bit to zero then to one. |

I2C_M_0_SLAVE ADDRESS 0x7c01

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:29 | R | 0 | Reserved |
| 28 | R/W | 0 | USE_CNTL_SCL_LOW: If This bit is set to 1, then Bits[27:16] control the SCL low time. |
| 27:16 | R/W | 0 | SCL Low delay. |
| 15:14 | R | 0 | Unused |
| 13-11 | R/W | 0 | SCL_FILTER: A filter was added in the SCL input path to allow for filtering of slow rise times. 0 = no filtering, 7 = max filtering |
| 10:8 | R/W | 0 | SDA_FILTER: A filter was added in the SDA input path to allow for filtering of slow rise times. 0 = no filtering, 7 = max filtering |
| 7:0 | R/W | 0x00 | SLAVE_ADDRESS. This is a 7-bit value for a 7-bit I2C device, or (0xF0 {A9,A8}) for a 10-bit I2C device. By convention, the slave address is typically stored in by first left shifting it so that it's MSB is D7 (The I2C bus assumes the 7-bit address is left shifted one). Additionally, since the SLAVE address is always an 7-bit value, D0 is always 0. NOTE: The I2C always transfers 8-bits even for address. The I2C hardware will use D0 to dictate the direction of the bus. Therefore, D0 should always be '0' when this register is set. |

I2C_M_0_TOKEN_LIST_REG0 0x7c02

The register below describes the first 8 tokens in the token list.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:28 | R/W | 0x00 | 8th token in the list to process |
| 27:24 | R/W | 0x00 | 7th token in the list to process |
| 23:20 | R/W | 0x00 | 6th token in the list to process |
| 19:16 | R/W | 0x00 | 5th token in the list to process |
| 15:12 | R/W | 0x00 | 4th token in the list to process |
| 11:8 | R/W | 0x00 | 3rd token in the list to process |
| 7:4 | R/W | 0x00 | 2nd token in the list to process |
| 3:0 | R/W | 0x00 | 1st token in the list to process (See the table below for token definitions) |

Table 14-1 Token Definitions

| Command Token | Value | Data | Description |
|------------------|-------|--------|--|
| END | 0x0 | N/A | Used to tell the I2C module that this is the end of the Token list. This token is not associated with the I2C bus, but rather with the state-machine that drives the token list processor. |
| START | 0x1 | N/A | The START Token is used to tell an I2C device that this is the beginning of an I2C transfer |
| SLAVE_ADDR-WRITE | 0x2 | 7-bits | This bit-sequence is used to address a device and tell the device it is being WRITTEN |
| SLAVE_ADDR-READ | 0x3 | 7-bits | This bit sequence is used to address a device and tell the device it is being READ. |
| DATA | 0x4 | 8-bits | This 8-bit byte sequence is a byte transfer (READ or WRITE). The DATA token corresponds to a WRITE if it follows a SLAVE_ADDR-WRITE token. The DATA token corresponds to a READ if it follows a SLAVE_ADDR-READ token. |
| DATA-LAST | 0x5 | 8-bits | Used to indicate the last 8-bit byte transfer is a byte transfer of a READ. |
| STOP | 0x6 | N/A | This tells the I2C device it is no longer being addressed |

Write data associated with the DATA token should be placed into the I2C_TOKEN_WDATA_REG0 or I2C_TOKEN_WDATA_REG1 registers. Read data associated with the DATA or DATA-LAST token can be read from the I2C_TOKEN_RDATA_REG0 or I2C_TOKEN_RDATA_REG1 registers.

I2C_M_0_TOKEN_LIST_REG1 0x7c03

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------------|
| 31:28 | R/W | 0x00 | 16th token in the list to process |

| | | | |
|-------|-----|------|-----------------------------------|
| 27:24 | R/W | 0x00 | 15th token in the list to process |
| 23:20 | R/W | 0x00 | 14th token in the list to process |
| 19:16 | R/W | 0x00 | 13th token in the list to process |
| 15:12 | R/W | 0x00 | 12th token in the list to process |
| 11:8 | R/W | 0x00 | 11th token in the list to process |
| 7:4 | R/W | 0x00 | 10th token in the list to process |
| 3:0 | R/W | 0x00 | 9th token in the list to process |

I2C_M_0_TOKEN_WDATA_REG0 0x7c04

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | R/W | 0x00 | 4th data byte written for a DATA (write) token. |
| 23:16 | R/W | 0x00 | 3rd data byte written for a DATA (write) token. |
| 15:8 | R/W | 0x00 | 2nd data byte written for a DATA (write) token. |
| 7:0 | R/W | 0x00 | 1st data byte written for a DATA (write) token. |

I2C_M_0_TOKEN_WDATA_REG1 0x7c05

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | R/W | 0x00 | 8th data byte written for a DATA (write) token. |
| 23:16 | R/W | 0x00 | 7th data byte written for a DATA (write) token. |
| 15:8 | R/W | 0x00 | 6th data byte written for a DATA (write) token. |
| 7:0 | R/W | 0x00 | 5th data byte written for a DATA (write) token. |

I2C_M_0_TOKEN_RDATA_REG0 0x7c06

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:24 | R/W | 0x00 | 4th data byte read for a DATA or DATA-LAST (READ) token. |
| 23:16 | R/W | 0x00 | 3rd data byte read for a DATA or DATA-LAST (READ) token. |
| 15:8 | R/W | 0x00 | 2nd data byte read for a DATA or DATA-LAST (READ) token. |
| 7:0 | R/W | 0x00 | 1st data byte read for a DATA or DATA-LAST (READ) token. |

I2C_M_0_TOKEN_RDATA_REG1 0x7c07

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:24 | R/W | 0x00 | 8th data byte read for a DATA or DATA-LAST (READ) token. |
| 23:16 | R/W | 0x00 | 7th data byte read for a DATA or DATA-LAST (READ) token. |

| | | | |
|------|-----|------|--|
| 15:8 | R/W | 0x00 | 6th data byte read for a DATA or DATA-LAST (READ) token. |
| 7:0 | R/W | 0x00 | 5th data byte read for a DATA or DATA-LAST (READ) token. |

I2C_M_1_ 0x7800~0x7807

See I2C_M_0

I2C_M_2_ 0x7400~0x7407

See I2C_M_0

I2C_M_3_ 0x7000~0x7007

See I2C_M_0

For I2C module in AO domain, each register final address = 0x FF805000 + offset * 4 for master mode, final address = 0x FF806000 + offset * 4 for slave mode.

AO_I2C_M_0_CONTROL_REG 0x0

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | CNTL_JIC: There is internal logic to dynamically enable the gated clocks. If this gated clock logic doesn't work, you can set this bit to always enable the clock. Setting this bit wastes power. |
| 30 | R | 0 | Unused |
| 29-28 | R/W | 0 | QTR_CLK_EXT: These two bits extend the clock divider to 12 bits: QTR_CLK = {[29:28],[21:12]} |
| 27 | R | 0 | unused |
| 26 | R | 0 | Read back level of the SDA line |
| 25 | R | 0 | Read back level of the SCL line |
| 24 | R/W | 0 | Sets the level of the SDA line if manual mode is enabled. If this bit is '0', then the SDA line is pulled low. If this bit is '1' then the SDA line is tri-stated. |
| 23 | R/W | 0 | Sets the level of the SCL line if manual mode is enabled. If this bit is '0', then the SCL line is pulled low. If this bit is '1' then the SCL line is tri-stated. |
| 22 | R/W | 0 | This bit is used to enable manual mode. Manual I2C mode is controlled by bits 12,13,14 and 15 above. |
| 21:12 | R/W | 0x142 | QTR_CLK_DLY. This value corresponds to period of the SCL clock divided by 4 Quarter Clock Delay = * System Clock Frequency For example, if the system clock is 133Mhz, and the I2C clock period is 10uS (100khz), then Quarter Clock Delay = * 133 Mhz = 332 |
| 11:8 | R | - | READ_DATA_COUNT: This value corresponds to the number of bytes READ over the I2C bus. If this value is zero, then no data has been read. If this value is 1, then bits [7:0] in TOKEN_RDATA_REG0 contains valid data. The software can read this register after an I2C transaction to get the number of bytes to read from the I2C device. |
| 7:4 | R | - | CURRENT_TOKEN: This value reflects the current token being processed. In the event of an error, the software can use this value to determine the error location. |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 3 | R | - | ERROR: This read only bit is set if the I2C device generates a NACK during writing. This bit is cleared at on the clock cycle after the START bit is set to 1 indicating the start of list processing. Errors can be ignored by setting the ACK_IGNORE bit below. Errors will be generated on Writes to devices that return NACK instead of ACK. A NACK is returned by a device if it is unable to accept any more data (for example because it is processing some other real-time function). In the event of an ERROR, the I2C module will automatically generate a STOP condition on the bus. |
| 2 | R | - | STATUS: This bit reflects the status of the List processor: 0: IDLE 1: Running. The list processor will enter this state on the clock cycle after the START bit is set. The software can poll the status register to determine when processing is complete. |
| 1 | R/W | 0 | ACK_IGNORE: Set to 1 to disable I2C ACK detection. The I2C bus uses an ACK signal after every byte transfer to detect problems during the transfer. Current Software implementations of the I2C bus ignore this ACK. This bit is for compatibility with the current Amlogic software. This bit should be set to 0 to allow NACK operations to abort I2C bus transactions. If a NACK occurs, the ERROR bit above will be set. |
| 0 | R/W | 0 | START: Set to 1 to start list processing. Setting this bit to 0 while the list processor is operating causes the list processor to abort the current I2C operation and generate an I2C STOP command on the I2C bus. Normally this bit is set to 1 and left high until processing is complete. To re-start the list processor with a new list (after a previous list has been exhausted), simply set this bit to zero then to one. |

AO_I2C_M_0_SLAVE_ADDR 0x1

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:29 | R | 0 | Unused |
| 28 | R/W | 0 | USE_CNTL_SCL_LOW: If this bit is set to 1, then bits[27:16] control the SCL low time. |
| 27:16 | R/W | 0 | SCL Low delay. This is a new feature in M8baby. In the previous M8baby design, the SCL low time was controlled by bits[21:12] of the register above. In this design, the SCL delay is controlled independently by these bits. |
| 15:14 | R | 0 | Unused |
| 13:11 | R/W | 0 | SCL_FILTER: A filter was added in the SCL input path to allow for filtering of slow rise times. 0 = no filtering, 7 = max filtering |
| 10:8 | R/W | 0 | SDA FILTER: A filter was added in the SDA input path to allow for filtering of slow rise times. 0 = no filtering, 7 = max filtering |
| 7:0 | R/W | 0x00 | SLAVE_ADDRESS. This is a 7-bit value for a 7-bit I2C device, or (0xF0 {A9,A8}) for a 10-bit I2C device. By convention, the slave address is typically stored in by first left shifting it so that it's MSB is D7 (The I2C bus assumes the 7-bit address is left shifted one). Additionally, since the SLAVE address is always an 7-bit value, D0 is always 0. NOTE: The I2C always transfers 8-bits even for address. The I2C hardware will use D0 to dictate the direction of the bus. Therefore, D0 should always be '0' when this register is set. |

AO_I2C_M_0_TOKEN_LIST0 0x2

The register below describes the first 8 tokens in the token list.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
|--------|-----|---------|-------------|

| | | | |
|-------|-----|------|--|
| 31:28 | R/W | 0x00 | 8th token in the list to process |
| 27:24 | R/W | 0x00 | 7th token in the list to process |
| 23:20 | R/W | 0x00 | 6th token in the list to process |
| 19:16 | R/W | 0x00 | 5th token in the list to process |
| 15:12 | R/W | 0x00 | 4th token in the list to process |
| 11:8 | R/W | 0x00 | 3rd token in the list to process |
| 7:4 | R/W | 0x00 | 2nd token in the list to process |
| 3:0 | R/W | 0x00 | 1st token in the list to process (See the table below for token definitions) |

Table 14-2 Token Definitions

| Command Token | Value | Data | Description |
|------------------|-------|--------|--|
| END | 0x0 | N/A | Used to tell the I2C module that this is the end of the Token list. This token is not associated with the I2C bus, but rather with the state-machine that drives the token list processor. |
| START | 0x1 | N/A | The START Token is used to tell an I2C device that this is the beginning of an I2C transfer |
| SLAVE_ADDR-WRITE | 0x2 | 7-bits | This bit-sequence is used to address a device and tell the device it is being WRITTEN |
| SLAVE_ADDR-READ | 0x3 | 7-bits | This bit sequence is used to address a device and tell the device it is being READ. |
| DATA | 0x4 | 8-bits | This 8-bit byte sequence is a byte transfer (READ or WRITE). The DATA token corresponds to a WRITE if it follows a SLAVE_ADDR-WRITE token. The DATA token corresponds to a READ if it follows a SLAVE_ADDR-READ token. |
| DATA-LAST | 0x5 | 8-bits | Used to indicate the last 8-bit byte transfer is a byte transfer of a READ. |
| STOP | 0x6 | N/A | This tells the I2C device it is no longer being addressed |

Write data associated with the DATA token should be placed into the I2C_TOKEN_WDATA_REG0 or I2C_TOKEN_WDATA_REG1 registers. Read data associated with the DATA or DATA-LAST token can be read from the I2C_TOKEN_RDATA_REG0 or I2C_TOKEN_RDATA_REG1 registers.

AO_I2C_M_0_TOKEN_LIST1 0x3

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-----------------------------------|
| 31:28 | R/W | 0x00 | 16th token in the list to process |
| 27:24 | R/W | 0x00 | 15th token in the list to process |
| 23:20 | R/W | 0x00 | 14th token in the list to process |
| 19:16 | R/W | 0x00 | 13th token in the list to process |
| 15:12 | R/W | 0x00 | 12th token in the list to process |

| | | | |
|------|-----|------|-----------------------------------|
| 11:8 | R/W | 0x00 | 11th token in the list to process |
| 7:4 | R/W | 0x00 | 10th token in the list to process |
| 3:0 | R/W | 0x00 | 9th token in the list to process |

AO_I2C_M_0_WDATA_REG0 0x4

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | R/W | 0x00 | 4th data byte written for a DATA (write) token. |
| 23:16 | R/W | 0x00 | 3rd data byte written for a DATA (write) token. |
| 15:8 | R/W | 0x00 | 2nd data byte written for a DATA (write) token. |
| 7:0 | R/W | 0x00 | 1st data byte written for a DATA (write) token. |

AO_I2C_M_0_WDATA_REG1 0x5

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31:24 | R/W | 0x00 | 8th data byte written for a DATA (write) token. |
| 23:16 | R/W | 0x00 | 7th data byte written for a DATA (write) token. |
| 15:8 | R/W | 0x00 | 6th data byte written for a DATA (write) token. |
| 7:0 | R/W | 0x00 | 5th data byte written for a DATA (write) token. |

AO_I2C_M_0_RDATA_REG0 0x6

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:24 | R/W | 0x00 | 4th data byte read for a DATA or DATA-LAST (READ) token. |
| 23:16 | R/W | 0x00 | 3rd data byte read for a DATA or DATA-LAST (READ) token. |
| 15:8 | R/W | 0x00 | 2nd data byte read for a DATA or DATA-LAST (READ) token. |
| 7:0 | R/W | 0x00 | 1st data byte read for a DATA or DATA-LAST (READ) token. |

AO_I2C_M_0_RDATA_REG1 0x7

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:24 | R/W | 0x00 | 8th data byte read for a DATA or DATA-LAST (READ) token. |
| 23:16 | R/W | 0x00 | 7th data byte read for a DATA or DATA-LAST (READ) token. |
| 15:8 | R/W | 0x00 | 6th data byte read for a DATA or DATA-LAST (READ) token. |
| 7:0 | R/W | 0x00 | 5th data byte read for a DATA or DATA-LAST (READ) token. |

AO_I2C_M_0_TIMEOUT_TH 0x8

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31:24 | R/W | 0x00 | 8th data byte read for a DATA or DATA-LAST (READ) token. |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 23:16 | R/W | 0x00 | 7th data byte read for a DATA or DATA-LAST (READ) token. |
| 15:8 | R/W | 0x00 | 6th data byte read for a DATA or DATA-LAST (READ) token. |
| 7:0 | R/W | 0x00 | 5th data byte read for a DATA or DATA-LAST (READ) token. |

AO_I2C_S_CONTROL_REG 0x0

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-29 | R | 0 | REG POINTER: There are 5 internal registers inside the I2C slave module. The I2C Master sets this value using the byte that follows the address byte in the I2C data stream. Register 4 (numbered 0,1,...4) is the status register. |
| 28 | R/W | 0 | SEND READY: This bit is set to '1' by the ARC to indicate to the slave machine that the I2C slave module is ready to send data. This bit is cleared by the I2C module when it has sent 4 bytes to the I2C master. This bit is also available in the status register that can be read by the I2C master. The I2C master can read the status register to see when the I2C slave module has data to send. |
| 27 | R/W | 0 | RECEIVE READY: This bit is set to '1' by the ARC to indicate to the slave machine that the I2C slave module is ready to receive data. This bit is cleared by the I2C module when it has received 4 bytes from the I2C master. This bit is also available in the status register that can be read by the I2C master. The I2C master can read the status register to see when the I2C slave module is ready to receive data. |
| 26 | R | 0 | BUSY: Read only status bit. '1' indicates that the I2C slave module is sending or receiving data. |
| 25 | R/W | 0 | IRQ_EN: If this bit is set, then an interrupt will be sent to the ARC whenever 4 bytes have been read or 4 bytes have been written to the I2C slave module. |
| 24 | R/W | 0 | ACK Always: Typically the ACK of a slave I2C device is dependent upon the availability of data (if reading) and room to store data (when we are being written). Our I2C module has a status register that can be read continuously. This bit can be set if the I2C master wants to continually read the status register. |
| 23-16 | R/W | 0 | Slave Address: Bits [7:1] are used to identify the device. Bit [0] is ignored since this corresponds to the R/W bit. |
| 15-8 | R/W | 0x27 | HOLD TIME: Data hold time after the falling edge of SCL. This hold time is computed as Hold time = (MPEG system clock period) * (value + 1). |
| 7 | R/W | 0 | Enable: A '1' enables the I2C slave state machine. |
| 6-0 | R/W | 0x06 | Sampling rate. Defined as MPEG system clock / (value + 1). The SDA and SCL inputs into the slave module are sampled as a way of filtering the inputs. A rising or falling edge is determined by when 3 successive samples are either high or low respectively. |

AO_I2C_S_SEND_REG: Send Data 0x1

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-0 | R/W | 0 | The I2C slave module can send up to 4 bytes of data starting with the byte located at bits [7:0] |

AO_I2C_S_RECV_REG: Received Data 0x2

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-0 | R | 0 | This read only register corresponds to the 4 bytes of data written to the I2C slave module by an external I2C master. Bits [7:0] correspond to the first byte written by the I2C master. |

AO_I2C_S_CNTL1_REG 0x3

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-6 | R | 0 | Unused |
| 5-3 | R/W | 0 | SCL_FILTER: A filter was added in the SCL input path to allow for filtering of slow rise times. 0 = no filtering, 7 = max filtering |
| 2-0 | R/W | 0x00 | SDA FILTER: A filter was added in the SDA input path to allow for filtering of slow rise times. 0 = no filtering, 7 = max filtering |

14.5 Universal Asynchronous Receiver And Transmitter

14.5.1 Overview

There are a number of UART's in the chip that offer 2-wire (RX/TX) and 4-wire (RX/TX, CTS/RTS) connections at the digital I/O pins. Each UART contains one transmit FIFO and a receive FIFO (see depths below). The FIFO's are filled by the CPU and read by the CPU. In some cases, the receive FIFO can be configured to be pushed directly to DDR memory without CPU intervention.

Table 14-3 UART List

| UART | RX/TX FIFO depths | RX FIFO DMA to DDR | Comment |
|-----------|-------------------|--------------------|---------------------------------|
| UART_EE_A | 128 bytes | Yes | Located in the EE domain |
| UART_EE_B | 64 bytes | Yes | Located in the EE domain |
| UART_EE_C | 64 bytes | Yes | Located in the EE domain |
| UART0-AO | 64 bytes | No | Located in the Always On domain |
| UART2-AO | 64 bytes | No | Located in the Always On domain |

14.5.2 Features

Input filters: The CTS (clear to send) and RX (receive) input paths have input filters to deal with slow rise times. The filters are configurable to use a 125nS or 1uS sampling mechanism. There is an implied 3 system clock cycle delay (15nS for a typical system clock of 200Mhz) that is used to synchronize and detect the rising/falling edge of the RXD signal. The RXD signal may be passed through an optional filter to deglitch the external signal in noisy conditions. The deglitch filter has two settings which add to the "detection delay" of the RXD signal by the internal logic:

- Filter setting 1 (125nS strobe): 375nS ~ 2.6uS
- Filter setting 2 (1uS strobe): 3uS ~ 21uS

The filter is described in the register specification. If the filter is disabled, the shortest RXD low time and high time is 12 system clock cycles (60nS for a system clock of 200Mhz).

Clear to Send: CTS is a signal sent from the receiver UART back to the transmitting UART to tell the transmitting UART to stop sending data. The CTS signal must be received before the next START symbol is sent. The transmitting UART is allowed to send one more byte after the CTS signal is recognized. The CTS signal coming into the chip goes through some synchronization and detection which adds an additional 5 system clocks (typically 25nS for a 200Mhz system clock). This setup time for CTS detection is called CTS_{stop}. The CTS input also has an optional filter can be used to deglitch the incoming CTS signal. If the filter is disabled, the CTS signal must be de-asserted 5 system clock cycles before the start of the next BYTE transfer. If the CTS filter is enabled, then additional time must be added to the 25nS requirement. There are two programmable filter settings that effectively delay CTS being seen by the internal logic:

- Filter setting 1 (125nS strobe): 375nS ~ 2.6uS
- Filter setting 2 (1uS strobe): 3uS ~ 21uS

Interrupts: The UARTs can generate interrupts if the receive FIFO exceeds a pre-programmed threshold. An interrupt can also be generated if there is a frame or parity error.

Clock independent operation: Because the system clock can be altered to accommodate dynamic frequency scaling, the UARTs have an option in which they use the 24Mhz crystal clock as the source for the UART.

14.5.3 FunctionalDescription

The UART requires that a Baud Rate be established. The UART supports rates as slow as 1Hz up to rates as high as 8 MBits/Sec. Once the baud rate has been established, bytes are transmitted as they are written to the transmit-FIFO by the CPU. A large transmit-FIFO exists to allow the CPU to pre-load a transmit package because the CPU can often write faster than the UART can transmit the data.

Data this automatically received by the UART is placed into the receive FIFO one byte at a time. The receive-FIFO decouples the UART from the CPU allowing the CPU to read the UART byte data at a rate not dictated by the UART.

14.5.4 RegisterDescription

The following registerDescription is uniformly applied to all UART instantiations in the chip.

Base_adr:0xffd00000

Final_adr = base_adr + offset *4

UART_EE_A = 128x8 FIFOs

UART_EE_B = 64x8 FIFOs

UART_EE_C = 64x8 FIFOs

UART_EE_A_WFIFO: Write data 0x9000

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-8 | R | 0 | unused |
| 7-0 | R/W | - | Write FIFO data. The Write FIFO holds 128 or 64 bytes. The Write FIFO can be written as long as it is not full. |

UART_EE_A_RFIFO: Read Data 0x9001

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-8 | R | 0 | unused |
| 7-0 | R/W | - | Read FIFO data. The Read FIFO holds 128 or 64 bytes. The empty flag can be used to determine if data is available |

UART_EE_A_CONTROL: UART Mode 0x9002

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | Invert the RTS signal |
| 30 | R/W | 0 | Mask Error: Set to 1 to mask errors |
| 29 | R/W | 0 | Invert the CTS signal |
| 28 | R/W | 0 | Transmit byte Interrupt: Set to 1 to enable the generation an interrupt whenever a byte is read from the transmit FIFO |
| 27 | R/W | 0 | Receive byte Interrupt: Set to 1 to enable the generation an interrupt whenever a byte is written to the receive FIFO |
| 26 | R/W | 0 | Set to 1 to invert the TX pin |
| 25 | R/W | 0 | Set to 1 to invert the RX pin |

| | | | |
|-------|-----|-------|--|
| 24 | R/W | 0 | Clear Error |
| 23 | R/W | 0 | Reset the receive state machine |
| 22 | R/W | 0 | Reset the transmit state machine |
| 21-20 | R/W | 0 | Character length: 00 = 8 Bits, 01 = 7 Bits, 10 = 6 Bits, 11 = 5 Bits |
| 19 | R/W | 1 | Parity Enable: Set to 1 to enable parity |
| 18 | R/W | 0 | Parity type: 0 = even, 1 = odd |
| 17-16 | R/W | 0 | Stop bit length: 00 = 1 bit, 01 = 2 Bits |
| 15 | R/W | 0 | Two Wire mode: |
| 14 | R/W | 0 | Unused |
| 13 | R/W | 0 | Receive Enable. Set to 1 to enable the UART receive function |
| 12 | R/W | 0 | Transmit Enable. Set to 1 to enable the UART transmit function |
| 11-0 | R/W | 0x120 | Old Baud rate |

UART_EE_A_STATUS: UART Status 0x9003

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-27 | R | 0 | Unused |
| 26 | R | 0 | UART_RECV_BUSY: This bit will be 1 if the uart receive state machine is busy |
| 25 | R | 0 | UART_XMIT_BUSY: This bit will be 1 if the uart transmit state machine is busy |
| 24 | R | 0 | RECV_FIFO_OVERFLOW: |
| 23 | R | 0 | CTS Level |
| 22 | R | 0 | Transmit FIFO Empty |
| 21 | R | 0 | Transmit FIFO Full |
| 20 | R | 0 | Receive FIFO empty |
| 19 | R | 0 | Receive FIFO full |
| 18 | R | 0 | This bit is set if the FIFO is written when it is full. To clear This bit, write bit 24 of register 0x2132 |
| 17 | R | 0 | Frame error. To clear This bit, write bit 24 of register UART_EE_A_CONTROL |
| 16 | R | 0 | Parity error. To clear This bit, write bit 24 of register UART_EE_A_CONTROL |
| 15 | R | 0 | Unused |
| 14-8 | R | 0 | Transmit FIFO count. Number of bytes in the transmit FIFO |
| 7 | R | 0 | Unused |

| | | | |
|-----|---|---|---|
| 6-0 | R | 0 | Receive FIFO count. Number of bytes in the receive FIFO |
|-----|---|---|---|

UART_EE_A_MISC: UART IRQ CONTROL 0x9004

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | Added a "just in case" bit that can be set to 1 to enable clocks always. The default is 0 meaning the auto-clock gating logic is enabled. |
| 30 | R/W | 0 | USE old Rx Baud: There was a bug in the RX baud rate generator. The Rx baud rate generator was re-designed to compute a baud rate correctly. If you want to use the old (stupid) logic, you can set This bit to 1. |
| 29 | R/W | 0 | ASYNC_FIFO_PURGE: This bit can be set to 1 after all UART bytes have been received in order to purge the data into the Async FIFO. This bit is needed because the UART receives 8-bit data, but the ASYNC FIFO can only be written with 16-bit data. In this case there might be a residual byte if the UART is not receiving an even number of bytes. |
| 28 | R/W | 0 | ASYNC_FIFO_EN: If This bit is set to 1, then the UART received data is automatically sent to the Async FIFO module which will in turn automatically send the data to DDR memory |
| 27 | R/W | 0 | CTS: Filter Timebase select: 1 = 1uS, 0 = 111nS timebase. A filter was added to the CTS input to allow for a little digital filtering. The amount of filtering is controlled by this timebase (longer = more filtering) and the value in Bits FILTER_SEL below. |
| 26-24 | R/W | 0 | CTS: FILTER_SEL: 0 = no filter, 7 = max filtering |
| 23-20 | R/W | 0 | old BAUD_RATE_EXT: These 4 Bits extend the baud rate divider to 16-bits: Baud Rate = {Reg4[23:20],Reg2[11:0]} |
| 19 | R/W | 0 | RX: Filter Timebase select: 1 = 1uS, 0 = 111nS timebase. A filter was added to the RX input to allow for a little digital filtering. The amount of filtering is controlled by this timebase (longer = more filtering) and the value in Bits FILTER_SEL below. |
| 18-16 | R/W | 0 | RX: FILTER_SEL: 0 = no filter, 7 = max filtering |
| 15-8 | R/W | 32 | XMIT_IRQ_CNT: The UART can be configured to generate an interrupt if the number of bytes in the transmit FIFO drops below this value. |
| 7:0 | R/W | 15 | RECV_IRQ_CNT: The UART can be configured to generate an interrupt after a certain number of bytes have been received by the UART. |

UART_EE_A_REG5 0x9005

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-28 | R/W | 0 | unused |
| 27 | R/W | 0 | Xtal2_clk_sel: 0: see Xtal_clk_sel 1: xtal_div2(12M) |
| 26 | R/W | 0 | Xtal_clk_sel: 0: xtal_div3(8M); 1: xtal(24M);(need set xtal_tick_en =1 first); |
| 24 | R/W | 0 | USE_XTAL_CLK: If this bit is set, then the clock for generating the UART Baud rate comes from the crystal pad. This allows the UART to operate independent of clk81. |

| | | | |
|------|-----|----|--|
| 23 | R/W | 0 | USE New Baud rate. Over the years, the baud rate has been extended by concatenating bits from different registers. To take advantage of the full 23-bit baud rate generate (extended to 23 bits to accommodate very low baud rates), you must set this bit. If this bit is set, then the baud rate is configured using bits [22:0] below |
| 22:0 | R/W | 15 | NEW_BAUD_RATE: If bit[23] = 1 above, then the baud rate for the UART is computed using these bits. This was added in M6 to accommodate lower baud rates. |

14.6 Infrared Remote

14.6.1 Overview

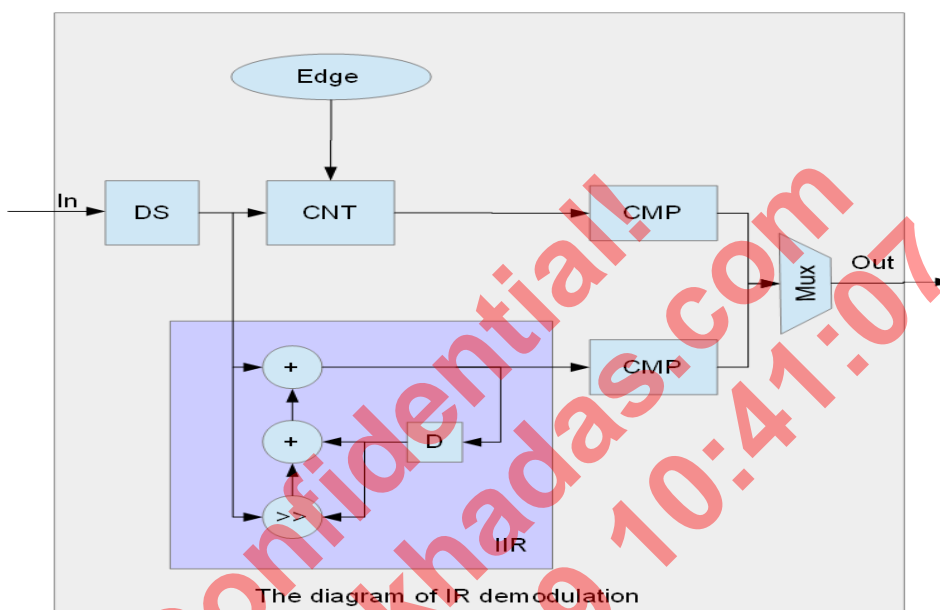

IR module includes 3 sub modules: IR demodulation, Legacy IR remote control and Multi-format IR remote control.

14.6.2 IR Demodulation

IR demodulation module demodulate the modulate signal to get the envelop signal.

IR demodulation diagram is shown below.

Figure 14-1 IR Demodulation Diagram

It implements two methods for demodulation. The input data is an one-bit stream.

The input data are down-sampled firstly. The rate of downsample are configured by register, ranges from 0 to 255.

One method is implemented in the upper path.

The CNT is used to counte the time for '0' and '1'. It is cleared when input data changes(from 1 to 0 or from 0 to 1).

When $(CNT > \text{REG_IR_PROCT1} \ \&\& \ \text{in} == 1)$, it outputs '1'. REG_IR_PROCT1 is used to canceled the glitch. Actually, the operation of downsample also have some utility to cancel the glitch.

When $(CNT > \text{REG_IR_DECT0} \ \&\& \ \text{in} == 0)$, it outputs '0'. REG_IR_DECT0 is used to confirm the '0'. The value should be bigger than one carrier period.

The other method is implemented in the lower path.

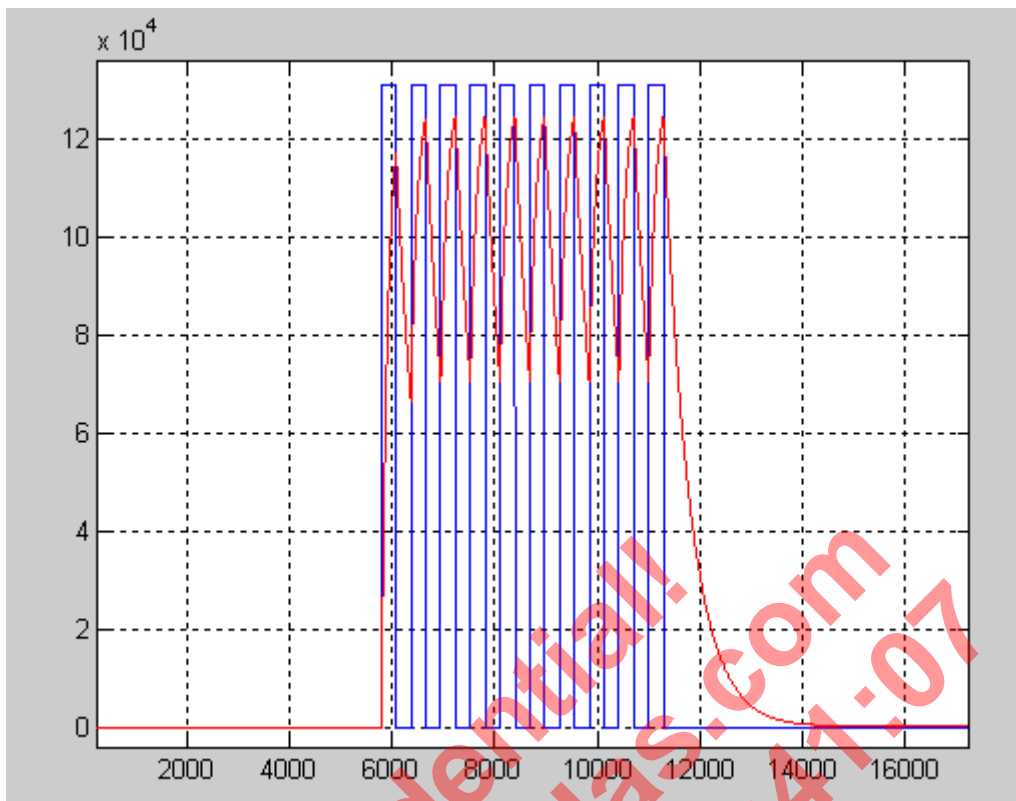

It is a one tap IIR filter. The input data control the integrating factor and the factor can be configured from registers. When 1 inputs, the accumulator can grow quickly. When 0 input, the accumulator decays slowly, and when the number of 0 is bigger enough, it decays soon.

When $(\text{accum} > \text{REG_IR_IIR_THD1})$, it outputs '1'.

When $(\text{accum} < \text{REG_IR_IIR_THD0})$, it outputs '0'.

The diagram shows the simple simulation result. The blue is the input data, the red is the filter out.

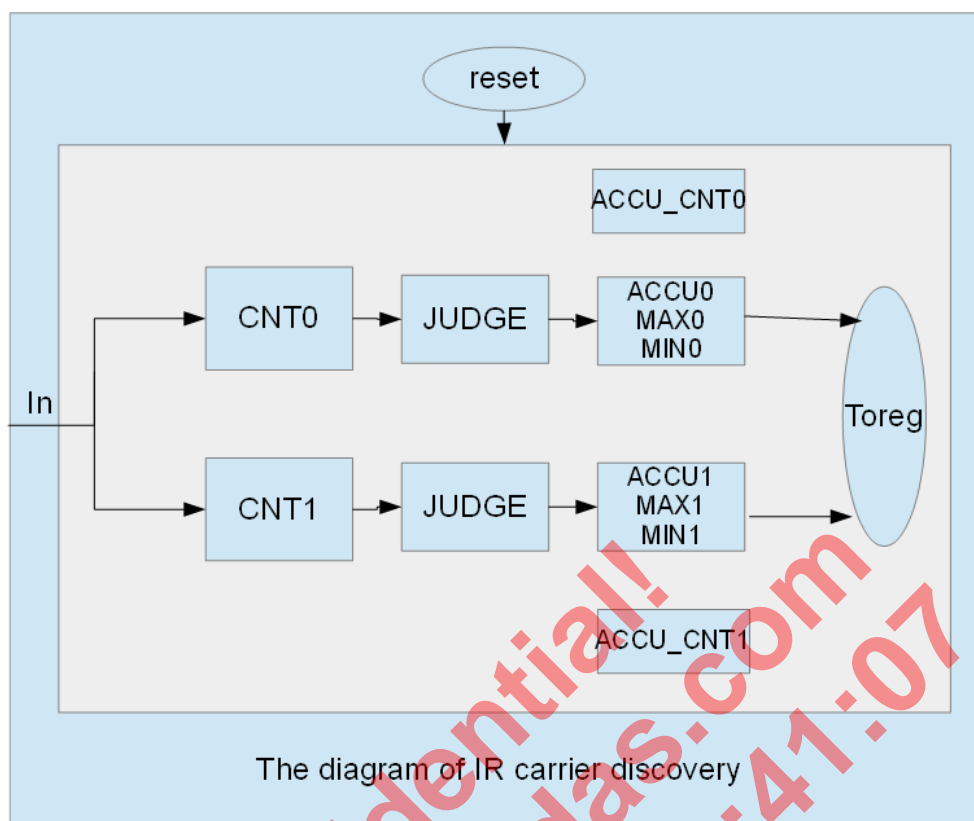

Figure 14-2 Simulation Result of IR Demulation

Because the input carrier signal is a rectangular wave signal, the carrier can be estimated easily by count the wave period. For estimating precisely, the counter for the long "0" and start period and and glitch should be removed.

The simple diagram is shown below:

Figure 14-3 IR Carrier Discovery

CNT is the counter for time of “0” and “1”.

JUDGE is used to remove the long “0” and glitch.

ACC_CNT is the counter for number of accumulating. If ACC_CNT== REG_IR_ST_CNT_THD, then write the value to registers.

For example:

Set REG_IR_ST_CNT_THD to 256, then accumulates 256 times.

The carrier can be calculated:

$$F_c = F_{sys}/(RO_IR_SUM_CNT0 + RO_IR_SUM_CNT1)*256;$$

$$DUT = RO_IR_SUM_CNT1/(RO_IR_SUM_CNT0 + RO_IR_SUM_CNT1);$$

Where F_c is the carrier frequency, F_{sys} is the system clock frequency, DUT is the carrier duty ratio.

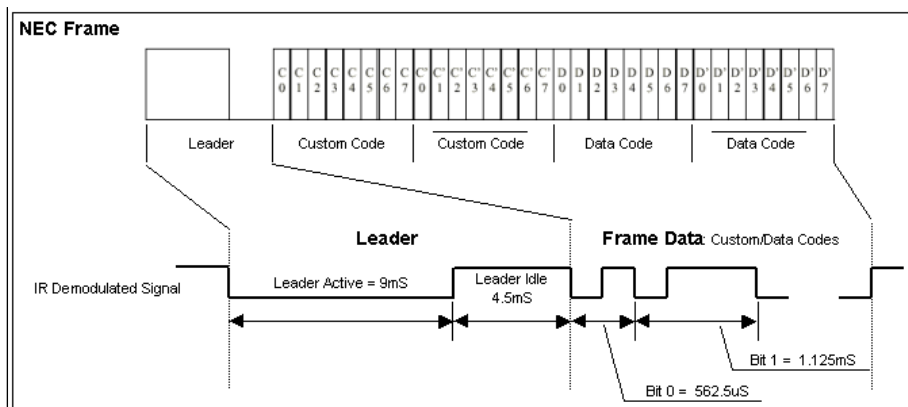

14.6.3 Legacy IR Control

The Legacy IR Remote control module has two modes of operation:

- NEC Frame decoder mode
- General Time Measurement mode

NEC Frame Decoder. The NEC Frame Decoder mode operates by analyzing the waveform of a TV

Figure 14-4 NEC Frame Decoder

remote.

The waveform has a number of components, each of which must fit within a time window to be considered valid. If the entire waveform meets the specifications described by the registers below, then the TV remote codes are captured and an interrupt is generated.

General Time Measurement: Some remotes don't follow the standard NEC format, so additional registers provide the ability to measure the time between rising and/or falling edges of the IR signal. Since the time measurement is done in hardware, the software only needs to read a "width" measurement from a register for every rising and/or falling edge event.

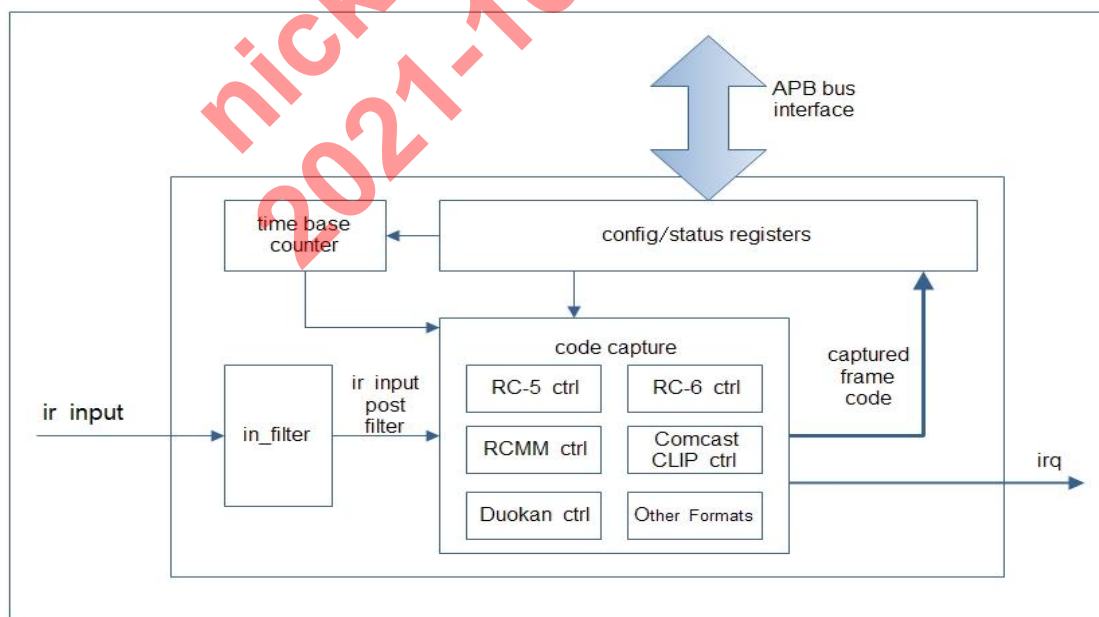

14.6.4 Multi Format IR Control

The decoder mainly consisted of two blocks:

- Decoder with input filter
- A set of registers including control & clock, data and tuning

The function diagram of IR decoder is illustrated in the figure below.

Figure 14-5 IR Decoder Function Block

IR Decoder decodes the IR remote control input signal. 13 operation modes are supported:

- Hardware Decode IR transmission protocol compatible frame decoder mode (NEC MITSUBISHI Thomson Toshiba Sony SIRC RC5 RC6 RCMM Duokan Comcast Sanyo Modes)
- General programmable time measurement frame decoder mode (General Mode)

In Hardware Decode Mode, the Decoder uses signal pattern search mechanism to decode data frame. It can detect logical '0', '1', "00", "01", "10" and "11", as well as data frame start and end. Whenever Decoder detects and decodes the data frame, the data are kept in data register.

In General Mode, the Decoder uses edge detection mechanism to decode data frame. It can detect each input signal edge and record the time between two edges. The time measurement result is kept in control register.

The user should set proper operation mode corresponding to the selection of remote controller.

There is a simple time-based signal Filter between the signal input and the Decoder. The Filter is programmable and helps to improve signal integrity.

14.6.5 RegisterDescription

The following registerDescription is uniformly applied to all UART instantiations in the chip.

Base_adr: 0xff808000

Final_adr = base_adr + offset *4

AO_IR_DEC_DEMOD_CNTL0 0x30

| Bits | R/W | Default | Description |
|-------|-----|---------|--|
| 31 | | | Ir demodulator soft_reset:write 1 to reset ir_demodulator,will auto clr to 0 |
| 30 | | | Reg_ir_fd_reset :It is used to reset the carrier detection module.write 1 to reset ,will auto clr to 0 |
| 29 | | | Reg_ir_demod_mode:It is used to set the demod mode. 0 = count mode; 1 = iir mode.default is 0 |
| 28 | | | Ir demodulator clk gate bypass:write 1 will bypass clk gate,default is 0 |
| 27:16 | | | Reg_ir_st_cnt_thd:It is used to set the statistics number for carrier detection.default is 0x40 |
| 15:8 | | | Reg_ir_ds_rate:It is used to set the downsample rate.default is 0x8 |
| 7:4 | | | Reg_ir_fsft_1:It is used to set the shift value for input data "1".default is 0x7 |
| 3:0 | | | Reg_ir_fsft_0:It is used to set the shift value for input data "0".default is 0x9 |

AO_IR_DEC_DEMOD_CNTL1 0x31

| Bits | R/W | Default | Description |
|-------|-----|---------|---|
| 31 | | | Reg_ir_demod_en:ir demod enable ,default is 0 |
| 30 | | | Reg_ir_inv:ir input invert, invert input at 1.default is 0 |
| 29:16 | | | Reg_ir_proctect1:It is used to set the protection threshold for 1. It is used to filter the glitch.default is 0xa |
| 13:0 | | | Reg_ir_detect0:It is used to set the detection threshold for signal "0".default is 0x3e8 |

AO_IR_DEC_DEMOD_IIR_THD 0x32

| Bits | R/W | Default | Description |
|-------|-----|---------|--|
| 31:16 | | | Reg_ir_iir_thd1:It is used to set the detection threshold for "1" in iir mode.default is 0xdac |
| 15:0 | | | Reg_ir_iir_thd0:It is used to set the detection threshold for "0" in iir mode.default is 0xdac |

AO_IR_DEC_DEMOD_THD0 0x33

| Bits | R/W | Default | Description |
|-------|-----|---------|---|
| 29:16 | | | Reg_ir_thd0_low:It is used to set the low threshold for "0" when statistics.default is 0x12c |
| 13:0 | | | Reg_ir_thd0_high:It is used to set the high threshold for "0" when statistics.default is 0x1770 |

AO_IR_DEC_DEMOD_THD1 0x34

| Bits | R/W | Default | Description |
|-------|-----|---------|---|
| 29:16 | | | Reg_ir_thd1_low:It is used to set the low threshold for "1" when statistics.default is 0x12c |
| 13:0 | | | Reg_ir_thd1_high:It is used to set the high threshold for "1" when statistics.default is 0x1770 |

AO_IR_DEC_DEMOD_SUM_CNT0 0x35

| Bits | R/W | Default | Description |
|------|-----|---------|---|
| 25:0 | | | Ro_ir_sum_cnt0:It is used to report the sum value for the statistics data "0".READ ONLY |

AO_IR_DEC_DEMOD_SUM_CNT1 0x36

| Bits | R/W | Default | Description |
|------|-----|---------|---|
| 25:0 | | | Ro_ir_sum_cnt1:It is used to report the sum value for the statistics data "1".READ ONLY |

AO_IR_DEC_DEMOD_CNT0 0x37

| Bits | R/W | Default | Description |
|-------|-----|---------|---|
| 29:16 | | | Ro_ir_max_cnt0:It is used to report the maximum value for the statistics data "0".READ ONLY |
| 13:0 | | | Ro_ir_min_cnt0:It is used to report the minimum value for the statistics data "0".READ ONLY |

AO_IR_DEC_DEMOD_CNT1 0x38

| Bits | R/W | Default | Description |
|-------|-----|---------|---|
| 29:16 | | | Ro_ir_max_cnt1:It is used to report the maximum value for the statistics data "1".READ ONLY |
| 13:0 | | | Ro_ir_min_cnt1:It is used to report the minimum value for the statistics data "1".READ ONLY |

AO_IR_DEC_LDR_ACTIVE: Leader Active Time 0x00

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-29 | R | 0 | unused |
| 28-16 | R/W | 0x1d8 | Max Leader ACTIVE time: 9.44mS assuming base rate = 20uS |
| 15-13 | R | 0 | unused |
| 12-0 | R/W | 0x1ac | Min Leader ACTIVE time: 8.56mS assuming base rate = 20uS |

This register controls the min/max leader active time window. For most TV remote controls, the leader active time is about 9mS. The values in this register correspond to counts of the base rate programmed by register 0x2124

AO_IR_DEC_LDR_IDLE: Leader Idle Time 0x01

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-26 | R | 0 | unused |
| 28-16 | R/W | 0xf8 | Max Leader IDLE time: 4.96mS assuming base rate = 20uS |
| 15-13 | R | 0 | unused |
| 12-0 | R/W | 0xca | Min Leader IDLE time: 4.04mS assuming base rate = 20uS |

This register controls the min/max leader IDLE time window. For most TV remote controls, the leader idle time is about 4.5mS. The values in this register correspond to counts of the base rate programmed by register: 0x2124

AO_IR_DEC_LDR_REPEAT: Repeat Leader Idle Time 0x02

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-26 | R | 0 | Unused |
| 25-16 | R/W | 0x7a | Max REPEAT Leader IDLE time: 2.44mS assuming base rate = 20uS |
| 15-10 | R | 0 | unused |
| 9-0 | R/W | 0x66 | Min REPEAT Leader IDLE time: 2.04mS assuming base rate = 20uS |

This register controls the repeat leader IDLE time window. The repeat key uses the standard leader active time (9ms) but a shorter leader idle time.

AO_IR_DEC_BIT_0: BIT 0 Identification Time 0x03

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-26 | R | 0 | Unused |
| 25-16 | R/W | 0x42 | Max BIT 0 time: 1.32mS assuming base rate = 20uS |
| 15-10 | R | 0 | Unused |
| 9-0 | R/W | 0x2e | Min BIT 0 time: 0.92mS assuming base rate = 20uS |

This register controls the min/max BIT 0 time window. For most TV remote controls, the bit 0 time is about 1.125mS. The values in this register correspond to counts of the base rate programmed by register: 0x2124

AO_IR_DEC_REG0: Base Rate Generator 0x04

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R | 0 | Just in case bit. Normally this bit is set to 0 so that the auto-clock gating is enabled. If there is a problem related to the auto-clock gating, then this bit can be set to one to disable the auto-clock gating. |
| 30-28 | R/W | 0 | FILTER_COUNT: This is a new feature to Nike. The IR remote input now has a simple filter that accommodates slow rise times by providing a little hysteresis. The logic works as follows. If the input is low, then an input signal will only be considered HIGH if it remains high for (FILTER_COUNT * 111nS). Similarly, if the input is currently high, it will only be considered LOW if the input signal remains low for (FILTER_COUNT * 111nS). |
| 27-25 | R | 0 | Unused |
| 24-12 | R/w | 0xFA0 | Max Frame Time. 80mS assuming base rate = 20uS This value is used to determine if a code is a repeat code (e.g. leader followed by no data for this amount of time). This value can also be used to catch slow remote codes (i.e. code sequences that are longer than expected). |
| 11-0 | R/W | 0x13 | This value dictates the base rate time for all measurements associated with the IR decoder. In the past, the base rate was divided from the system clock. In the current design, the base rate is divided from a fixed 1uS timer. This 1uS timer is constant and doesn't change (even when the system clock does) Base rate = (count + 1) * 1uS |

This register controls the master rate generator for all width measurements made by the IR decoder module.

AO_IR_DEC_FRAME: Frame Data 0x05

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-0 | R | 0 | Frame Data. Format: {custom code, ~custom code, data, ~data} |

Note: New keys will be ignored until this register is read if the *hold first key* bit is set in the decode control register. Reading this register resets an internal hold first flag.

AO_IR_DEC_STATUS: Frame Status 0x06

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | Sim faster: Reserved |
| 30 | R/W | 0 | BIT_1_MATCH_EN: Set this bit to 1 to enable qualification of bit 1 times. In the previous IR decoder module, frame detection only looked at the BIT 0 time to identify a zero bit. If a zero bit time wasn't found, then it was assumed that the bit was a 1. In the updated IR decoder module, the module will look at the BIT 0 time to find zero bits, and the BIT 1 time to find 1 bits. If the width of a pulse doesn't match the zero or the one bit width time, then the frame is considered invalid. |
| 29-20 | R/W | 0x89 | Max BIT 1 time: 2.74mS assuming base rate = 20uS |
| 19-10 | R/W | 0x57 | Min BIT 1 time: 1.74mS assuming base rate = 20uS |

| | | | |
|-----|---|---|--|
| 9 | R | - | IRQ Status. 1 if there is an interrupt |
| 8 | R | - | IR Decoder input. This is the level of the digital signal coming into the IR module for decoding. This is the same as reading the I/O pad level. |
| 7 | R | - | BUSY. 1 if the decoder is busy |
| 6-4 | R | 0 | Decoder Status: For debug only 000: OK 001: last frame timed out 010: leader time error (invalid IR signal) 011: repeat error (repeat leader, but other IR transitions found). 100: Invalid bit |
| 3-0 | R | 0 | Frame Status Bit 3: Frame data valid Bit 2: data code error (data != ~data in IR bit stream) Bit 1: custom code error (custom_code != ~custom_code in IR bit stream) Bit 0: 1 = repeat key, 0 = standard key |

AO_IR_DEC_REG1: Decode / Interrupt Control 0x07

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R | 0 | Unused |
| 30 | R/W | 0 | CNTL_1uS_EQ_CLK: This bit should be set to 1 if the clk81 (system clock) is less than 50 Mhz. |
| 29 | R/W | 0 | CNTL_111nS_EQ_CLK: This bit should be set to 1 if the clk81 (system clock) is less than 50 Mhz. |
| 28-16 | R | 0 | Time measurement since the last time the internal time counter was reset by the rising and/or falling edge of the IR signal. The selection of reset on rising and/or falling edge is determined by the selection of the IRQ (Bits 3-2 below) |
| 15 | R/W | 1 | ENABLE: If this bit is 1, then the state-machines are enabled. If this bit is zero, then the state-machines cleanup and immediately return to idle. |
| 14 | R/W | 0 | USE SYSTEM CLOCK: This is a new feature. 1 = use the system clock, 0 = use the 1uS timebase tick. During normal operation, the module is setup to create a 20uS tick from the 1uS internal timebase of the chip. If the chip is configured to operate using the 32khz RTC oscillator, the 1uS timebase is invalid and therefore the 20uS timebase is invalid. In order to measure time correctly, the IR remote circuit can use the system clock (which in this case is the 32khz oscillator clock) as the master timebase. |
| 13-9 | R/W | 1f | Number of bits in the IR frame (N-1) |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 8-7 | R/W | 1f | Decoder mode 00: NEC Frames: Decode Leader and 32 bits 01: Only accumulate bits (skip the leader) 10: Measure Mode: The internal width measuring counter is reset on the rising and/or falling edge of the IR remote signal based on the settings of IRQ Selection below. Just before being reset, the measured width is captured and stored so that it can be read in bits [28:16] of this register. 11: NEC Frames: Decode Leader and 32 bits |
| 6 | R/W | 1 | Hold First Key. If this bit is set true, then the frame data register (0x2125) will only be updated if hasn't already been updated. Once updated, the frame data register will not be updated again until it has been read. This bit can be used to guarantee the first TV remote code captured will not be overwritten by subsequent transmissions from a TV remote. NOTE: You must read the frame data register to clear an internal hold first flag if this bit is set. |
| 5-4 | R/W | 11 | Frame mask. These bits are used to qualify frames for capture. 00: Capture all frames good or bad 01: Capture only frames where data=~data. Ignore custom codes 10: Capture only frames where custom_code = ~custom_code. Ignore data codes 11: Capture only frames where (data=~data) and (custom_code = ~custom_code) |
| 3-2 | R/W | 0 | IRQ Selection and width measurement reset: 00: IR Decoder done 01: IR input rising or falling edge detected 10: IR input falling edge detected 11: IR rising edge detected |
| 1 | R/W | 0 | IR Polarity. Polarity of the input signal (VD[0]) |
| 0 | R/W | 0 | Set to 1 to reset the IR decoder. This is useful because the IR remote state machine thinks in terms of milliseconds and may take tens of milliseconds to return to idle by itself. |

AO_MF_IR_DEC_LDR_ACTIVE: Leader Active control 0x10

This register controls the min/max Leader Active time window. For example, for NEC format, the Leader Active time is about 9mS. To identify a Leader Active time between 8.60 mS and 9.40 mS (assuming base resolution = 20uS), user can set Max duration = 0x1d6 ('d470) to represent 9.40 mS, and set Min duration = 0x1ae ('d430) to represent 8.60 mS.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--------------------------------------|
| 31-29 | R | 0 | Unused |
| 28-16 | R/W | 0 | Max duration of Leader's active part |
| 15-13 | R | 0 | Unused |
| 12-0 | R/W | 0 | Min duration of Leader's active part |

AO_MF_IR_DEC_LDR_IDLE: Leader Idle control 0x11

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
|--------|-----|---------|-------------|

| | | | |
|-------|-----|---|------------------------------------|
| 31-29 | R | 0 | Unused |
| 28-16 | R/W | 0 | Max duration of Leader's idle part |
| 15-13 | R | 0 | Unused |
| 12-0 | R/W | 0 | Min duration of Leader's idle part |

AO_MF_IR_DEC_LDR_REPEAT: Repeat Leader Idle Time 0x12

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-26 | R | 0 | Unused |
| 25-16 | R/W | 0 | Max duration of Repeat Code's Leader. In NECformat, it defines for the repeat leader's idle part. In Toshiba format, it defines for the repeat leader's second idle part (In Toshiba format, the repeat leader's first idle part has the same duration time as the normal leader idle part.) |
| 15-10 | R | 0 | Unused |
| 9-0 | R/W | 0 | Min duration of Repeat Code's Leader |

AO_MF_IR_DEC_BIT_0 0x13

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-26 | R | 0 | Unused |
| 25-16 | R/W | 0 | Max duration of Duration Setting Register 0. It defines max timing duration for: Logic"0" for NEC/Toshiba/Sony/Thomas format or Half trailer bit for RC6 format (RC6's half trailer bit typically 888.89us) or time of Duokan/RCMM/4ppm format's Logic "00" |
| 15-10 | R | 0 | Unused |
| 9-0 | R/W | 0 | Min duration of Duration Setting Register 0. |

AO_MF_IR_DEC_REG0 0x14

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R/W | 0 | Clock gating control just in case. Set 1 can force clock gating disabled. |
| 30-28 | R/W | 0 | Filter ctrl. Set the monitor timing for input filter, bigger value means longer monitor time. Value 0 = no filtering. |
| 27-25 | R | 0 | Unused |

| | | | |
|-------|-----|---|---|
| 24-12 | R/W | 0 | Max frame time. Max duration of one whole frame. |
| 11-0 | R/W | 0 | Base time parameter. Used to generate the timing resolution. Resolution = (base_time_paramter + 1) * (1/ Freq_sys_clk). For example, if Frequency of sys_clk is 1Mhz, and base_time_parameter=19, Then resolution = (19+1)*(1uS) = 20uS. |

AO_MF_IR_DEC_STATUS 0x16

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R/W | 0 | Frame data valid 1. (This bit is set to 1 when a captured frame is updated/stored into "FrameBody_1" register. A read of "FrameBody_1" register will clear This bit. "FrameBody_1" register is used to store the over 32bit MSBs of the formats whose length is more than 32 bit) |
| 30 | R/W | 0 | bit_1_match_en. Set to 1 to enable the check of whether logic"1" bit matches timing configure during the frame input process. |
| 29-20 | R/W | 0 | Max Duration 1. Max duration of Duration Setting Register 1. It defines max duration for: Logic"1" for NEC/Toshiba/Sony format or Whole trailer bit for RC6 format (RC6's whole trailer bit typically 1777.78us) or time of Duokan/RCMM/4ppm format's Logic "01" |
| 19-10 | R/W | 0 | Min Duration 1. Min duration of Duration Setting Register 1. |
| 9 | R | 0 | irq_status. Appear as 1 if there is an interrupt. |
| 8 | R | 0 | ir_i_sync. IR remote serial input after synchronization. This is the level of the digital signal coming into the IR module for decoding. This is the same as reading the I/O pad level. |
| 7 | R | 0 | Busy. When =1, means state machine is active. |
| 6-4 | R | 0 | Decoder_status (for debug only). 000: OK 001: last frame timed out 010: leader time error (invalid IR signal) 011: repeat error (repeat leader, but other IR transitions found). 100: Invalid bit |
| 3-0 | R | 0 | Frame status. bit 3: Frame data valid (This bit is set to 1 when a captured frame is updated/stored into "FrameBody" register. A read of "FrameBody" register will clear This bit. |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| | | | <p>If store and read occurs at the same time, This bit is set to 1 in common, But if “Hold first” is set to true and this valid Bit is already 1, a read clear takes precedence and This bit is clear to 0.)</p> <p>bit 2: data code error (data != ~data in IR bit stream)</p> <p>bit 1: custom code error (custom_code != ~custom_code in IR bit stream)</p> <p>bit 0: 1 = received frame is repeat key, 0 = received frame is normal key</p> |

AO_MF_IR_DEC_REG1 0x17

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R/W | 0 | Set to 1 to use faster timebase. . |
| 30 | R/W | 0 | cntl_1us_eq_clk. Just use sys_clk to relace 1uS tick. |
| 29 | R/W | 0 | cntl_xtal3_eq_clk. Just use sys_clk to relace 111ns tick. |
| 28-16 | R | 0 | <p>Pulse Width Counter. It stores the internal counter of pulse width duration. Commonly used as time measurement when decode_mode is set to measure width mode (software decode).</p> <p>Time measurement starts at the last time the internal time counter was reset by the rising and/or falling edge of the IR signal. The selection of reset on rising and/or falling edge is determined by the IRQ Selection field (Bits 3-2 below)</p> |
| 15 | R/W | 0 | <p>Enable.</p> <p>1 = enable the state machine of IR decoder.</p> <p>0 = disable the state machine of IR decoder.</p> |
| 14 | R/W | 0 | <p>cntl_use_sys_clk. Use sys_clk for the timebase. It's useful when sys_clk at low frequency (such as 32Khz) and cannot create 1uS timebase tick.</p> <p>1 = use the system clock as timebase.</p> <p>0 = use the 1uS timebase tick as timebase.</p> |
| 13-8 | R/W | 0 | <p>bit_length minus 1. (N-1).</p> <p>Used to set the value of frame body's bit length (frame body commonly includes address and data code part). If a format has 24 bit frame body, this value shall be set to 23.</p> |
| 7 | R/W | 0 | <p>Record_at_error.</p> <p>1= record the frame body and status forcibly, even if data/custom code error check enabled by frame_mask and relative error occurs.</p> <p>0 = if data/custom code error check enabled by frame_mask and relative error occurs, not record the frame body and status forcibly</p> |
| 6 | R/W | 0 | <p>Hold_first</p> <p>Used to hold the first captured frame data. If This bit is set to 1, then the “FrameBody/FrameBody_1” register will only be updated if hasn't already been updated. Once updated, the “FrameBody/FrameBody_1” register will not be updated again until it has been read. This bit can be used to guarantee the first TV remote code captured will not be overwritten by subsequent transmissions from a TV remote.</p> <p>NOTE: Read the “FrameBody” register can clear the internal “Frame data valid” flag, and read the “FrameBody_1” register can clear the “Frame data valid 1” flag.</p> |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 5-4 | R/W | 0 | <p>Frame_mask.</p> <p>Some formats' body include bit-inversed data or custom/address code for error check.</p> <p>00 = ignore error check from either data or custom/address code</p> <p>01= check if data code matches its inverse values, ignore error check from custom/address code</p> <p>10= check if custom/address code matches its inverse values, ignore error check from data code</p> <p>11= check if data and custom codes match their inverse values</p> |
| 3-2 | R/W | 0 | <p>Irq_sel. IRQ Selection and width measurement reset:</p> <p>00: IR Decoder done</p> <p>01: IR input rising or falling edge detected</p> <p>10: IR input falling edge detected</p> <p>11: IR rising edge detected</p> |
| 1 | R/W | 0 | IR input polarity selection. Used to adjust/invert the polarity of IR input waveform. |
| 0 | R/W | 0 | Decoder Reset. Set to 1 to reset the IR decoder. This is useful because the IR remote state machine thinks in terms of milliseconds and may take tens of milliseconds to return to idle by itself. |

AO_MF_IR_DEC_REG2 0x18

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-27 | R | 0 | Unused |
| 26 | R/W | 0 | <p>Width_low_enable. Enable counter record of low pulse width duration.</p> <p>0 = do not force enable of width low counter record</p> <p>1 = force enable of width low counter record</p> <p>Some IR formats' decoding need to use internal width low counter record. By default, the width low counter record is enabled automatically for related formats. This bit is used for enable forcibly just in case.</p> <p>Besides, if "leader plus stop bit" method is enabled for repeat detection, This bit is also need to be enabled.</p> |
| 25 | R/W | 0 | <p>Width_high_enable. Enable counter record of high pulse width duration.</p> <p>0 = do not force enable of width high counter record</p> <p>1 = force enable of width high counter record</p> <p>Some IR formats' decoding need to use internal width high counter record. By default, the width high counter record is enabled automatically for related formats. This bit is used for enable forcibly just in case.</p> |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 24 | R/W | 0 | <p>Enable “leader plus stop bit” method for repeat detection.</p> <p>0 = “leader plus stop bit” method disabled 1 = “leader plus stop bit” method enabled</p> <p>Some IR formats use one normal frame's leader followed by a stop bit to rereset repeat. There is no frame data in this kind repeat frame.</p> <p>To use this method, width_low_enable (Bit 26 of 0x20 offset register) shall be set to 1, and max_duration_3 and min_duration_3 in 0x28 offset register shall be set to appropriate value for stop bit's timing duration.</p> |
| 23-22 | R | 0 | Unused |
| 21-16 | R/W | 0 | <p>Repeat_Bit_index.</p> <p>These Bits are used for compare bit method to set the index of the bit that is used as repeat flag. The index value can be 0 to 63.</p> <p>Compare bit method is one of the methods for repeat detection . Some IR formats use one bit in frame to rereset whether the frame is repeat.</p> |
| 15 | R/W | 0 | <p>Running_count_tick_mode.</p> <p>This bit is only valid when use_clock_to_counter Bit is 0.</p> <p>0 = use 100uS as increasing time unit of frame-to-frame counter 1 = use 10uS as increasing time unit of frame-to-frame counter</p> |
| 14 | R/W | 0 | <p>Use_clock_to_counter.</p> <p>If This bit is set to 1, the running_count_tick_mode Bit is ignored.</p> <p>0 = do not use system clock as increasing time unit of frame-to-frame counter 1 = use system clock as increasing time unit of frame-to-frame counter</p> |
| 13 | R/W | 0 | <p>Enable frame-to-frame time counter (running-counter).</p> <p>0 = frame-to-frame time counter disabled 1 = frame-to-frame time counter enabled</p> <p>If enabled, the frame-to-frame counter increases every 100uS or 10uS until it reaches its max value(all Bits are 1) or it is reset. When it reaches its max value, it keeps the value until it is reset. When it is reset, it becomes zero and then begin increasing again. The counter can be reset even when it has not reached its max value. The increasing time unit can be 100uS or 10uS or system clock frequency which is set by running_count_tick_mode and use_clock_to_counter settings.</p> <p>When a frame's data are capured and stored into FrameBody/FrameBody_1 register, frame-to-frame counter is reset to zero. After reset to zero, the frame-to-frame counter will begin increasing again, until it reaches its max value or it is reset.</p> <p>For repeat frame detection, users can use hardware detection by enabling compare frame or compare bit method, or users can read frame-to-frame counter to let software to make the decision.</p> |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 12 | R/W | 0 | <p>Enable repeat time check for repeat detection. This bit is valid only when compare frame method or compare Bit method is enabled.</p> <p>0 = repeat time check disabled 1 = repeat time check enabled</p> <p>When repeat frame detection is enabled by enabling compare frame or compare Bit method, the frame time interval may need to be checked in order to decide whether the frames are repeat (key pressed without release) or not.</p> <p>You can configure the repeat_time_max value by setting 0x38 offset register.</p> <p>If frame interval is smaller than the “repeat time max”, it may considered as repeat.</p> <p>If frame interval is bigger than the “repeat time max”, it is considered as not repeat.</p> |
| 11 | R/W | 0 | <p>Enable compare frame method for repeat detection.</p> <p>0 = compare frame method disabled 1 = compare frame method enabled</p> <p>Some IR formats transfer the same data frame as repeat frame when the key is kept pressed without release. For repeat detection, compare frame method can be used.</p> <p>If a new frame and the old received frame are the same and the repeat time is under the limit (frame-to-frame time counter value is smaller than the repeat_time_max), the status register's frame_status0 is set to 1 automatically as repeat detected flag.</p> <p>You can configure the repeat_time_max value by setting 0x38 offset register.</p> |
| 10 | R/W | 0 | <p>Enable compare Bit method for repeat detection.</p> <p>0 = compare Bit method disabled 1 = compare Bit method enabled</p> <p>Some IR formats use only one bit to represent whether the frame is repeat. You can compare only one bit instead of compare the whole frame for repeat detection. If compare frame method is enabled, then This bit is ignored.</p> |
| 9 | R/W | 0 | <p>Disable read-clear of FrameBody/FrameBody_1.</p> <p>0 = read-clear enabled 1 = read-clear disabled</p> <p>FrameBody/FrameBody_1 registers are read-cleared in default. When these register are read, they are cleared to zero. This bit is used to disable this read-clear feature.</p> <p>(FrameBody/FrameBody_1 registers are used to store captured frame data).</p> |
| 8 | R/W | 0 | <p>input stream bit order.</p> <p>0 = LSB first mode (first bit in input stream is considered as LSB) 1 = MSB first mode (first bit in input stream is considered as MSB)</p> <p>Note: Commonly the following formats shall set 1 to enable MSB first mode (unless you insist on LSBfirst mode for your specified use): RC5, RC5 extend, RC6, RCMM, Duokan, Comcast</p> |
| 7:4 | R | 0 | Unused |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 3:0 | R/W | 0 | Decode_mode.(format selection) 0x0 =NEC 0x1= skip leader (just Bits, without leader) 0x2=General time measurement (measure width, software decode) 0x3=MITSUBISHI 0x4=Thomson 0x5=Toshiba 0x6=Sony SIRC 0x7=RC5 0x8=Reserved 0x9=RC6 0xA=RCMM 0xB=Duokan 0xC=Reserved 0xD=Reserved 0xE=Comcast 0xF=Sanyo |

AO_MF_IR_DEC_DURATN2 0x19

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-26 | R | 0 | Unused |
| 25-16 | R/W | 0 | Max duration of Duration Setting Register 2. It defines max duration for: Half bit for RC5/6 format (RC5 typically 888.89us for half bit, RC6 typically 444.44us) or time of Duokan/RCMM/4ppm format's Logic "10" or time of Comcast/16ppm's base duration |
| 15-10 | R | 0 | Unused |
| 9-0 | R/W | 0 | Min duration of Duration Setting Register 2. |

AO_MF_IR_DEC_DURATN3 0x1a

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31-26 | R | 0 | Unused |

| | | | |
|-------|-----|---|--|
| 25-16 | R/W | 0 | Max duration of Duration Setting Register 3. It defines max duration for: Whole bit for RC5/6 format (RC5 typically 1777.78us for whole bit, RC6 typically 888.89us) or time of Duokan/RCMM/4ppm format's Logic "11" or time of Comcast/16ppm's offset duration |
| 15-10 | R | 0 | Unused |
| 9-0 | R/W | 0 | Min duration of Duration Setting Register 3. |

AO_MF_IR_DEC_FRAME: Frame Body (Frame Data, LSB 32Bit) 0x1b

Note: New keys will be ignored until **FrameBody** register is read if the *hold first key* Bit is set in the decode control register. Reading this register resets an internal frame data valid flag.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-0 | R | 0 | 32 bit Read-Only register stores frame body (LSB 32 bit) captured from IR remote data flow, commonly includes custom/address code and data code. |

AO_MF_IR_DEC_FRAME: Frame Body 1 (Frame Data, MSB 32Bit) 0x1b

Note: New keys will be ignored until **FrameBody** register is read if the *hold first key* Bit is set in the decode control register. Reading this register resets an internal frame data valid flag.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-0 | R | 0 | Stores frame body excess 32 bit range. (MSB 32 bit) |

AO_MF_IR_DEC_STATUS_1 0x1c

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-20 | R | 0 | Unused |
| 19-0 | R | 0 | Stores the last frame-to-frame counter value before the last counter reset caused by the last frame data record/update. |

AO_MF_IR_DEC_STATUS_2 0x1d

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-20 | R | 0 | Unused |
| 19-0 | R | 0 | Stores the value of the frame-to-frame counter which is running currently. |

14.7 Pulse-Width Modulation

14.7.1 Overview

The chip has 5 PWM modules that can be connected to various digital I/O pins, among which 3 are in EE domain and 2 is in AO domain. Each PWM is driven by a programmable divider driven by a 4:1 clock selector. The PWM signal is generated using two 16-bit counters. One is the High and Low counter, which is individually programmable with values between 1 and 65535. Using a combination of the divided clock (divide by N) and the HIGH and LOW counters, a wide number of PWM configurations are possible. The other is delta-sigma counter, generate 18-bit sigma, the PWM-out is the highest sigma. The PWM outputs vs counters are also illustrate below.

Figure 14-6 PWM Block Diagram

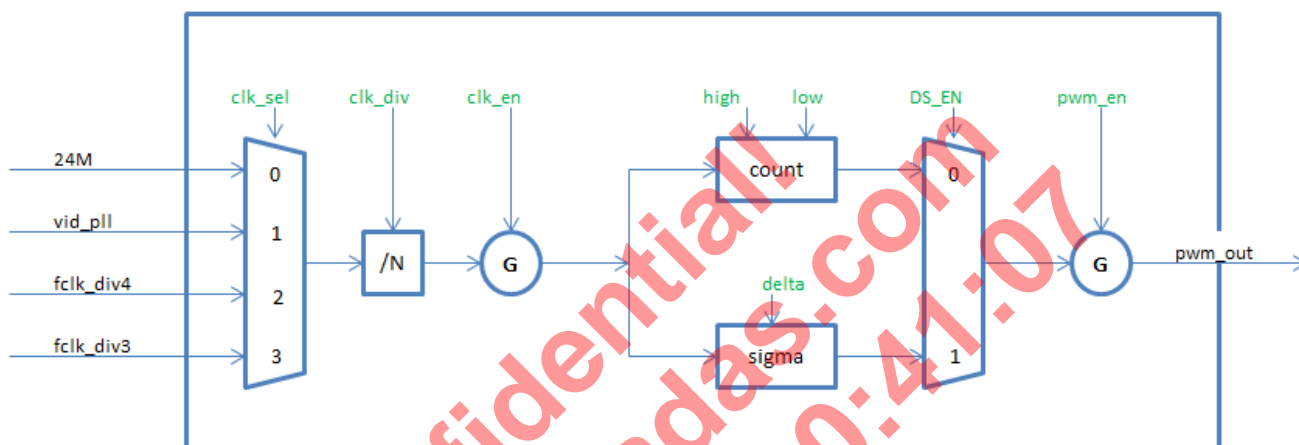

Figure 14-7 High/Low counter

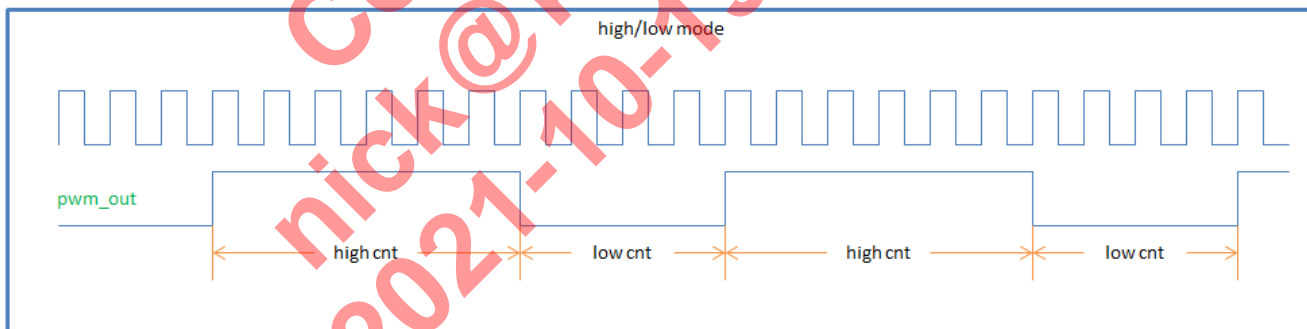

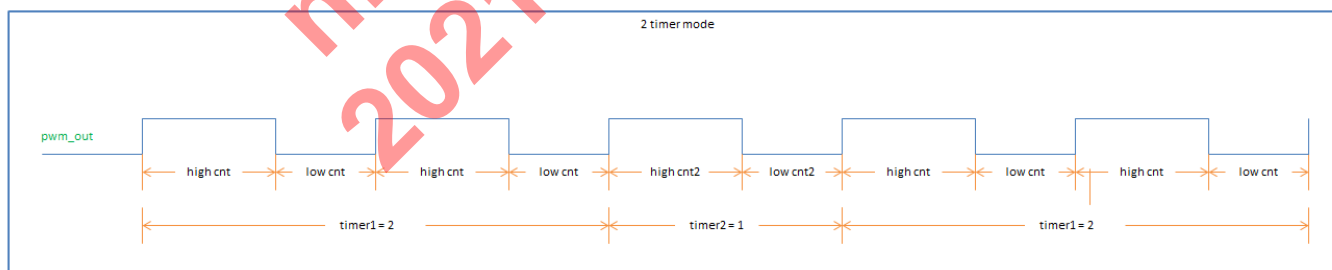

Figure 14-8 Delta-sigma conter, delta = 9362 & delta = 56000

PWM 2 timer mode is illustrated as following:

Figure 14-9 2 timer mode

14.7.2 RegisterDescription

Each PWM module contains two PWM generators call A and B and controlled by the following registers. For PWM modules in EE domain, the each register's final address = 0xffd00000 + offset*4

PWM_PWM_A 0x6c00

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
|--------|-----|---------|-------------|

| | | | |
|-------|-----|---|--|
| 31-15 | R/W | 0 | PWM_A_HIGH: This sets the high time (in clock counts) for the PWM_A generator output |
| 15-0 | R/W | 0 | PWM_A_LOW: This sets the high time (in clock counts) for the PWM_A generator output |

PWM_PWM_B 0x6c01

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-15 | R/W | 0 | PWM_B_HIGH: This sets the high time (in clock counts) for the PWM_B generator output |
| 15-0 | R/W | 0 | PWM_B_LOW: This sets the high time (in clock counts) for the PWM_B generator output |

PWM_MISC_REG_AB 0x6c02

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31 | R/W | 0 | pwm_B_hiz when hiz mode, pwm_o will connect to pad_oe, then pad_o will equal this bit |
| 30 | R/W | 0 | pwm_A_hiz when hiz mode, pwm_o will connect to pad_oe, then pad_o will equal this bit |
| 29 | R/W | 0 | pwm_B_constant_en |
| 28 | R/W | 0 | pwm_A_constant_en |
| 27 | R/W | 0 | pwm_B_inv_en |
| 26 | R/W | 0 | pwm_A_inv_en |
| 25 | R/W | 0 | cntl_pwm_a2_en |
| 24 | R/W | 0 | cntl_pwm_b2_en |
| 23 | R/W | 0 | PWM_B_CLK_EN: Set this bit to 1 to enable PWM B clock |
| 22-16 | R/W | 0 | PWM_B_CLK_DIV: Selects the divider (N+1) for the PWM B clock. See the clock tress document |
| 15 | R/W | 0 | PWM_A_CLK_EN: Set this bit to 1 to enable PWM A clock |
| 14-8 | R/W | 0 | PWM_A_CLK_DIV: Selects the divider (N+1) for the PWM A clock. See the clock tress document |
| 7-6 | R/W | 0 | PWM_B_CLK_SEL: Select the clock for the PWM B. See the clock tress document |
| 5-4 | R/W | 0 | PWM_A_CLK_SEL: Select the clock for the PWM A. See the clock tress document |
| 3 | R/W | 0 | DS_B_EN: This bit is only valid if PWM_B_EN is 0: if this bit is set to 1, then the PWM_B output is configured to generate a delta sigma output based on the settings in the register below. If this bit is set to 0, then the PWM_B output is set low. |
| 2 | R/W | 0 | DS_A_EN: This bit is only valid if PWM_A_EN is 0: if this bit is set to 1, then the PWM_A output is configured to generate a delta sigma output based on the settings in the register below. If this bit is set to 0, then the PWM_A output is set low. |
| 1 | R/W | 0 | PWM_B_EN: If this bit is set to 1, then the PWM_B output is configured to generate a PWM output based on the register above. If this bit is 0, then the PWM_B output is controlled by DS_B_EN above. |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 0 | R/W | 0 | PWM_A_EN: If this bit is set to 1, then the PWM_A output is configured to generate a PWM output based on the register above. If this bit is 0, then the PWM_A output is controlled by DS_A_EN above. |

DS_A_B 0x6c03

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-15 | R/W | 0 | DS_B_VAL: This value represents the delta sigma setting for channel B (PWM_B) |
| 15-0 | R/W | 0 | DS_A_VAL: This value represents the delta sigma setting for channel A (PWM_A) |

PWM_TIME_AB 0x6c04

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31-24 | R/W | 0 | A_timer1 |
| 23:16 | R/W | 0 | A_timer2 |
| 15:8 | R/W | 0 | B_timer1 |
| 7:0 | R/W | 0 | B_timer2 |

PWM_A2 0x6c05

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-15 | R/W | 0 | PWM_A2_HIGH: This sets the high time (in clock counts) for the PWM_A2 generator output |
| 15-0 | R/W | 0 | PWM_A2_LOW: This sets the high time (in clock counts) for the PWM_A2 generator output |

PWM_B2 0x6c06

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-15 | R/W | 0 | PWM_B2_HIGH: This sets the high time (in clock counts) for the PWM_B2 generator output |
| 15-0 | R/W | 0 | PWM_B2_LOW: This sets the high time (in clock counts) for the PWM_B2 generator output |

PWM_BLINK_AB 0x6c07

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------|
| 31-10 | R | 0 | Reserved |
| 9 | R/W | 0 | blink enable for pwm B |
| 8 | R/W | 0 | blink enable for pwm A |
| 7-4 | R/W | 0 | blink times for pwm B |
| 3-0 | R/W | 0 | blink times for pwm A |

PWM_PWM_C_D: 0x6800~0x6807

See the registers for PWM A/B

PWM_PWM_E_F: 0x6400~0x6407

See the registers for PWM A/B

AO PWM' clock sources are xtal, clk81, fclk_div3, fclk_div4.

For the following register, each register's final address = 0xFF807000 + offset*4

AO_PWM_PWM_A: PWM_A_DUTY_CYCLE 0x0

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-15 | R/W | 0 | PWM_A_HIGH: This sets the high time (in clock counts) for the PWM_A generator output |
| 15-0 | R/W | 0 | PWM_A_LOW: This sets the high time (in clock counts) for the PWM_A generator output |

AO_PWM_PWM_B: PWM_B_DUTY_CYCLE 0x1

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-15 | R/W | 0 | PWM_B_HIGH: This sets the high time (in clock counts) for the PWM_B generator output |
| 15-0 | R/W | 0 | PWM_B_LOW: This sets the high time (in clock counts) for the PWM_B generator output |

AO_PWM_MISC_REG_AB: 0x2

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | pwm_b_hiz when hiz mode, pwm_o will connect to pad_oe, then pad_o will equal this bit |
| 30 | R/W | 0 | pwm_a_hiz when hiz mode, pwm_o will connect to pad_oe, then pad_o will equal this bit |
| 29 | R/W | 0 | pwm_b_constant_en set this bit to 1, then pwm can support 0%(100%) duty output |
| 28 | R/W | 0 | pwm_a_constant_en set this bit to 1, then pwm can support 0%(100%) duty output |
| 27 | R/W | 0 | pwm_b_inv_en set this bit to 1, pwm output is inverted |
| 26 | R/W | 0 | pwm_a_inv_en set this bit to 1, pwm output is inverted |
| 25 | R/W | 0 | Pwm_a2_en |
| 24 | R/W | 0 | Pwm_b2_en |
| 23 | R/W | 0 | PWM_B_CLK_EN: Set this bit to 1 to enable PWM B clock |
| 22-16 | R/W | 0 | PWM_B_CLK_DIV: Selects the divider (N+1) for the PWM B clock. See the clock tress document |
| 15 | R/W | 0 | PWM_A_CLK_EN: Set this bit to 1 to enable PWM A clock |
| 14-8 | R/W | 0 | PWM_A_CLK_DIV: Selects the divider (N+1) for the PWM A clock. See the clock tress document |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 7-6 | R/W | 0 | PWM_B_CLK_SEL: Select the clock for the PWM B. See the clock tress document |
| 5-4 | R/W | 0 | PWM_A_CLK_SEL: Select the clock for the PWM A. See the clock tress document |
| 3 | R/W | 0 | DS_B_EN: This bit is only valid if PWM_B_EN is 0: if this bit is set to 1, then the PWM_B output is configured to generate a delta sigma output based on the settings in the register below. If this bit is set to 0, then the PWM_B output is set low. |
| 2 | R/W | 0 | DS_A_EN: This bit is only valid if PWM_A_EN is 0: if this bit is set to 1, then the PWM_A output is configured to generate a delta sigma output based on the settings in the register below. If this bit is set to 0, then the PWM_A output is set low. |
| 1 | R/W | 0 | PWM_B_EN: If this bit is set to 1, then the PWM_B output is configured to generate a PWM output based on the register above. If this bit is 0, then the PWM_B output is controlled by DS_B_EN above. |
| 0 | R/W | 0 | PWM_A_EN: If this bit is set to 1, then the PWM_A output is configured to generate a PWM output based on the register above. If this bit is 0, then the PWM_A output is controlled by DS_A_EN above. |

AO_PWM_DELTA_SIGMA_AB 0x3

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-15 | R/W | 0 | DS_B_VAL: This value represents the delta sigma setting for channel B (PWM_B) |
| 15-0 | R/W | 0 | DS_A_VAL: This value represents the delta sigma setting for channel A (PWM_A) |

AO_PWM_TIME_AB 0x4

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31-24 | R/W | 0 | A1_timer |
| 23:16 | R/W | 0 | A2_timer |
| 15:8 | R/W | 0 | B1_timer |
| 7:0 | R/W | 0 | B2_timer |

AO_PWM_A2 0x5

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-15 | R/W | 0 | PWM_A2_HIGH: This sets the high time (in clock counts) for the PWM_A2 generator output |
| 15-0 | R/W | 0 | PWM_A2_LOW: This sets the high time (in clock counts) for the PWM_A2 generator output |

AO_PWM_B2 0x6

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-15 | R/W | 0 | PWM_B2_HIGH: This sets the high time (in clock counts) for the PWM_B2 generator output |
| 15-0 | R/W | 0 | PWM_B2_LOW: This sets the high time (in clock counts) for the PWM_B2 generator output |

AO_PWM_BLINK_AB 0x7

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------|
| 31-10 | R | 0 | Reserved |
| 9 | R/W | 0 | blink enable for pwm B |
| 8 | R/W | 0 | blink enable for pwm A |
| 7-4 | R/W | 0 | blink times for pwm B |
| 3-0 | R/W | 0 | blink times for pwm A |

For the following register, each register's final address= 0xFF802000 + offset * 4

AO_PWM_PWM_C: PWM_C_DUTY_CYCLE 0x0

This is a new module to Nike. It replaces the older delta sigma (PWM like) generator in the HIU. This module allows the software to select either a PWM or delta-sigma output using the same module. There are two outputs: PWM_C and PWM_D. Either of these can be programmed to be PWM outputs or delta sigma outputs.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-15 | R/W | 0 | PWM_C_HIGH: This sets the high time (in clock counts) for the PWM_C generator output |
| 15-0 | R/W | 0 | PWM_C_LOW: This sets the high time (in clock counts) for the PWM_C generator output |

AO_PWM_PWM_D: PWM_D_DUTY_CYCLE 0x1

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-15 | R/W | 0 | PWM_D_HIGH: This sets the high time (in clock counts) for the PWM_D generator output |
| 15-0 | R/W | 0 | PWM_D_LOW: This sets the high time (in clock counts) for the PWM_D generator output |

AO_PWM_MISC_REG_CD: 0x2

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | pwm_D_hiz when hiz mode, pwm_o will connect to pad_oe, then pad_o will equal this bit |
| 30 | R/W | 0 | pwm_C_hiz when hiz mode, pwm_o will connect to pad_oe, then pad_o will equal this bit |
| 29 | R/W | 0 | pwm_D_constant_en set this bit to 1, then pwm can support 0%(100%) duty output |
| 28 | R/W | 0 | pwm_C_constant_en set this bit to 1, then pwm can support 0%(100%) duty output |
| 27 | R/W | 0 | pwm_D_inv_en set this bit to 1, pwm output is inverted |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 26 | R/W | 0 | pwm_C_inv_en set this bit to 1, pwm output is inverted |
| 25 | R/W | 0 | Pwm_C2_en |
| 24 | R/W | 0 | Pwm_D2_en |
| 23 | R/W | 0 | PWM_D_CLK_EN: Set this bit to 1 to enable PWM Dclock |
| 22-16 | R/W | 0 | PWM_D_CLK_DIV: Selects the divider (N+1) for the PWM Dclock. See the clock tress document |
| 15 | R/W | 0 | PWM_C_CLK_EN: Set this bit to 1 to enable PWM C clock |
| 14-8 | R/W | 0 | PWM_C_CLK_DIV: Selects the divider (N+1) for the PWM C clock. See the clock tress document |
| 7-6 | R/W | 0 | PWM_D_CLK_SEL: Select the clock for the PWM D. See the clock tress document |
| 5-4 | R/W | 0 | PWM_C_CLK_SEL: Select the clock for the PWM C. See the clock tress document |
| 3 | R/W | 0 | DS_D_EN: This bit is only valid if PWM_D_EN is 0: if this bit is set to 1, then the PWM_D output is configured to generate a delta sigma output based on the settings in the register below. If this bit is set to 0, then the PWM_D output is set low. |
| 2 | R/W | 0 | DS_C_EN: This bit is only valid if PWM_C_EN is 0: if this bit is set to 1, then the PWM_C output is configured to generate a delta sigma output based on the settings in the register below. If this bit is set to 0, then the PWM_C output is set low. |
| 1 | R/W | 0 | PWM_D_EN: If this bit is set to 1, then the PWM_D output is configured to generate a PWM output based on the register above. If this bit is 0, then the PWM_D output is controlled by DS_D_EN above. |
| 0 | R/W | 0 | PWM_C_EN: If this bit is set to 1, then the PWM_C output is configured to generate a PWM output based on the register above. If this bit is 0, then the PWM_C output is controlled by DS_C_EN above. |

AO_PWM_DELTA_SIGMA_CD 0x3

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-15 | R/W | 0 | DS_D_VAL: This value represents the delta sigma setting for channel D (PWM_D) |
| 15-0 | R/W | 0 | DS_C_VAL: This value represents the delta sigma setting for channel C (PWM_C) |

AO_PWM_TIME_CD 0x4

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|-------------|
| 31-24 | R/W | 0 | C1_timer |
| 23:16 | R/W | 0 | C2_timer |
| 15:8 | R/W | 0 | D1_timer |
| 7:0 | R/W | 0 | D2_timer |

AO_PWM_C2 0x5

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-15 | R/W | 0 | PWM_C2_HIGH: This sets the high time (in clock counts) for the PWM_C generator output |
| 15-0 | R/W | 0 | PWM_C2_LOW: This sets the high time (in clock counts) for the PWM_C generator output |

AO_PWM_D2 0x6

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-15 | R/W | 0 | PWM_D2_HIGH: This sets the high time (in clock counts) for the PWM_D generator output |
| 15-0 | R/W | 0 | PWM_D2_LOW: This sets the high time (in clock counts) for the PWM_D generator output |

AO_PWM_BLINK_CD 0x7

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|------------------------|
| 31-10 | R | 0 | Reserved |
| 9 | R/W | 0 | blink enable for pwm D |
| 8 | R/W | 0 | blink enable for pwm C |
| 7-4 | R/W | 0 | blink times for pwm D |
| 3-0 | R/W | 0 | blink times for pwm C |

14.8 SAR ADC

14.8.1 Overview

This SAR ADC is a general purpose ADC for measuring analog signals. The module can make RAW ADC measurements or average a number of measurements to introduce filtering. The SAR ADC is a single block so an analog mux is placed in front to allow multiple different measurements to be made sequentially. Timing of the samples, and delays between muxing are all programmable as is the averaging to be applied to the SAR ADC.

14.8.2 RegisterDescription

Each register final address = 0xff809000 + offset * 4

SAR_ADC_REG0: Control Register #0 0x80

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R | 0 | PANEL DETECT level. |
| 30 | R/W | 0 | DELTA_BUSY: If This bit is 1, then it indicates the delta processing engine is busy |
| 29 | R/W | 0 | AVG_BUSY: If This bit is 1, then it indicates the averaging engine is busy |
| 28 | R/W | 0 | SAMPLE_BUSY: If This bit is 1, then it indicates the sampling engine is busy |
| 27 | R/W | 0 | FIFO_FULL: |
| 26 | R/W | 0 | FIFO_EMPTY: |
| 25-21 | R/W | 4 | FIFO_COUNT: Current count of samples in the acquisition FIFO |
| 20-19 | R/W | 0 | ADC_BIAS_CTRL |
| 18-16 | R/W | 0 | CURR_CHAN_ID: These Bits represent the current channel (0..7) that is being sampled. |
| 15 | R/W | 0 | ADC_TEMP_SEN_SEL |
| 14 | R/W | 0 | SAMPLING_STOP: This bit can be used to cleanly stop the sampling process in the event that continuous sampling is enabled. To stop sampling, simply set This bit and wait for all processing modules to no longer indicate that they are busy. |
| 13-12 | R/W | 0 | CHAN_DELTA_EN: There are two Bits corresponding to Channels 0 and 1. Channel 0 and channel 1 can be individually enabled to take advantage of the delta processing module. |
| 11 | R/W | 0 | Unused |
| 10 | R/W | 0 | DETECT_IRQ_POL: This bit sets the polarity of the detect signal. The detect signal is used during X/Y panel applications to detect if the panel is touched |
| 9 | R/W | 0 | DETECT_IRQ_EN: If This bit is set to 1, then an interrupt will be generated if the DETECT signal is low/high. The polarity is set in the bit above. |
| 8-4 | R/W | 0 | FIFO_CNT_IRQ: When the FIFO contains N samples, then generate an interrupt (if bit 3 is set below). |
| 3 | R/W | 0 | FIFO_IRQ_EN: Set This bit to 1 to enable an IRQ when the acquisition FIFO reaches a certain level. |
| 2 | W | 0 | SAMPLE_START: This bit should be written to 1 to start sampling. |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 1 | R/W | 0 | CONTINUOUS_EN: If This bit is set to 1, then the channel list will be continually processed |
| 0 | R/W | 0 | SAMPLING_ENABLE: Setting This bit to '1' enables the touch panel controller sampling engine, averaging module, XY processing engine and the FIFO. |

SAR_ADC_CHAN_LIST:Channel List 0x81

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-27 | R/W | 0 | unused |
| 26-24 | R/W | 2 | Length of the list of channels to process. If this value is 2, then only channels in Bits [8:0] below are processed. |
| 23-21 | R/W | 7 | 8th channel |
| 20-18 | R/W | 6 | 7th channel |
| 17-15 | R/W | 5 | 6th channel |
| 14-12 | R/W | 4 | 5th channel |
| 11-9 | R/W | 3 | 4th channel |
| 8-6 | R/W | 2 | 3rd channel |
| 5-3 | R/W | 1 | 2nd channel |
| 2-0 | R/W | 0 | First channel in the list of channels to process |

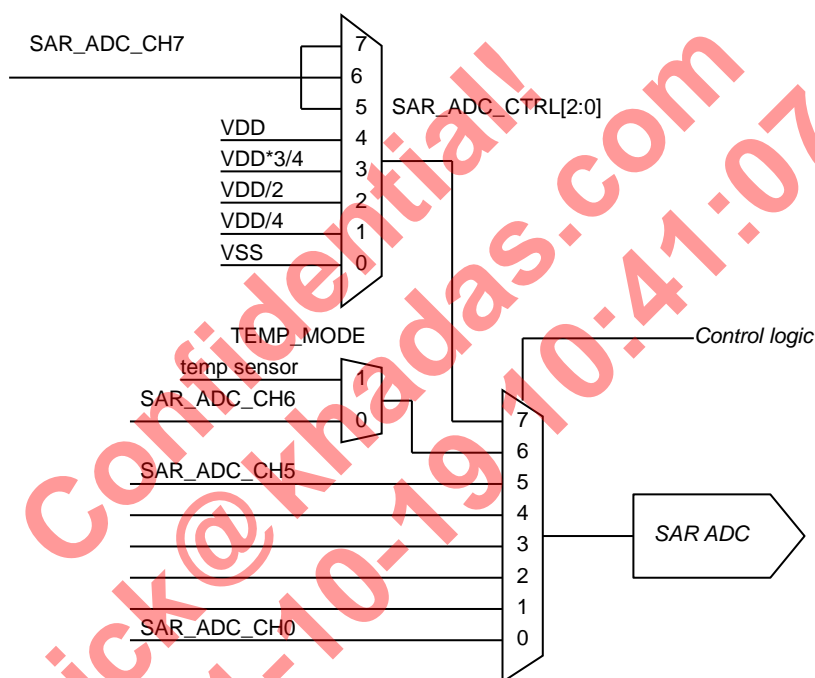

SAR_ADC_AVG_CNTL:Sampling/Averaging Modes 0x82

Each channel listed in the CHANNEL_LIST is given independent control of the number of samples to acquire and averaging mode

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-30 | R/W | 0 | Channel 7: Averaging mode: 0 = no averaging, 1 = simple averaging, 2 = median averaging. |
| 29-28 | R/W | 0 | Channel 6: Averaging mode: 0 = no averaging, 1 = simple averaging, 2 = median averaging. |
| 27-26 | R/W | 0 | Channel 5: Averaging mode: 0 = no averaging, 1 = simple averaging, 2 = median averaging. |
| 25-24 | R/W | 0 | Channel 4: Averaging mode: 0 = no averaging, 1 = simple averaging, 2 = median averaging. |
| 23-22 | R/W | 0 | Channel 3: Averaging mode: 0 = no averaging, 1 = simple averaging, 2 = median averaging. |
| 21-20 | R/W | 0 | Channel 2: Averaging mode: 0 = no averaging, 1 = simple averaging, 2 = median averaging. |
| 19-18 | R/W | 0 | Channel 1: Averaging mode: 0 = no averaging, 1 = simple averaging, 2 = median averaging. |
| 17-16 | R/W | 0 | Channel 0: Averaging mode: 0 = no averaging. 1 = simple averaging of the number of samples acquired (1,2,4 or 8). 2 = median averaging. NOTE: If these Bits are set to 2, then you must set the number of samples to acquire below to 8. |
| 15-13 | R/W | 0 | Channel 7: Number of samples to acquire 2N: |
| 13-12 | R/W | 0 | Channel 6: Number of samples to acquire 2N: |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 11-10 | R/W | 0 | Channel 5: Number of samples to acquire 2N: |
| 9-8 | R/W | 0 | Channel 4: Number of samples to acquire 2N: |
| 7-6 | R/W | 0 | Channel 3: Number of samples to acquire 2N: |
| 5-4 | R/W | 0 | Channel 2: Number of samples to acquire 2N: |
| 3-2 | R/W | 0 | Channel 1: Number of samples to acquire 2N: |
| 1-0 | R/W | 0 | Channel 0: Number of samples to acquire 2N: 0 = 1, 1 = 2, 2 = 4, 4 = 8. |

SAR_ADC_REG3: Control Register #3 0x83

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31 | R/W | 0 | CNTL_USE_SC_DLY: hold time delay was added to the start conversion clock. Unfortunately, it appears that the analog ADC design requires that we use the inverted clock so This bit is meaningless. |
| 30 | R/W | 0 | SAR_ADC_CLK_EN: 1 = enable the SAR ADC clock |
| 29 | R/W | 0 | reserved |
| 28 | R/W | 0 | reserved |
| 27 | R/W | 0 | SARADC_CTRL[4]: is used to control the internal ring counter. 1 = enable the continuous ring counter. 0 = disable |
| 26 | R/W | 0 | SARADC_CTRL[3]: used to select the internal sampling clock phase |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 25~23 | R/W | 0 | SARADC_CTRL[2:0]: 000 ssa 001 vdda/4 010 vdda/2 011 vdda*3/4 100 vdda 101, 110, 111 unused |
| 22 | R/W | 0 | DETECT_EN: This bit controls the analog switch that connects a 50k resistor to the X+ signal. Setting This bit to 1 closes the analog switch |
| 21 | R/W | 0 | ADC_EN: Set This bit to 1 to enable the ADC |
| 20-18 | R/W | 2 | PANEL_DETECT_COUNT: Increasing this value increases the filtering on the panel detect signal using the timebase settings in Bits [17:16] below. |
| 17-16 | R/W | 0 | PANEL_DETECT_FILTER_TB: 0 = count 1uS ticks, 1 = count 10uS ticks, 2 = count 100uS ticks. 3 = count 1mS ticks |
| 15-10 | R/W | 20 | ADC_CLK_DIV: The ADC clock is derived by dividing the 27Mhz crystal by N+1. This value divides the 27Mhz clock to generate an ADC clock. A value of 20 for example divides the 27Mhz clock by 21 to generate an equivalent 1.28Mhz clock. |
| 9-8 | R/W | 1 | BLOCK_DLY_SEL: 0 = count 1uS ticks, 1 = count 10uS ticks, 2 = count 100uS ticks. 3 = count 1mS ticks |
| 7-0 | R/W | 10 | BLOCK_DLY: After all channels in the CHANNEL_LIST have been processed, the sampling engine will delay for an amount of time before re-processing the CHANNEL_LIST again. Combined with Bits [9:8] above, this value is used to generate a delay between processing blocks of channels. |

SAR_ADC_DELAY:INPUT / SAMPLING DELAY 0x84

As the CHANNEL_LIST is process, the input switches are set according to the requirements of the channel. After setting the switches there is a programmable delay before sampling begins. Additionally, each channel specifies the number of samples for that particular channel. The sampling rate is programmed below.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-29 | R | 0 | unused |
| 28 | R/W | 0 | CNTL_EOC_BY_CNT: ADC dout valid controlled by counter |
| 27 | R/W | 0 | CNTL_USE_LATCHED_DATA: ADC dout be latched first, then be sampled |
| 26 | R | 0 | unused |
| 25-24 | R/W | 0 | INPUT_DLY_SEL: 0 = 111nS ticks, 1 = count 1uS ticks, 2 = count 10uS ticks, 3 = count 100uS ticks |
| 23-16 | R/W | 3 | INPUT_DLY_CNY: For channels that acquire 2,4 or 8 samples, the delay between two samples is controlled by this count (N+1) combined with the delay selection in the two bits above. |
| 15-10 | R/W | 14 | CNTL_EOC_DLY_CNT: the delay between SC and ADC output data ready for latch/sample |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 9-8 | R/W | 0 | SAMPLE_DLY_SEL: 0 = count 1uS ticks, 1 = count 10uS ticks, 2 = count 100uS ticks. 3 = count 1mS ticks |
| 7-0 | R/W | 9 | SAMPLE_DLY_CNY: For channels that acquire 2,4 or 8 samples, the delay between two samples is controlled by this count (N+1) combined with the delay selection in the two bits above. |

SAR_ADC_LAST_RD: Last Sample 0x85

For channel 0 and channel 1, (the special X/Y channels) the last sample pushed into the FIFO for each channel is saved in a register. This allows the software to see the last sample for channel 0 and channel 1 even when the FIFO overflows. For example, if we are sampling quickly and there is a gesture on the screen, we can use the contents of the FIFO to see the direction of the gesture and use the last sample values to see where the pen finally came to rest.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---------------|
| 31-24 | R | 0 | unused |
| 23-16 | R | 0 | LAST_CHANNEL1 |
| 15-10 | R | 0 | unused |
| 9-0 | R | 0 | LAST_CHANNELO |

SAR_ADC_FIFO_RD: Control Register #6 (FIFO RD) 0x86

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-16 | R | 0 | Unused |
| 15 | R | 0 | Unused |
| 14-12 | R | 0 | Channel ID. This value identifies the channel associated with the data in Bits [9:0] below |
| 11-10 | R | 0 | Unused |
| 9-0 | R | 0 | Sample value: 9-bit raw or averaged ADC sample written to the FIFO. |

SAR_ADC_AUX_SW: Channel 2~7 ADC MUX, Switch Controls 0x87

Channels 2 ~ 7 can program the ADC input mux to any selection between 0 and 7. This register allows the software to associate a mux selection with a particular channel. In addition to the ADC mux, there are a number of switches that can be set in any particular state. Channels 2 ~ 7 share a common switch setting. Channels 0 and 1 on the other hand have programmable switch settings (see other registers below).

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-26 | R | 0 | unused |
| 25-23 | R/W | 7 | Channel 7 ADC_MUX setting when channel 7 is being measured. |
| 22-20 | R/W | 7 | Channel 6 ADC_MUX setting when channel 6 is being measured. |
| 19-17 | R/W | 7 | Channel 5 ADC_MUX setting when channel 5 is being measured. |
| 16-14 | R/W | 6 | Channel 4 ADC_MUX setting when channel 4 is being measured. |

| | | | |
|-------|-----|---|---|
| 13-11 | R/W | 0 | Channel 3 ADC_MUX setting when channel 3 is being measured. |
| 10-8 | R/W | 1 | Channel 2 ADC_MUX setting when channel 2 is being measured. |
| 7 | R | 0 | unused |
| 6 | R/W | 0 | VREF_P_MUX setting when channel 2,3..7 is being measured |
| 5 | R/W | 0 | VREF_N_MUX setting when channel 2,3..7 is being measured |
| 4 | R/W | 0 | MODE_SEL setting when channel 2,3..7 is being measured |
| 3 | R/W | 1 | YP_DRIVE_SW setting when channel 2,3..7 is being measured |
| 2 | R/W | 1 | XP_DRIVE_SW setting when channel 2,3..7 is being measured |
| 1 | R/W | 0 | YM_DRIVE_SW setting when channel 2,3..7 is being measured |
| 0 | R/W | 0 | YM_DRIVE_SW setting when channel 2,3..7 is being measured |

SAR_ADC_CHAN_10_SW: Channel 0, 1 ADC MUX, Switch Controls 0x88

Channels 0 and 1 have independent programmable switch settings when either/both of these channels are being measured.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 31-26 | R | 0 | unused |
| 25-23 | R/W | 2 | Channel 1 ADC MUX setting |
| 22 | R/W | 0 | Channel 1 VREF_P_MUX |
| 21 | R/W | 0 | Channel 1 VREF_N_MUX |
| 20 | R/W | 0 | Channel 1 MODE_SEL |
| 19 | R/W | 1 | Channel 1 YP_DRIVE_SW setting: 0: TADC_CH6N = 3.3v 1: TADC_CH6N = floating |
| 18 | R/W | 1 | Channel 1 XP_DRIVE_SW setting: 0: TADC_CH6N = 3.3v 1: TADC_CH6N = floating |
| 17 | R/W | 0 | Channel 1 YM_DRIVE_SW setting: 0: TADC_CH4N = floating 1: TADC_CH4N = GND |
| 16 | R/W | 0 | Channel 1 YM_DRIVE_SW setting: 0: TADC_CH4N = floating 1: TADC_CH4N = GND |
| 15-10 | R | | unused |
| 9-7 | R/W | 3 | Channel 0 ADC MUX setting |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 6 | R/W | 0 | Channel 0 VREF_P_MUX |
| 5 | R/W | 0 | Channel 0 VREF_N_MUX |
| 4 | R/W | 0 | Channel 0 MODE_SEL |
| 3 | R/W | 1 | Channel 0 YP_DRIVE_SW setting: 0: TADC_CH6N = 3.3v 1: TADC_CH6N = floating |
| 2 | R/W | 1 | Channel 0 XP_DRIVE_SW setting: 0: TADC_CH6N = 3.3v 1: TADC_CH6N = floating |
| 1 | R/W | 0 | Channel 0 YM_DRIVE_SW setting: 0: TADC_CH4N = floating 1: TADC_CH4N = GND |
| 0 | R/W | 0 | Channel 0 YM_DRIVE_SW setting: 0: TADC_CH4N = floating 1: TADC_CH4N = GND |

SAR_ADC_DETECT_IDLE_SW:DETECT / IDLE Mode switches 0x89

IDLE MODE:

When nothing is being measured, the switches should be put into a safe state. This safe state is accomplished using Bits [9:0] below.

DETECT MODE:

When bit [26] is set, the input muxes / switches are configured according to the Bits below. Typically the software configures the switches below to correspond to the detect touch mode. That is, Y- internal MOSFET is closed so that the Y plane of the touch screen is connected to Ground. Additionally, the DETECT_EN bit(different register) set to 1 so that the 50k resistor to VDD is connected to X+. In this configuration, the detect comparator connected to the 50k resistor will be weakly pulled up to VDD through the 50k resistor. If the user touches the screen, the X and Y planes of the touch screen will contact causing the X+ signal to be pulled to ground.

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|---|
| 31-27 | R | 0 | unused |
| 26 | R/W | 0 | DETECT_SW_EN: If This bit is set, then Bits [25:16] below are applied to the analog muxes/switches of the touch panel controller. |
| 25-23 | R/W | 5 | DETECT MODE ADC MUX setting |
| 22 | R/W | 0 | DETECT MODE VREF_P_MUX setting |
| 21 | R/W | 0 | DETECT MODE VREF_N_MUX setting |
| 20 | R/W | 0 | DETECT MODE MODE_SEL setting |

| Bit(s) | R/W | Default | Description |
|--------|-----|---------|--|
| 19 | R/W | 1 | DETECT MODE YP_DRIVE_SW setting: 0: TADC_CH6N = 3.3v 1: TADC_CH6N = floating |
| 18 | R/W | 1 | DETECT MODE XP_DRIVE_SW setting: 0: TADC_CH6N = 3.3v 1: TADC_CH6N = floating |
| 17 | R/W | 0 | DETECT MODE YM_DRIVE_SW setting: 0: TADC_CH4N = floating 1: TADC_CH4N = GND |
| 16 | R/W | 0 | DETECT MODE YM_DRIVE_SW setting: 0: TADC_CH4N = floating 1: TADC_CH4N = GND |
| 15-10 | R | | Unused |
| 9-7 | R/W | 5 | IDLE MODE ADC MUX setting |
| 6 | R/W | 0 | IDLE MODE VREF_P_MUX setting |
| 5 | R/W | 0 | IDLE MODE VREF_N_MUX setting |

15.2 Temp Sensor

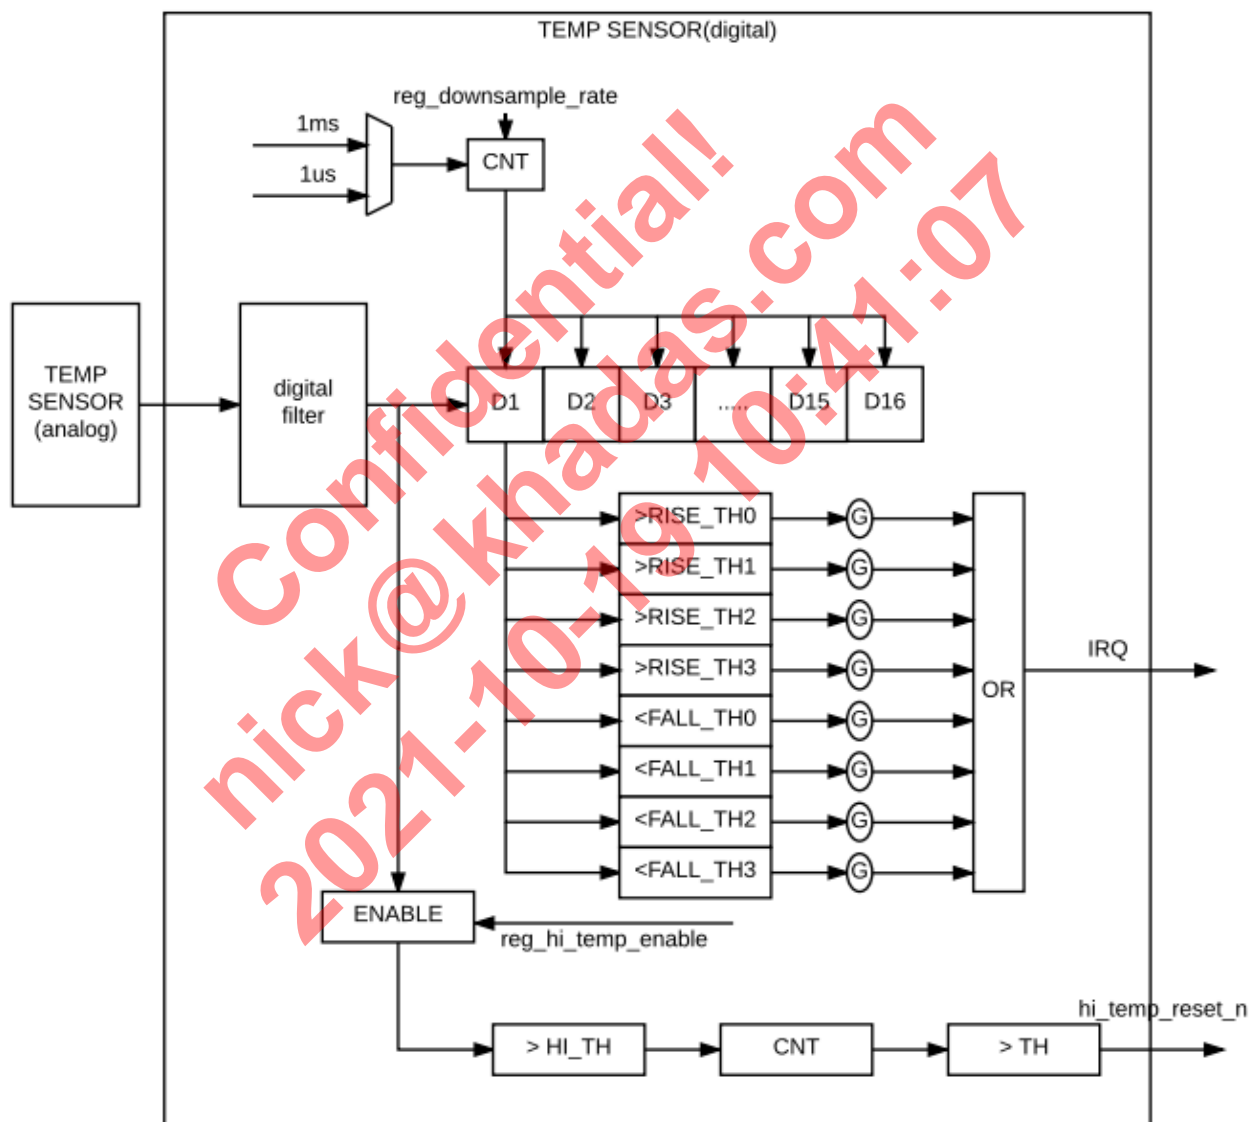

15.2.1 Overview

A311D integrates 2 Temp Sensor, one is close to DDR, one is close to PLL (between CPU and GPU).

Each Temp Sensor are the same design.

1. Capture temperature by programable tick;
2. Store 16 temperature value;
3. Can reset all chip if detect high temperature;
4. Can generate IRQ by 8 threshold;

Figure 15-2 Temperature Sensor Diagram

15.2.2 RegisterDescription

15.2.2.1 Temp Sensor PLL Registers

Base Address: 0xFF634800

Each register final address = module base address+ address * 4

15.2.2.2 Temp Sensor DDR Registers

Base Address: 0xFF634C00

Each register final address = module base address+ address * 4
